11/23/2021 11:00 am EST	<a href="#">Veriato - How to Build/Adjust Your Insider Threat Program in Today's World: Social Engineering Edition</a>
11/30/2021 - 12/1/2021	<a href="#">PrivSec Global - A Global Livestream Experience</a>
12/1/2021 10:30 am PST	<a href="#">Lunch &amp; Learn: Exposing Ransomware with Fortinet</a>
1/26/2022 - 1/27/2022	<a href="#">The Rise of Privacy Tech's Data Privacy Week 2022</a>

## Latest Tech News

<a href="#">A new DuckDuckGo tool is supposed to prevent apps from tracking Android users</a>	The company says that although its App Tracking Protection tool isn't a virtual private network (VPN), your device will behave as if it is one. "This is because App Tracking Protection uses a local 'VPN connection' which means that it works its magic right on your smartphone."
<a href="#">Passwordless authentication platform Stytch raises \$90M</a>	Stytch offers passwordless infrastructure via application programming interfaces (APIs) and software development kits (SDKs). Among its products are so-called "magic links" that users click on via their email address, <a href="#">SMS passcodes</a> , <a href="#">WhatsApp passcodes</a> , <a href="#">OAuth logins</a> , and more
<a href="#">Managed detection and response provider Expel raises \$140.3M</a>	MDRs detect intrusions, malware, and malicious activity in a network and assist in response to mitigate those threats, leveraging a combination of analysis and technology.
<a href="#">Social Security numbers stolen in California Pizza Kitchen data breach</a>	Having detected something untoward, California Pizza Kitchen then secured the computing environment and engaged third-party computer specialists to launch an investigation. By Oct. 4, it says, it had confirmed that certain files could have been accessed without authorization.
<a href="#">FBI warning: This zero-day VPN software flaw was exploited by APT hackers</a>	The vulnerability allowed the attackers to gain access to an unrestricted file upload function to drop a webshell for exploitation activity with root access, leading to elevated privileges and potential follow-on activity
<a href="#">Cloud security unicorn Lacework lands record-busting \$1.3B funding round</a>	Its patented Polygraph technology creates a baseline model of activity within a specific organization's computing environment and then looks for patterns that appear to be out of bounds, similar to the way a heart or blood pressure monitor detects deviations from normal levels
<a href="#">Threat intelligence platform DomainTools acquires Farsight Security</a>	"This acquisition enhances our ability to drive mitigation outcomes for our joint customers while accelerating our data science advancements for predictive risk scoring of domain names, hostnames, IP addresses, name servers, and other DNS indicators."
<a href="#">Fortinet Fortifies Microsoft Azure vWAN With SD-WAN, Firewalls</a>	The <a href="#">security</a> vendor claims the integration will enable customers to extend consistent security policies across their WAN whether they're connecting to an on-premises data center, a workload running in Azure, or between clouds.

## Analysis, Reports, Trends

<a href="#">VentureBeat - Report: 54% of today's 'ethical hackers' are Gen Z</a>	<a href="#">The practice of ethical hacking</a> helps root out security vulnerabilities, and in so doing it has become a mainstream vocation that allows diverse individuals to generate <a href="#">a sustainable livelihood</a> from anywhere in the world.
<a href="#">VentureBeat - Report: Only half of companies employ a CISO</a>	According to a new report from managed cloud service provider Navisite, nearly half (45%) of companies surveyed do not employ a chief information security officer (CISO). However, 58% believe they should hire <a href="#">a CISO or CSO</a> .
<a href="#">VentureBeat - Report: 56% of workers admit they've accidentally deleted cloud data</a>	Not only did 56% of those surveyed admit they've accidentally deleted files hosted in the cloud, but as many as one in five said they do so multiple times per week.
<a href="#">VentureBeat - Report: 70% of IT pros say security hygiene has gotten harder over past two years</a>	However, 70% of organizations said they use more than ten security tools to manage <a href="#">security hygiene</a> and posture management, which raises concerns about data management and operations overhead.
<a href="#">VentureBeat - Report: 98% of IT leaders concerned about security challenges due to hybrid workforce</a>	According to a new report by Teradici, 78% of respondents across a range of industries are <a href="#">currently implementing zero trust</a> or are planning to do so in the next two years. VPN is expected to be replaced by remote access and zero trust to best protect corporate assets as hybrid workforces become the norm.
<a href="#">VentureBeat - Top lesson from SolarWinds attack: Rethink identity security</a>	"People need to recognize that, and they don't," he said. "That's my biggest message to people: You've spent a lot of money on identity, but it's mostly how to let the good guys in. You've really got to spend some money on understanding when that identity infrastructure is compromised, and maintaining that infrastructure."
<a href="#">Infoworld - Security is the Achilles' heel of multicloud</a>	Security is top of mind, with only 54% saying they are highly confident they have the tools or skills to pull off multicloud security, and 51% saying they have resisted moving to multiple clouds because of the added security complexities.
