Address Validation in Decisions

# REST Service

The REST Service integration holds configuration data that is shared between REST Service methods in the REST Service such as the base URL, authentication, and any custom headers. Each REST method is an HTTP call that can be made to obtain or send data.

Smartystreet

SmartyStreets is a comprehensive address validation and geocoding platform that helps businesses and organizations ensure the accuracy and reliability of their address data.

With features such as real-time address validation, geocoding, autocomplete suggestions, and easy API integration, SmartyStreets streamlines data entry processes, reduces delivery errors, and enhances overall operational efficiency.

US Address Validation API

HTTP Method :POST
API :https://us-street.api.smarty.com/street-address?
auth-id={}&auth-token={}
