5/18/2022 1:00 pm CST	Arctic Wolf - Expert Guidance for Enterprise Security Teams
5/19/2022 9:00 am CST	Forcepoint - Using Zero Trust to Eliminate Threats from Untrusted Content
5/26/2022 10:00 am PST	BigLeaf Networks - DDoS Attack Mitigation

Latest Tech News

Arqit Demonstrates Industrial IoT Security	Arqit and Blue Mesh collaborated to integrate Arqit's QuantumCloud™ to secure sensor network equipment through a security enhancement to an internationally standardised protocol known as MQTT which is a ubiquitous method used for sending data from Industrial IoT devices to cloud servers for data manipulation and analysis.
Threat Actors Use Telegram to Spread 'Eternity' Malware-as-a-Service	The new malware service, dubbed the Eternity Project by the threat actors behind it, allows cybercriminals to target potential victims with a customized threat offering based on individual modules they can buy for prices ranging from $90 to $490,
Cisco Releases Cloud Controls Framework to Ease Security Compliance Strain	Cisco recently made public its Cloud Controls Framework (CCF), which aggregates a set of comprehensive international and national security compliance and certification requirements. The vendor claims it allows organizations to achieve cloud security certifications more efficiently.
Governance and administration startup BalkanID launches with $5.75M in funding	The company's solution leverages artificial intelligence and workflow automation to provide visibility into risky entitlements and simplify the access review and certification process. BalkanID's Identity Governance and Administration platform is built for cloud-native environments.
Application security testing startup StackHawk raises $20.7M	StackHawk's solution allows modern software development organizations to extend CI/CD to encompass continuous application and application programming interface security testing. This way, security vulnerabilities are detected while the developer is actively working on the code.
Email security startup Material Security raises $100M on unicorn valuation of $1.1B	The service stops lateral account takeover via email by preventing attackers from hijacking other services. The service adds a verification step before granting access to password resets and other critical messages.
ForgeRock releases AI-driven anti-fraud solution	This flexible authentication process means that legitimate users can log-in without having to undergo lots of authentication steps whereas malicious users or those that act suspiciously will have to undergo more thorough screening measures throughout the login process.
Three suppliers add ransomware capabilities to line-up	Cohesity, Nasuni, and HPE's Zerto all revealed plans to add ransomware protection products and features to their line-ups this week.
Hackers are using tech services companies as a 'launchpad' for attacks on customers	"As this advisory makes clear, malicious cyber actors continue to target managed service providers, which is why it's critical that MSPs and their customers take recommended actions to protect their networks,"

Analysis, Reports, Trends

VentureBeat - The missing link in the cybersecurity market	The market's hyper-segmentation forces security teams to involuntarily become system integrators, investing vast amounts of time and energy into carrying out market analysis, product validation, cross-product integration and product maintenance automation to create a coherent, effective organizational cybersecurity fabric.
SiliconANGLE - Participate in your own rescue: 'Dual ransomware' attack highlights security hygiene urgency	The healthcare provider did not even realize it was being extorted twice because the ransom note of the first attack had been concealed by the second. Two ransomware groups, two different attacks, one target environment, only a week apart.
AiThority - The Security Oracle, Experts in the Security and Artificial Intelligence Space	"TSO's disruptive robotic solution, (RCADS), is the enabling AI technology that makes it possible for Robots in the Sky and TSO's family of robotic appliances to empower organizations to dynamically reconfigure access control and emergency communications systems to adapt to new security threats in sub-second response time,
Threatpost - You Can't Eliminate Cyberattacks, So Focus on Reducing the Blast Radius	The answer is network segmentation. This divides devices and workloads into logical segments with policies providing access controls between them. Just as the watertight bulkheads in a ship prevent a breach in the hull from sinking the vessel, segmentation prevents the lateral movement of malware across your network, preventing it from accessing critical assets.
sdxCentral - CTOs Shouldn't Do Their Jobs Alone, Gartner Says	However, Gartner data shows only 52% of CTOs regularly engage with their organization's CISO, and only 29% regularly engage with their CDO. "There's a clear call to action. If you're going to be involved in investing in cybersecurity and data analytics technologies, you need to be engaging with these kinds of dialogues," she said.
