Latest Tech News

Prowly Upgrades Media Monitoring SaaS Tool with Powerful Automation and Data Visualization Features	"The big trend which is impacting not only the PR industry, but the tech world overall, is GPT-3 autoregressive language. It consists of 10x more variables (175B) used to train the model, which allows it to generate human-like text almost impossible to distinguish from an extract written by a real person."
AI research company Anthropic raises \$580M in funding	One of Anthropic's main focus areas is AI safety. The company is developing ways to develop large-scale AI models that have better safeguards and also provide the ability to check the effectiveness of those safeguards.
Hewlett Packard Enterprise Ushers in Next Era in AI Innovation with Swarm Learning Solution Built for the Edge and Distributed Sites	Hewlett Packard Enterprise announced the launch of HPE Swarm Learning, a breakthrough AI solution to accelerate insights at the edge, from diagnosing diseases to detecting credit card fraud, by sharing and unifying AI model learnings without compromising data privacy.
Argent secures \$40M to build crypto 'Super App' for DeFi and Web3	One of Argent's biggest selling points for user adoption is its mobile app, which allows users to store cryptocurrency tokens in what is called a noncustodial wallet without the need to memorize or protect a seed phrase.
Open-source NLP company Deepset nabs \$14M to power 'plain-English' enterprise search	So, while something like Elasticsearch is a well-established keyword-based search engine for enterprises, Haystack allows developers to add NLP-powered semantic search on top of it, one that understands the actual meaning of the query.
Vic.ai debuts AI-powered tool to optimize costs for enterprises	"The spend management insights (from this solution) will help dramatically improve their control over spending across functions and business units."
Seaplane IO lands \$15M for edge-optimized cloud app management	Seaplane is a platform engineering teams can use to build an edge-optimized multi-region, multicloud platform without all the usual overhead and complexity.
Credo AI Announces Responsible AI Governance Platform	Credo AI helps cross-functional teams align on Responsible AI requirements for fairness, performance, transparency, privacy, security and more based on business and regulatory context by selecting from out-of-the-box, use-case-driven Policy guardrails
Qualified.com raises \$95M to transform corporate websites into a sales generation tool	Meanwhile, Qualified for Outbound is designed to help sellers better engage with prospects, while Qualified for ABM helps with converting ad spend.

Analysis, Reports, Trends

AiThORITY - Businesses Need to Consider AI Algorithms and Spatial Intelligence to Increase Success	But what if a business could get enough information about the behavior of its customers — in any number of physical locations pivotal to that organization's success — without having to wait for a lengthy analysis? This is where the difference between basic analytics and spatial analytics comes into play.
SiliconANGLE - Experience as the new up-time: Why automation is the silver bullet to get us there	Network operators are just scratching the surface with network automation, and as technologies and networks continue to evolve and mature, automation will be a critical component in that process to ensure optimized user experiences.
eWeek - The Business Case for an Edge Deployment	According to a recent survey by Quadrant Strategies, 86% of C-suite executives and senior IT decision makers agree that low-latency applications help differentiate their organizations from the competition.
eWeek - Collaboration Platforms Are Critical To Successful Hybrid Work	Collaboration tools were initially considered important, but it is really advanced collaboration tools that have become critical to business success. Advanced collaboration tools feature centralized security and administration, and they provide flexibility for line-of-business workers to configure their own apps/workflows.
VentureBeat - The real cost of cloud computing	Finding the balance between sending the data to the cloud and bringing computing close to data is a trillion-dollar question. The answer is not clear for now, but it's clear that every technology provider and the consumer should start exploring cutting the cloud dependency.
AiThORITY - Blockchain Development Seen as Transformative to the Technology Sector: Rapid Innovation Survey	Several of the top technology firms are exploring everything from launching their own native tokens, to changing their company names to something more metaverse related. Large software firms have created entire enterprise divisions dedicated to enabling data exchange and workflow automation with distributed ledger technology and blockchains
