Latest Tech News

Sendbird API enables group voice and video calls for any app	Sendbird , a platform that companies such as ServiceNow, Reddit, and Korea Telecom use to embed voice, video, and messaging features into their apps, has updated its application programming interface (API) to support group calls
LogDNA adds browser logging for DevOps teams for web app debugging	LogDNA's new Browser Logger resolves this need by capturing errors and logs on the client and synchronizes them alongside server-side logs, thus allowing developers to understand log data from the browser to effectively debug client-side errors.
Appfire Acquires Atlassian Cloud Apps and Trello Power-Ups from Lizard Brain	"Atlassian makes it possible for developers to build a profitable and successful company by letting them focus on what they do best — coding — while the Atlassian Marketplace helps customers discover your apps.
Announcing Cord Tools, DevOps for Adobe Experience Manager	Cord Tools is an automated DevOps solution for users of Experience Manager, whether they are self-hosted on Adobe Managed Services or using Adobe Experience Manager as a Cloud Service.
Digital avatar startup Genies raises \$65M from Bond, Dapper Labs and Coinbase	Genies is already rolling out its new marketplace and platform to beta users who can test using Giphy's distribution network via a custom integration
CentOS alternative AlmaLinux gets commercial support	Like CentOS, before Red Hat transformed it, AlmaLinux will still be available for free, but if you need Linux support, its parent company CloudLinux will be there for you.
Twitter will now let anyone with 600 or more followers host its audio Spaces on mobile	Twitter also revealed a feature that Clubhouse doesn't have: Twitter plans to offer a way for users to monetize Spaces through ticketing.
Opsera Raises \$15 Million Series A Funding to Lead Continuous Orchestration of DevOps and Software Delivery	Opsera simplifies the set-up, use, and management of commercial and open-source tools across the DevOps ecosystem, and correlates and unifies data to provide contextualized diagnostics, metrics and actionable insights
env0 Extends Infrastructure as Code Automation Platform with Custom Flows	"env0 is focused on increasing DevOps efficiency and control with the addition of Custom Flows, enabling their customers to work with the widest array of tools including Python, G Cloud, Ansible, CloudFormation and more."
