About the Nodegrid v5.2 User Guide

Document updated: September 10, 2022.

All manuals (PDF or HTML format) are available here.

If any features/functions cannot be viewed, user does not have necessary privileges.

This document provides user information and details on the Nodegrid Platform and the supporting units:

- Nodegrid Serial Console Series
- Nodegrid Net Services Router
- Nodegrid Gate SR
- Nodegrid Bold SR
- Nodegrid Link SR

Notifications

USA

WARNING: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his/her own expense.

Canada

This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

European Union

This is a class A product. In a domestic environment, this product may cause radio interference in which case, the user may be required to take adequate measures.

Product Overview

Nodegrid Serial Console

The Nodegrid Serial Console product line consolidates and manages attached devices via a Serial Port Connection including servers, network routers and switches, storage, PDUs, UPSs, and any other device with a serial port.

Nodegrid Serial Console - S Series

The Nodegrid Serial Console (S Series) is designed to fit modern and legacy mixed environment. With auto-sensing ports, the S Series Console Servers can be used within any environment with straight-through cables or legacy adapters.

Features include:

- Auto-Switching (Cisco or Legacy Pin-out)
- 16/32/48/96 Serial Ports
- Additional USB ports

- Factory upgradeable CPU and RAM
- 1U 19" Rack Standard Unit
- Single AC, Dual AC, and Dual DC
- Fan options

Nodegrid Serial Console - S Series Hardware Specifications

Item	Description
СРИ	Intel x86_64 dual core CPU
Memory & Storage	4 GB of DDR3 DRAM 32 GB mSATA SSD
Interfaces	16, 32, 48, 96 RS-232 serial ports on RJ45 @ 230,400 bps max/port 2 Gb (10/100/1000BT) Ethernet interfaces on RJ45 or (optional) 2 SFP+ 1/2.5/10GB compatible 1 RS-232 serial console port on RJ45 1 USB 3.0 Host and 2 USB 2.0 Hosts on Type A connector 1 HDMI output port
Power	40V-63 VDC dual power input (redundant) Power consumption 45 W typical Single or Dual AC: 100-240 VAC, 50/60 Hz
Physical	Front-Rear mounting brackets Size (L x W x H): 443 x 312 x 43 mm (17.4 x 12.3 x 1.7 in), 1U Weight: 4.9 kg (10.8 lb), depending on options Shipping weight: 7.65 kg (17 lb) Shipping (L x W x H): 600 x 440 x 210 mm (23.6 x 17.3 x 8.3 in) F: front-to-back or back-to-front fans (Swappable) B: no fans
Environmental	Operation: 0 to 50° C (32 to 122° F), 5-95% RH, non-cond. Storage: -20 to 67° C (-4 to 153° F), 5-95% RH, non-cond.

Nodegrid Serial Console - S Series Front Interfaces (F: with fan)

Nodegrid Serial Console - S Series Front Interfaces (B: without fan)

Port	Description
HDMI	HDMI Interface
USB	USB 2.0 Port
PWR	Power LED Green:-Solid - normal,- Off - power is off
SYS	System LED Green: Blinking – normal, Fast Blink - RST button Acknowledgment, Off or Solid - no activity
RST	Reset button: <3s system reset,>10s configuration factory reset and system reset
FAN	Fan options: F (with fan), B (without fan)
USB	1 USB 2.0 Port, 12 USB 1.1 Ports

Nodegrid Serial Console - S Series Rear Interfaces

Port	Description
Power	Single or Dual Power Sockets
Serial	Serial Interfaces: Left/Orange DCD/DTR – On (port open and/or cable connected), Off (not ready) Right/Green RX/T- Blinking (data activity), Off (no activity)

Port	Description
ETH0/SFP0	Network Interface Copper:-Left/Green: Blinking (data activity), Solid (ready), Off (no link/cable disconnected Ethernet fault:- Right/Green (1000Base-T link speed), Right/Orange (100BaseT link speed). Right/Off (no link/cable disconnected/Ethernet fault) SFP 1Gb/10Gb:-Left/Green – Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green - 10Gb link speed:-Right/Orange (1Gb link speed),Right/Off (no link/cable disconnected/Ethernet fault)
ETH1/SFP1	Network Interface Copper:·Left/Green: Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green (1000Base-T link speed),·Right/Orange (100BaseT link speed),·Right/Off (no link/cable disconnected/Ethernet fault) SFP 1Gb/10Gb:·Left/Green: Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green (10Gb link speed),·Right/Orange (1Gb link speed),·Right/Off (no link/cable disconnected/Ethernet fault)
Console	Console MGMT Interface Left/Orange (LED Power Failure), Blinking (Power supply failure/off - for dual power supply models), Off (normal) Right/Green (LED System Activity) – Blinking (normal), Off or Solid (no activity)
USB	1 USB 3.0

Nodegrid Serial Console - R Series

The Nodegrid Serial Console (R Series) fits into major hardware environments like Cisco, Arista, Dell, Palo Alto Networks, and Juniper. The R Series Serial Consoles are perfect for retrofits and to upgrade rack standards of existing builds.

Features include:

- For Cisco Pin-out Devices
- 16/32/48/96 Serial Ports
- 1U 19" Rack Standard Unit
- Single AC, Dual AC, and Dual DC

Nodegrid Serial Console - R Series Hardware Specifications

Item	Description	
СРИ	ntel Atom x86_64 dual core @ 1.75 GHz CPU	
Memory & Storage	4 GB of DDR3 DRAM 32 GB mSATA SSD	

Item	Description	
Interfaces	16, 32, 48, 96 RS-232 serial ports on RJ45 @ 230,400 bps max/port. 2 Gigabit (10/100/1000BT) Ethernet interfaces on RJ45 or optionally 2 SFP+ 1/2.5/10GB compatible 1 RS-232 serial console port on RJ45 1 USB 3.0 Host and 2 USB 2.0 Hosts on Type A connector 1 HDMI output port	
Power	40V-63 VDC dual power input (redundant) Power consumption 45 W typical Single or Dual AC: 100-240 VAC, 50/60 Hz	
Physical	Front-Rear mounting brackets Size (L x W x H): 443 x 312 x 43 mm (17.4 x 12.3 x 1.7 in), 1U Weight: 4.9 kg (10.8 lb), depending on options Shipping weight: 9.5 kg (20.9 lb) Shipping (L x W x H): 600 x 440 x 210 mm (23.6 x 17.3 x 8.3 in)	
Environmental	Operation: 0 to 50° C (32 to 122° F), 5-95% RH, non-cond. Storage: -20 to 67° C (-4 to 153° F), 5-95% RH, non-cond.	

Nodegrid Serial Console - R Series Front Interfaces

Port	Description	
НОМІ	HDMI Interface	
USB	2 USB 2.0 Port	
PWR	Power LED Green: Solid - normal, Off - power is off	
SYS	System LED Green: Blinking – normal, Fast Blink - RST button Acknowledgment, Off or Solid - no activity	
RST	Reset button:<3s system reset,>10s configuration factory reset and system reset	

Nodegrid Serial Console - R Series Rear Interfaces

Port	Description		
Power	Single or Dual Power Sockets		
Serial	Serial Interfaces: Left/Orange DCD/DTR – On (port open and/or cable connected), Off (not ready) Right/Green RX/T- Blinking (data activity), Off (no activity)		
ETH0/SFP0	Network Interface Copper:-Left/Green – Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green (1000Base-T link speed), Right/Orange (100BaseT link speed), Right/Off (no link/cable disconnected/Ethernet fault) SFP 1Gb/10Gb:-Left/Green – Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green (10Gb link speed), Right/Orange (1Gb link speed), Right/Off (no link/cable disconnected/Ethernet fault)		
ETH1/SFP1	Network Interface Copper:·Left/Green – Blinking (data activity), Solid (ready), Off:(no link/cable disconnected/Ethernet fault) Right/Green (1000Base-T link speed), Right/Orange (100BaseT link speed), Right/Off (no link/cable disconnected/Ethernet fault) SFP 1Gb/10Gb:·Left/Green – Blinking (data activity), Solid (ready), Off (no link/cable disconnected/Ethernet fault) Right/Green (10Gb link speed), Right/Orange (1Gb link speed), Right/Off (no link/cable disconnected/Ethernet fault)		
Console	Console MGMT Interface Left/Orange (LED Power Failure), Blinking (Power supply failure/off - for dual power supply models), Off (normal) Right/Green (LED System Activity) – Blinking (normal), Off or Solid (no activity)		
USB	USB 3.0		

Nodegrid Serial Console - T Series

The Nodegrid Serial Console (T Series) fits into environments that still utilize legacy devices and can be a direct replacement for any legacy console server.

Features include:

- For Legacy Devices
- 16/32/48/96 Serial Ports
- 1U 19" Standard Unit
- Single AC, Dual AC, and Dual DC

Nodegrid Serial Console - T Series Hardware Specifications

Item	Description	
CPU	Intel Atom x86_64 dual core @ 1.75 GHz CPU	

Item	Description	
Memory & Storage	4 GB of DDR3 DRAM 32 GB mSATA SSD	
Interfaces	2 Gigabit (10/100/1000BT) Ethernet interfaces on RJ45 or 2 SFP+ Fiber interfaces compatible with 1Gb 2.5Gb / 10Gb modules16, 32, 48, 96 RS-232 serial ports on RJ45 @ 230,400 bps max/port 1 RS-232 serial console port on RJ45 1 USB 3.0 Host 2 USB 2.0 Hosts on Type A connector HDMI	
Power	Single/Dual AC 100-240 VAC, 50/60 Hz Dual DC: 40-63 VDC Power consumption 45 W (on 96 ports)

USB	USB 3.0		

Nodegrid Net Services Router Family

The Nodegrid Net Services Router (NSR) is a platform appliance designed for software-defined networking (SDN), out of band (OOB) management, DevOps, cellular failover, docker, SD-WAN, remote/branch offices, retail locations, and network function virtualization (NFV) capabilities.

Nodegrid Net Services Router

The Nodegrid Net Services Router is a modular, open platform appliance designed for software-defined networking (SDN), out of band (OOB) management, DevOps, cellular failover, docker, SD-WAN, remote/branch offices, retail locations, and network function virtualization (NFV) capabilities.

Features include:

- Open Framework, Modular Services Router
- Pluggable Expansion Modules 5 slots available
- Modules for GbE, Serial, SFP+ 10GbE, PoE+, USB, M.2/SATA + Antenna, Storage, Extra Compute
- 1U 19" Standard Unit
- Separation of Control Plane and Data Plane

Nodegrid Net Services Router Hardware Specifications

Item	Description	
СРИ	Intel Multi-core x86_64 CPU	
Memory & Storage	8 GB of DDR4 DRAM (Upgradeable) 32 GB FLASH (mSATA SSD) (Upgradeable) Self-Encrypted Drive (SED)	
Interfaces	2 SFP+ Ethernet 2 Gigabit Ethernet 1 RS-232 serial console port on RJ45 1 USB 3.0 1 USB 2.0 1 HDMI	
Power	Dual AC 100-240 VAC, 50/60 Hz or Dual DC 36-75 VDC Power Consumption 90W-150W typical	
Physical	Front-Rear mounting brackets Size (L x W x H): 438 x 332 x 43mm (17.2 x 13.1 x 1.7 in), 1U Weight: 4.9 kg (10.8 lb), depending on options Air Exhaust or Air Intake Fans (Swappable)	
Environmental	Operation: 0 to 45° C (32 to 113° F), 5-95% RH, non-cond. Storage: -20 to 67° C (-4 to 153° F), 10-90% RH, non-cond.

Power	Single or Dual Power Sockets	

Nodegrid Net Services Router Expansion Modules

The Nodegrid Net Services Router has up to five slots for modules that provide extreme flexibility and expanded functionality.

Nodegrid Net Services Router Expansion Modules

Module	Image	Specification
16-Port 1GbE		1000BASE-T Cat5e or better
16-Port SFP 1GbE		Supports all SFP Modules

Module	Image	Specification
8-Port SFP+ 10GbE	D-00-00-05-0	Supports all SFP+ Modules
8-Port PoE+		25.5W mapower per port Total ma150W PoE+ available Configurable power budget
16-Port Serial		RJ45 Serial Rolled port ma230,400 bps
16-Port USB		USB 2.0 interfaces Type A
M.2 Cellular + Antenna	0 0 0 0	For up to 24G/LTE modems
M.2 SATA		For up to 2mSATA storage modules
Storage	CHIEFE THE PARTY.	For 2.5" SATA (HDD/SDD) storage
Compute		Compute module (server on a card), provides independent compute capabilities.

8-Port SFP+	√	√	√	Secure Isolated Mode **	Secure Isolated Mode **
8-Port POE+	✓	✓	√	_	_
Compute	√	√	√	Secure Isolated Mode **	Secure Isolated Mode **
Storage *	_	_	_	✓	✓
M.2 SATA *	_	_	_	✓	✓

NOTES:

- (*) The Nodegrid Net Services Router supports a maximum of 2 SATA drives, which can be divided into 2 Storage cards or in one M.2 SATA card.
- (**) The Secure Isolated Mode allows for the management of the cards as if they would be located in a normal Slot, but the network traffic is isolated from any other slot.

Configure Extra Storage Devices on NSR

IMPORTANT: When additional storage is added, special steps are required to allow the system to see more than one disk (i.e., use both storage and an LTE/M2.SATA module).

If using Storage and LTE/M2.SATA:

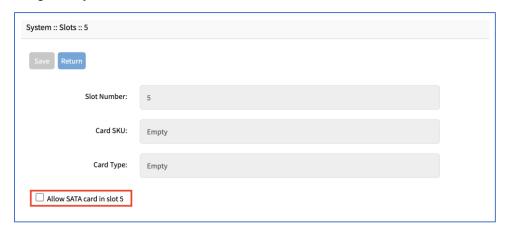

LTE/M2.SATA must be installed in slot 4.

Storage module must be installed in slot 5.

M2.SATA must be installed in Channel A.

Modem must be installed in Channel B.

1. In the WebUI, go to System :: Slots :: 5.

- 2. Select Allow SATA card in slot 5 checkbox.
- 3. Click Save.

Nodegrid Gate SR

The Nodegrid Gate SR brings agility to any network. Perfect for both data center and branch, Nodegrid Gate SR packs tremendous power in a small form factor – to provide a truly robust and dynamic, secure infrastructure management solution. Configuration and management of the Nodegrid Gate SR is easily done on the ZPE Cloud application.

Features include:

- Secure, fast, and consistent deployments across all your branches with ZPE Cloud
- Software Defined Networking, Network Function Virtualization, Guest OS, Kubernetes, and Docker capabilities
- Minimizes MTTR, downtime and expenses with secure, centralized remote device access & control
- Increases site reliability with open industry standard hardware and easy-to-use software
- Zero Touch Provisioning (ZTP) for fast and easy setup in remote locations
- Integrates with ZPE Cloud and ZPE Systems Nodegrid Manager for a vendor-neutral, unified management solution
- Direct Linux shell, HTML5 cross-device web access, and command line interface
- Modern 64-bit Linux Kernel for fast security patching and widespread software availability
- Kubernetes and Docker-optimized for quick, flexible script and application integration
- Extended Automation based on actionable real-time data
- Failover to 4G/LTE modem

- Gateway and multi-routing table capability
- VPN and IPsec
- DHCP server extra IPs for your remote site or replace your current router altogether
- Firewall built-in and turns on with a check box
- Secure selectable encrypted cryptographic protocols and cipher suite levels, and a configuration checksum™
- Power control and monitoring get alerts on suboptimal IT device health before malfunctions occur and solve problems automatically
- Orchestration Puppet, Chef, Ansible, RESTful and ZPE Cloud
- WiFi hotspot ready via internal card or add your AP (Access Point) via a PoE+ port
- High density and flexible interfaces for greater connectivity

Nodegrid Gate SR Hardware Specifications

Item	Description
CPU	Intel Multi-core x86_64 CPU
Memory & Storage	8-32GB DDR4 DRAM 32GB Hardware encrypted SSD

Nodegrid Hive SR

The Nodegrid Hive SR is used for SD-WAN and SD-Branch applications.

NOTE; Hive SR default system profile is Gateway Profile.

Features include:

- Three M.2 slots for flexible combinations of up to Wifi 6, 5G and NVMe drives
- Four SIM card slots for up to two cellular modems
- Four RJ-45 Network Ports (2.5G)
- Two SFP+
- Two 1GbE Combo (RJ45/SFP)
- +12V DC power
- Fan-cooled
- Rack or wall mountable
- Five antenna slots.
- Zero Touch Provisioning (ZTP) for fast and easy setup in remote locations

• Integrates with ZPE Cloud and ZPE Systems Nodegrid Manager for a vendor-neutral, unified management solution

Antenna Connection	(optional) WiFi Antenna
DC Power Adaptor	12VDC for External Power Supply

Nodegrid Bold SR

The Nodegrid Bold SR is an open platform appliance designed for secure access and control over remote and IoT devices at the EDGE of your network. The Bold SR supports cellular failover, Network Function Virtualization (NFV), and Software Defined Networking with a focus on SD-WAN.

Features include:

- 1U high, compact size, high processing power
- Ideal for Software Defined Networking
- Network Function Virtualization
- Cellular failover
- WiFi hotspot & client
- Multiple Interfaces

Nodegrid Bold SR Hardware Specifications

Item	Description
CPU	Intel Multi-core x86_64 CPU

Nodegrid Link SR

The Nodegrid Link SR brings agility to the branch network and packs tremendous power in a compact design. Truly robust and dynamic, secure infrastructure management. Configure and manage Link SR via the ZPE Cloud to get your Branch / IoT / M2M / Kiosk / ATM / Remote Locations up and running quickly and easily.

Features include:

- Secure, fast and consistent deployments across your branches with the ZPE Cloud
- Combines Cellular gateway and WiFi Access Point (AP) with power input via PoE or Power Adapter
- Software Defined Networking, Network Function Virtualization, Guest OS, Kubernetes, and Docker capabilities
- Minimizes MTTR, downtime and expenses with secure, centralized remote device access & control
- Increases site reliability with open industry standard hardware, and easy-to-use software

- Zero Touch Provisioning (ZTP) for fast and easy setup in remote locations
- Integrates with ZPE Cloud and ZPE Systems Nodegrid Manager vendor-neutral, unified management solution
- Direct Linux shell, HTML5 cross-device web access and command line interface
- Modern 64-bit Linux Kernel for fast security patching and widespread software availability
- Kubernetes and Docker-optimized for quick, flexible script and application integration
- Extended Automation based on actionable real-time data
- Failover to 4G/LTE modem
- Linkway and multi-routing table capability
- VPN and IPsec
- DHCP server extra IPs for your remote site or replace your current router altogether
- Firewall built-in and turns on with a checkbox
- Secure selectable encrypted cryptographic protocols and cypher suite levels, configuration checksum™
- Power control and monitoring get alerts on suboptimal IT device health before malfunctions occur and solve problems automatically
- Orchestration Puppet, Chef, Ansible, RESTful and ZPE Cloud
- High density and flexible interfaces for greater connectivity

Nodegrid Gate Services Router	Yes	Optional External Power Supply	Cisco	Z000014	Yes	Yes

Each unit is shipped with multiple accessories. The table below lists the contents of the box.

Installation of Modules for Nodegrid Net Services Router

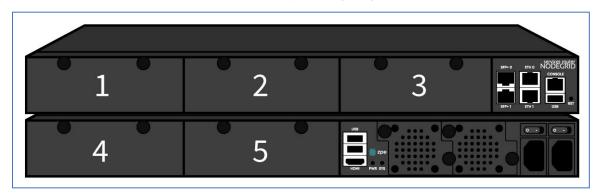

The Nodegrid Net Services Router supports a variety of different modules. All modules are not hotswappable and need to be installed before the unit is powered up. The modules should be installed in an ESD protected environment to avoid damage. To install a card, please follow the steps below:

- 1. Ensure that the Nodegrid Net Services Router is powered off.
- 2. Turn off the power supplies on the Nodegrid Net Services Router.
- 3. Unscrew the blanking panel which covers the slot in which the module should be installed.
- 4. Unbox the card and insert it into the appropriate slot.
- 5. Fix the card with the provided screws.
- 6. The Nodegrid Net Services Router can now be turned on.

NOTE: The blanking panel should be kept for later use. For thermal efficiency and safety, each unused slot needs to be covered with a blanking panel.

Module Compatibility Layout

Nodegrid Net Services Router Expansion Module Compatibility Chart

Expansion card	Slot 1	Slot 2	Slot 3	Slot 4	Slot 5
16-Port GbE Ethernet	✓	✓	√	Secure Isolated Mode **	Secure Isolated Mode **
16-Port SFP	✓	✓	√	Secure Isolated Mode **	Secure Isolated Mode **
16-Port Serial	√	√	√	✓	✓
16-Port USB	✓	✓	√	✓	✓
M.2 Cellular / WiFi	√	√	√	✓	✓
8-Port SFP+	✓	✓	√	Secure Isolated Mode **	Secure Isolated Mode **
8-Port POE+	✓	✓	√	_	-
Compute	√	√	√	Secure Isolated Mode **	Secure Isolated Mode **
Storage *	_	_	_	✓	✓
M.2 SATA *	_	_	_	✓	✓

NOTES:

- (*) The Nodegrid Net Services Router supports a maximum of 2 SATA drives, which can be divided into 2 Storage cards or in one M.2 SATA card.
- (**) The Secure Isolated Mode allows for the management of the cards as if they would be located in a normal Slot, but the network traffic is isolated from any other slot.

M.2 Cellular Antenna Placement

Correct antenna placement is critical to ensure proper functionality of the M.2 Cellular expansion card. Two antennas (main and auxiliary) are required for each card and should be separated to improve signal quality.

Single Card Configuration

For single card applications, antenna placement is as follows:

Channel A

Main in slot 1

Auxiliary in slot 6

The A and B channel strength indicators do not directly correspond to the antenna slot positions (Slots 4-6 are not specifically reserved for channel B).

Dual Card Configuration

For dual card applications, four antennas (2 main and 2 auxiliary) will be used. Antenna placement is as follows:

Channel A

Main in slot 1

Auxiliary in slot 4

Channel B

Main in slot 3

Auxiliary in slot 6

Device Power Connections

DC Power

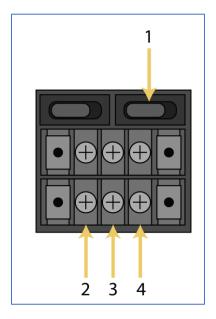

DC power is connected to DC-powered equipment with three wires: Return (RTN), Ground and 48 VDC.

WARNING: It is critical that the power source supports the DC power requirements of your Nodegrid. Make sure that the power source is the correct type and that the DC power cables are in good condition before proceeding. Failure to do so could result in personal injury or damage to the equipment.

WARNING: Wiring to power from a DC supply may be confusing, especially in telecom racks, where the supply's positive wire (usually of red color) goes to the ground, and the hot wire (usually of black color) carries the -48VDC. In case of any doubt, consult a certified electric technician before proceeding with connections. Failure to do the right connections could result in personal injury or damage to the equipment.

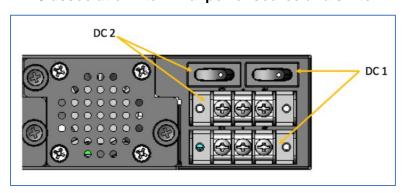

Dual DC Power Connection Terminal Block

DC Power Block Terminals

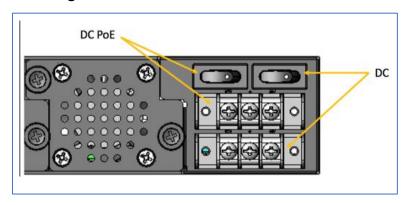

Number	Description	
1	wer Switch	
2	RTN (Return)	
3	Ground	
4	48 VDC	

DC association - terminal power source and switch

NSR Single DC + PoE Power Connection Terminal Block

Connect a Nodegrid device to DC Power

- 1. Make sure the device is turned off.
- 2. Make sure DC power cables are **not** connected to a power source. **Never work on powered wires.**
- 3. On the DC power block, remove the protective cover. (Slide to the left or right to remove.)
- 4. Loosen all three DC power connection terminal screws.

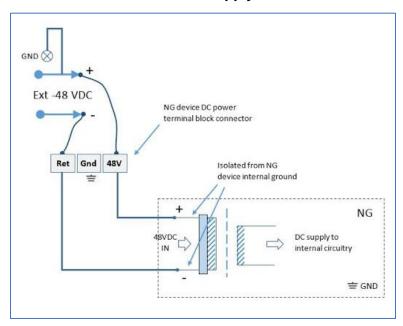

Connect return lead to the RTN terminal.

Connect 48 VDC lead to the 48 VDC terminal.

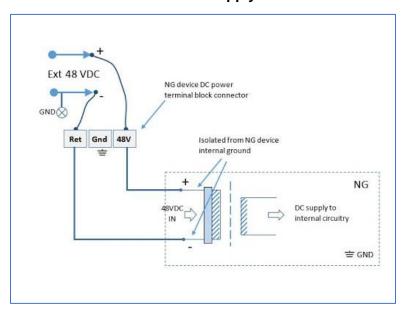

- 5. Tighten the screws.
- 6. Slide the DC terminal block protective cover back into place.
- 7. If device has dual-input DC terminals, repeat DC power connection steps for the second terminal block.
- 8. Connect the DC power cables to the DC power source.
- 9. Turn on the DC power source.
- 10. (optional) Connect a serial client (set as 115200 8N1) to the console port (Teraterm, puTTY, etc).
- 11. Turn power on to the serial client.
- 12. On the connected serial client, double-check booting messages.
- 13. For the connected devices, turn on the power switches.
- 14. Connect the DC power cables to the DC power source.
- 15. Turn on the DC power source.
- 16. Turn on the unit.
- 17. Turn on the power switches of the connected devices.

-48VDC supply

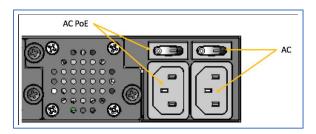

+48VDC supply

AC Power

This is the AC diagram for the NSR models with PoE+ support.

Rack Mounting

All units shipped with rack mounting brackets can be mounted to fit a standard 19" rack. Two rack mounting brackets are provided in the box as outlined in the What is in the box section. The remainder of this document will refer to "rack or cabinet" as "rack".

Some units are actively cooled by fans. These units must be properly mounted into the rack to ensure the fans blow into the correct direction. The fan direction can be determined from the part number of the unit.

Rack Mounting

Model	Part Number	Cooled	Airflow
Nodegrid Serial Console - T Series	NSC-Txx-xxxx-xxx	Passive	N/A
Nodegrid Serial Console - R Series	NSC-TxxR-xxxx-xxx	Passive	N/A
Nodegrid Serial Console - S Series	NSC-TxxS-xxxx- xxx-F	Active	Front-Back (air in)
Nodegrid Serial Console - S Series	NSC-TxxS-xxxx- xxx-B	Active	Back-Front (air out)
Nodegrid Net Services Router	NSR-xxxx-xxx	Active	Front-Back (air out)
Nodegrid Net Services Router	NSR-xxxx-xxx	Active	Back-Front (air in)
Nodegrid Bold Services Router	BSR-xx-xxxx	Passive	N/A
Nodegrid Link Services Router	LSR-xx-xxxx	Passive	N/A
Nodegrid Gate Services Router	GSR-xx-BASE	Passive	N/A

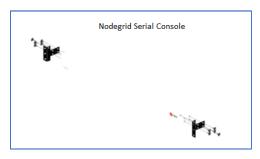

Model	Part Number	Cooled	Airflow
Nodegrid Gate Services Router	GSR-xx-UPGx	Active	Front-Back (air out)

Rack Installation

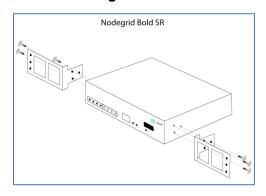

1. Install the rack mounting brackets with the provided screws as shown in the diagrams below

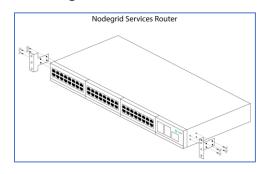

Nodegrid Serial Console

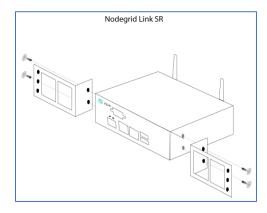

Nodegrid Bold SR

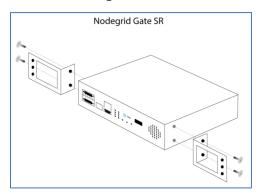

Nodegrid Net Services Router

Nodegrid Link SR

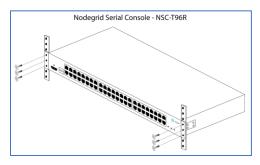

Nodegrid Gate SR

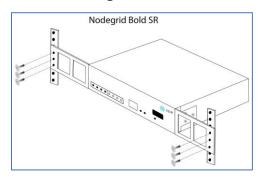

- 2. Locate the position on the rack where you would like to mount the unit and ensure the slot is clear of any obstructions.
- 3. Slide the unit into the rack and align the mounting bracket screw holes with the screw holes on the rack as shown below:

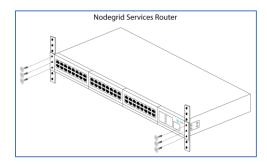

Nodegrid Serial Console

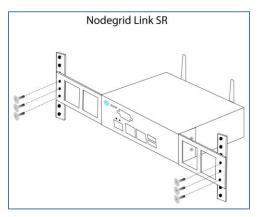

Nodegrid Bold SR

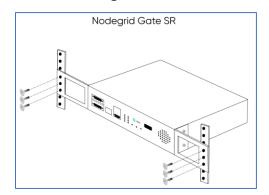

Nodegrid Net Services Router

Nodegrid Link SR

Nodegrid Gate SR

- 4. While holding the unit in position, insert the rack mount screws (not included) and turn them clockwise until they are snug, but not tight.
- 5. Once all the screws are installed, check to ensure that the unit is supported and still in the correct position.
- 6. Tighten the screws securely in place to complete the installation.

Network Connection

Depending on the model and version, the unit has a minimum of two copper Ethernet ports or two SFP+ ports. Connect the proper network cables (CAT5e, CAT6, CAT6A) from the network switch port to any available unit network ports. For models with SFP+ ports, before the unit is turned on, install the SFP+ module and connect the appropriate cables.

Power Cord(s) Connection

The Nodegrid unit can have one or multiple power supplies (AC or DC). Connect all the power supplies with appropriate cables to an available power source (usually a Rack PDU. If the unit was shipped with one power supply, that unit has no power failure redundancy. Units with two power supplies provide redundancy against power failures. Make sure these power supplies are connected to two independent power sources.

NOTE: On the Nodegrid Net Services Router with PoE support, the second power supply specifically powers the PoE feature – and does not provide power outage redundancy.

When all power supplies are appropriately connected to a power source, power can be turned on.

Connect Target Devices

Serial Target Devices

NOTE: To avoid EMC issues, always use good quality network cable for all port connections.

The cabling and adapters needed between the unit serial ports and the serial devices' console port are determined by their pin-outs.

Newer serial devices (routers, switches, and servers) use either a DB9, RJ45 or USB port as console ports. See the manufacturer's manual for serial device port pin-out specs. Generally, the RJ45 console port uses the Cisco-like pin-out.

Required Cabling Ports/Pin-outs

Model	Port type	Pin-out	Device port - RJ45 (Legacy)	Device port - RJj45 (cisco)	Device port - DB9	Device port - USB
Nodegrid Serial Console - T Series	RJ45	Legacy	CAT5e cable	CAT5e cable plus Z000039 crossover adapter	CAT5e cable plus Z000036 crossover adapter	USB
Nodegrid Serial Console - R Series	RJ45	Cisco	-	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB
Nodegrid Serial Console - S Series	RJ45	Auto- Sensing (Legacy/C isco)	CAT5e cable	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB

Model	Port type	Pin-out	Device port - RJ45 (Legacy)	Device port - RJj45 (cisco)	Device port - DB9	Device port - USB
Nodegrid Net Services Router	RJ45	Cisco	-	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB
Nodegrid Bold Services Router	RJ45	Cisco	-	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB
Nodegrid Link Services Router	RJ45	Cisco	-	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB
Nodegrid Gate Services Router	RJ45	Cisco	-	CAT5e cable	CAT5e cable plus Z000015 crossover adapter	USB

If the serial device's RJ45 does not have the Cisco-like pin-out, or there is a question on connecting a serial device to the unit, contact <u>ZPE Systems Technical Support</u> for assistance.

IP Target Devices

NOTE: To avoid EMC issues, always use good quality network cable for all port connections.

All IP based target devices are directly connected to a network interface on a Nodegrid unit, or connected through an existing network infrastructure. If the target devices are directly connected, use standard network cables (CAT 5, CAT6, CAT6e) for Ethernet connections, or an appropriate fiber cable.

Connect to a Nodegrid Device

On the first connection to a Nodegrid device, the login prompt requires an immediate password change.

NOTE: On new devices, SSH is disabled by default.

Connect to the Console Port

Use the provided CAT5e and RJ45-DB9 Z000036 adapter/cable to communicate with the Nodegrid unit.

- 1. Connect one end of the CAT5e cable to the Nodegrid console port.
- 2. Connect the other end to the RJ45-DB9 adapter.
- Plug the adapter into the PC's DB9 COM port.
 If no DB9 COM port, use a USB-DB9 adapter (not provided).
- 4. On the PC, use a serial application (Xterm, TeraTerm, PuTTY, SecureCRT) to open a terminal session to the COM port:
- 5. Set it to: 115200bps, 8 bits, no parity, 1 stop bit, no flow control settings.

NOTE: See system information to find the COM port.

ETH0 Connection

By default, the ETH0 interface is configured to listen for DHCP requests. If no DHCP Server is available, the unit uses the default IP address: 192.168.160.10. Use a browser to access the unit: https://[DHCP ASSIGNED IP] or https://192.168.160.10. If needed, a SSH client can be an alternative access.

Connection through ETH0

Setting	Value	
DHCP	enabled	
Fall-back IP	yes	
Default IP	192.168.160.10/24	
Default URL	https://192.168.160.10	
Default SSH	SSH admin@192.168.160.10	
DHCP	enabled	

WiFi Connection

The Nodegrid device is pre-configured to act as a WiFi hotspot with a built-in WiFi module or a USB WiFi adapter. When turned on, the device automatically presents a WiFi network with the SSID = **Nodegrid**. The password is the device's serial number.

The Nodegrid device provides the IP address to clients in the network 192.168.162.0/24. The client can be configured statically with a valid IP address in the 192.168.162.<2-254> range, bitmask 24.

Bluetooth® Connection

Zero Touch Provisioning (ZTP) via Bluetooth allows faster deployment, even when the network infrastructure is not in place. The only additional equipment needed is a smartphone or laptop with Bluetooth tethering enabled.

On Nodegrid devices configured with Bluetooth hardware, this is enabled by default. Bluetooth is enabled/disabled via the **Security** tab or **Network Settings**.

NOTE: For devices without Bluetooth, configure an adapter. Contact ZPE Support for the latest list of compatible adapters.

To connect via Bluetooth:

- 1. On your smartphone or laptop, enable tethering.
- 2. On the Bluetooth screen, locate and click on the new Nodegrid device.
- 3. Once paired, Nodegrid connects to the ZPE Cloud and automatically begins the ZTP process.

KVM Port Connection

The Nodegrid unit can be directly configured with KVM.

1. Connect a HDMI cable to the monitor and the device's HDMI interface.

NOTE: The Nodegrid Bold SR uses a VGA port. If monitor only has HDMI, use a HDMI to DVI-D adapter to connect.

2. Connect a USB Keyboard and Mouse to the USB ports.

NOTE: The keyboard and mouse must support Linux. Windows-only devices are not supported. This limitation generally affects devices which use a USB wireless dongle.

3. The login prompt indicates the connection is active.

I/O Ports (GPIO)

Nodegrid Gate SR supports two digital I/O ports (DIO0, DIO1), one digital output port (OUT0) and one relay port (1A@24V).

Nodegrid Link SR supports two digital I/O ports (DIO0, DIO1) and two digital output ports (OUT0, OUT1).

DIO0 and DIO1 can be independently configured as input or output. The DIO0 and DIO1 are opendrain digital I/O ports with TTL level (5.5V max @ 64mA). ESD protection exceeds JESD 22.

When DIO port is configured as input:

contact is open, senses High (1)

contact is closed, senses Low (0)

NOTE: DIO0 and DIO1 port configuration as input is ideal for dry contact applications (door close, vibration, water, smoke sensors).

When DIO port is configured as output:

set to high, outputs TTL high

set to low, outputs TTL low

NOTE: DIO0 and DIO1 port configuration as output can control low voltage/current applications.

The OUT0 and OUT1 are high voltage digital outputs. Each port is internally attached to a Signal MOSFET. The output port is normally open (NO) and capable of supporting a voltage range from 2.5V to 60V @ 500mA.

When OUT port is set to:

High (enabled/active and pulls OUT to ground)

Low (disabled/inactive and keeps OUT open)

NOTE: OUT0 and OUT1 can pull a power-connected line to ground (i.e., relay circuit).

On Nodegrid Gate SR, the RELAY port is normally a closed (NC) relay (rated max value of 24V @ 1A). The RELAY specification supports a maximum switching power of 60W, 125VA; maximum switching voltage of 220VDC, 250VAC; maximum switching current of 2A, with restive load.

The RELAY's primary function is a Power Source Control Alarm. When closed, it indicates that Nodegrid Gate SR is powered by a single power source or has no power. If the Nodegrid Gate SR is powered by both power input sources, when RELAY is closed, it indicates a FAILURE on at least one power input sources.

(optional), RELAY can be changed to follow software control (Open / Close), to control an external device. Possible relay states are:

open (opens relay contact)

close (closes relay contact)

The I/O Port configuration is under *System :: I/O Ports*. I/O Port status and other hardware details is under *Tracking :: HW Monitor*.

WARNING! For Safety Reasons, do not exceed max voltage or current defined on each port.

Import / Export Configuration

The CLI can import the entire (or partial) Nodegrid configuration.

Import Configuration Settings

import_settings [arguments]

where arguments can be:

- --file <local-pathname> (local file input)
- --overwrite-tables (overwrite table when its configuration is given)
- --quiet (suppress report of success/failure per path, just output final counters)

NOTE: In interactive mode (no --file given), the lines can be typed or copied/pasted. Enter **<ctrl>D** to finalize.

Export Configuration Settings

export_settings [cli-path] [arguments]

where arguments can be:

- --with-options (provide a list of choices for value)
- --include-empty (generate parameter line even if no value)
- --not-enabled (generate parameter line even if parameter not active)
- --plain-password (plain/hash password)
- --file <local-pathname> (output to a local file)

Nodegrid Manager Installation

Install Nodegrid Manager from an ISO file. This is the three-step process:

- 1. Create a virtual machine.
- 2. To install, boot from the ISO file/CD.
- 3. Restart and boot from the new virtual machine.

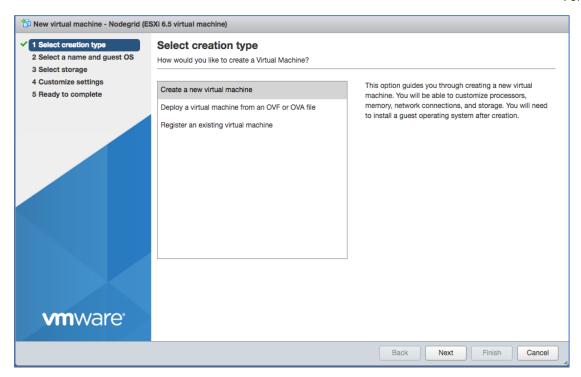

Minimum Requirements:

- ESXi 4.1 or above
- 32 GB hard drive (connected through the LSI Logic Parallel Controller)
- 4 GB memory (8GB is recommended)
- 2 Network adapters (E1000 adapters are recommended)

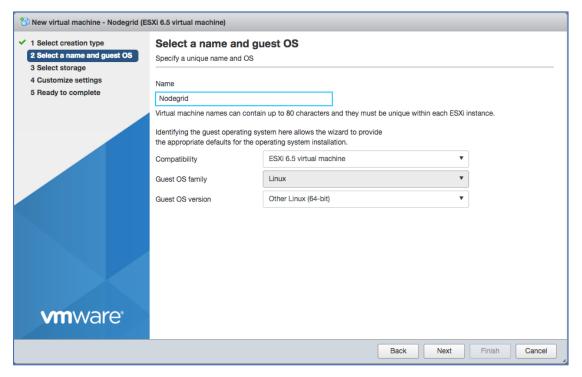

Create a VMware Virtual Machine

- 1. On the ESXi vSphere application, click **Create a new virtual machine**.
- 2. On the Create a new virtual machine dialog, click Next.

3. On Select a name and guest OS dialog:

Enter Name for the Nodegrid Manager virtual machine.

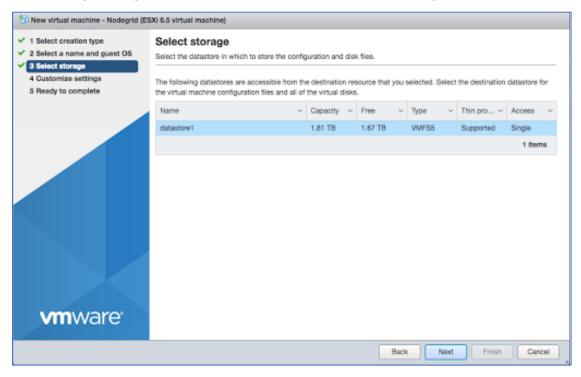

For Guest OS family, select Linux.

For Guest OS version, select Other Linux (64-Bit).

Click Next.

4. On Select storage dialog table, select the virtual machine's data storage volume. Click Next.

5. On the *Customize settings* dialog, enter these settings (these are minimum settings – adjust as needed). Then click **Next**.

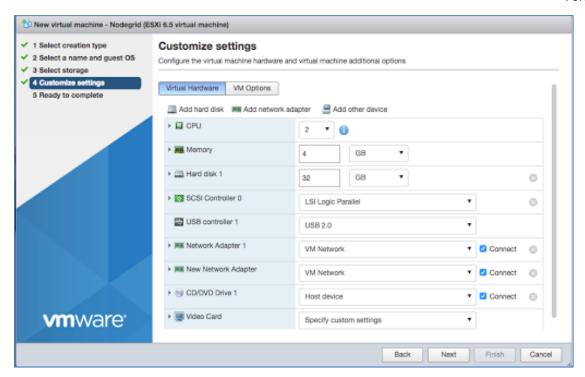

CPU: 2

Memory: 4GB

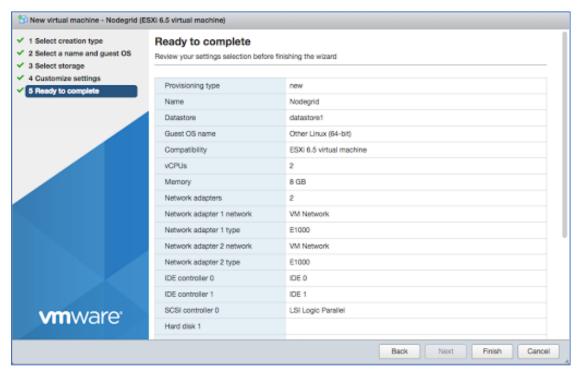

Hard disk: 32GB

SCSI Controller: LSI Logic Parallel **Network adapters**: 2 of type E1000

6. On the Ready to complete dialog, review the details. Click Finish

This completes the virtual machine configuration on the ESXi server.

Install Nodegrid Manager

To install the software:

- 1. On the virtual machine *Summary* screen, click the **Console** tab.
- 2. Turn on power to the virtual machine. Because there is on installed OS, the boot will fail.
- 3. Click on the CD/DVD icon and locate the Nodegrid Manager ISO file.
- 4. In the Console area, click CTL-ALT-INSERT. This reboots the virtual machine.
- 5. The virtual machine console server opens with a boot prompt. The image is decompressed and then loaded.
- 6. When the image boots, follow the console instructions. To accept the EULA, type accept.

```
NodeGrid Boot live

http://нын.zpesystems.com

To proceed with installation you must accept the License Agreement.

Туре 'view' to read the License Agreement or 'accept' to agree with it: accept_
```

7. When complete, the virtual machine reboots.

8. On reboot, the Nodegrid Manager application is ready to be configured.

Enroll Nodegrid Manager to ZPE Cloud

WebUI Procedure

- 1. Log into ZPE Cloud.
- 2. For enrollment information, go to SETTINGS :: ENROLLMENT:: CLOUD.
- 3. Locate the device, and open the WebUI.

4. Go to Security :: Services and select Enable ZPE Cloud checkbox.

To enroll the device in one on-premise instance of ZPE Cloud, select **Enable Remote Access** checkbox.

- 5. Make other changes, as needed.
- 6. Click Save.
- 7. To enroll device, go to System :: Toolkit and click Cloud Enrollment. Enter Customer Code and Enrollment Key.

To enroll the device in one on-premise instance of ZPE Cloud, enter **On-premise URL**.

Click ENROLL.

CLI Procedure

- 1. Log into ZPE Cloud.
- 2. For enrollment information, go to: SETTINGS :: ENROLLMENT :: CLOUD.

Open the vSphere Client.

On the Menu dropdown, select Hosts and Clusters.

On the Hosts and Clusters list, select the Nodegrid Manager VM

- 3. Click Launch Web Console.
- 4. On the CLI, enter admin credentials.
- 5. To enable ZPE Cloud, enter:

```
cd settings/zpe_cloud
set enable zpe cloud=yes
```

To enable the remote access feature, enter:

```
set enable_remote_access=yes
commit
```

6. To complete, enter:

commit

Initial Network Configuration

The Nodegrid Platform can be accessed through a console port in HTTPS (web interface) or SSH (CLI). Other methods can be enabled later.

By default, the Nodegrid Platform is set up with DHCP IP configuration enabled.

NOTE: If the device's DHCP server fails or is unavailable, the Nodegrid Platform respond on ETH0 at 192.168.160.10

Access the CLI Window

On the Nodegrid Platform's CLI window, after the boot messages, the login prompt is displayed.

Admin user:

Initial username = admin

Initial password = **admin** (after first login, default password must be changed)

Super User:

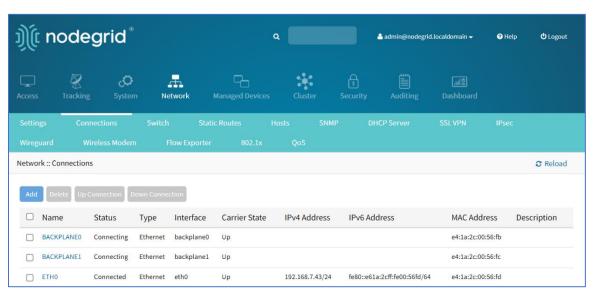

Username = root (SHELL access to Linux OS, but not web interface)

Default password = root

Identify Current IP Address

WebUI Procedure

- 1. Use admin login to device's Nodegrid Platform.
- 2. Go to Network :: Connections.

3. Review assigned IP addresses (save for later use).

CLI Procedure

- 1. Log into device as admin.
- 2. Enter:

show /system/network_connections/

Example output:

```
BACKPLANEO connected ethernet eth0 up 192.168.10.252/24 fe80 :: 290:fbff:fe5b:72bc/64 e4:1a:2c:5b:72:bc ETH0 connected ethernet backplane0 up 192.168.29.3/24 fe80 :: 290:fbff:fe5b:72bd/64 e4:1a:2c:5b:72:bd hotspot not active WiFi down
```

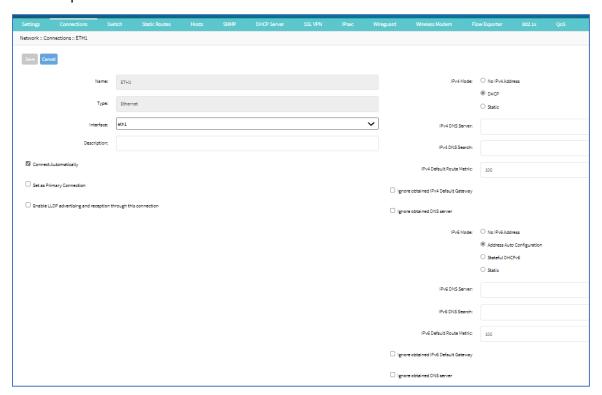

Define Static IP Address

If no DHCP server is available on your network, or to change from a dynamic to static IP, configure the network parameters.

NOTE: The examples below use IPv4 for communication. IPv6 is fully supported on the Nodegrid Platform. Settings are available in the same menus.

WebUI Procedure

- 1. Go to Network :: Connections.
- 2. Click on the Interface to be configured (displays *Network Connections* dialog for the .interface).
- 3. Enter the required details.

4. Click Save.

CLI Procedure

1. Go to the desired network Interface:

cd settings/network_connections/ETH0/

2. Configure the Network interface:

```
set ipv4_mode=static
```

©2022 ZPE Systems, Inc.

set ipv4_address=<IP_ADDRESS> ipv4_bitmask=<BITMASK> ipv4_gateway=<GATEWAY>
commit

Example:

```
[admin@Nodegrid /]# cd settings/network_connections/ETH0/
[admin@Nodegrid ETH0]# set ipv4_mode=static
[admin@Nodegrid ETH0]# set ipv4_address=10.0.0.10 ipv4_bitmask=24
ipv4_gateway=10.0.0.1
[admin@Nodegrid ETH0]# show
name: ETH0
type: ethernet
ethernet_interface = eth0
connect automatically = yes
set_as_primary_connection = no
enable_1ldp = no
ipv4_mode = static
ipv4 address = 10.0.0.10
ipv4\_bitmask = 24
ipv4_gateway = 10.0.0.1
ipv4_dns_server =
ipv4_dns_search =
ipv6_mode = address_auto_configuration
ipv6_dns_server =
ipv6_dns_search =
[admin@Nodegrid ETH0]# commit
```

3. Follow the same steps for other interfaces.

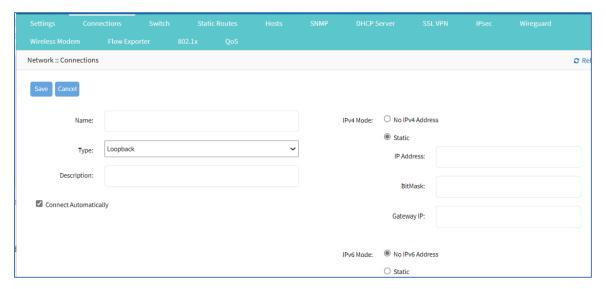

Configure Loopback Address

WebUI Procedure

Multiple loopback addresses can be created with assigned IP addresses from within Network :: Connections.

- 1. Go to Network :: Connections.
- Click Add (displays dialog).
- 3. On **Type** drop-down, select **Loopback** (modifies the UI).

- 4. Enter required details.
- 5. Click Save.

CLI Procedure

This is a minimal example. Other options may be required (i.e., IP address is static or uses DHCP).

```
[admin@nodegrid /]# cd settings/network_connections/
[admin@nodegrid network_connections]# add
[admin@nodegrid {network_connections}]# set name=test
[admin@nodegrid {network_connections}]# set type=loopback
[admin@nodegrid {network_connections}]# commit
```

WiFi Module

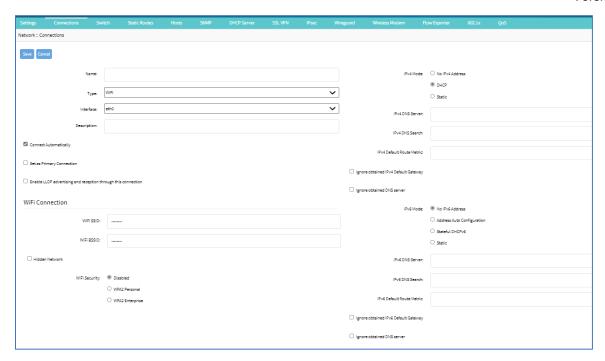

When the WiFi module is installed, Nodegrid automatically creates an SSID named "Nodegrid" on the 192.168.162.x/24 network with an IP address of 192.168.162.1. Any WiFi enabled device can be connected to this network to access the Nodegrid device.

NOTE: The device can also be accessed through the Internet with properly configured routing and network settings.

To connect the Nodegrid device to another client through any available SSID:

- 1. Go to Network :: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name (of the module).
- On the Type drop-down, select WiFi (modifies UI).
- 5. On Interface drop-down, select wlan0.
- 6. (optional) Enter a Description
- 7. In WiFi Connection menu

Enter SSID

Enter **BSSID**

- 8. On WiFi Security menu, select appropriate radio button.
- Enter Security settings (required for the selected connection)
- 10. Click Save.

General Information

User Interfaces

WebUI View

Each device's Nodegrid Platform can be accessed from ZPE Cloud via WebUI. This provides full access to device configuration and management.

All modern browsers with HTML5 are supported, including mobile (phone/tablet) browsers. This includes Internet Explorer 11, Edge, Chrome and Firefox.

Device WebUI Buttons

Menu	Item	Description
Access	Access	Easy access for all device users. With appropriate permissions, users can start sessions, control power and review device logging details.
Tracking	E Tracking	Provides an overview of general statistics and system information, including system utilization and serial port statistics.
System	System	Administrators can perform general admin tasks (firmware updates, backups , restorations, licensing).
Network	Network	Access and management of all network interfaces and features.
Managed Devices	Managed Devices	Administrators can add, configure, and remove devices managed through the Nodegrid platform.
Cluster	Cluster	Administrators can configure Nodegrid Cluster feature.
Security	Security	Uer access configuration options and general security settings.
Auditing	Auditing	Administrators can configure auditing levels and locations, and some global logging settings.
Dashboard	্রানা <u>্রী</u> Dashboard	Users and administrators can create and view dashboards and reports.
Applications	Applications	Only visible with a valid Virtualization license. Administrators can manage and control NFVs and Docker applications.

CLI Interface

The Nodegrid Platform can be accessed through a CLI interface, by connecting to the platform with a SSH client or through its console port. The interface can manage and configure the device, including access to console target sessions. CLI structure generally follows the WebUI.

CLI Folders

Folder	Description
/access	Access for all users to managed devices. Users with appropriate permissions can start sessions, control power, and review device logging details.
/system	Provides access to the combined functions of the Tracking and System menu (accessed with WebUI). Tracking features include an overview of general statistics and system information (system utilization, serial port statics, etc.). Administrators can perform general admin tasks on the Nodegrid Platform (i.e., firmware updates, backups, restorations, and licensing).
/settings	Provides access to the system, security, auditing, and managed device settings, and configuration options.

The CLI provides many commands and options. General usage includes several basic commands.

CLI Commands

CLI Command	Description
ТАВ ТАВ	Lists all available commands, settings, or options currently available.
Is	Lists the current folder structure.
show	Displays current settings in a tabular view.
set	Initiates changes and settings with "set option=value". Multiple settings can be combined in sequence of option=value pairs (i.e., set option1=value1 option2=value2). Regular expressions are supported.
commit	Commits changes to configurations. A "show" command can display whether previous line entries were saved. If not saved, enter commit. A "+" in front of the command prompt, [i.e., +admin@nodegrid /]#" is shown only when editing an entry or configuration. To add new entries, the + indicator is not displayed – and "commit" is required.
cancel or revert	Either command can restore a setting from the most recent "commit" command.

Examples

[admin@nodegrid /]# ls
access/
system/
settings/
[admin@nodegrid /]# show

Shell Access

The Nodegrid Platform has direct access to the operating system's shell. By default, this is only available to the root user (directly) and admin user (from CLI). Direct shell access can be granted to users of specific groups (useful for system automation processes which require direct shell access. Authorization for usets is provided with SSH key authorization.

Access should be limited based on shell access requirements. This requires careful consideration and caution. Changes made through Shell access can have a negative impact.

Access to Devices

This provides an overview of all available target devices (Search is available). Users can connect to managed devices and review current device status. User permissions and current state of Nodegrid Cluster nodes determine which devices are displayed.

Device Sessions

When a user logs into the WebUI, the first page is the Access section. This is overview of all available user-accessible targets. Each device current connection status and available connection types are shown.

	_		
Davica	Sac	ein	ne

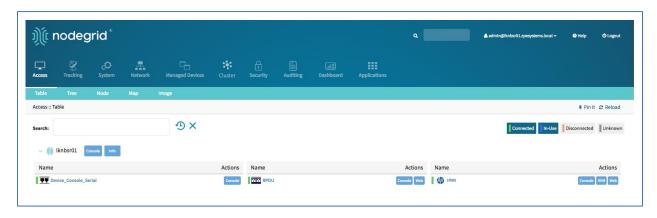

State	Indicator color	Icon	Description
Connected	Green	Connected	Nodegrid can successfully connect to the target device and it is available for sessions
In-Use	Blue	In-Use	The Device is currently in use
Disconnected	Orange	Disconnected	Nodegrid could not successfully connect to the target device and it is not available for sessions

State	Indicator color	Icon	Description
Unknown	Grey	Unknown	The connection status is unknown. This is the default state for target devices with the connection mode On-Demand or for new target devices for which the discovery process is not completed.

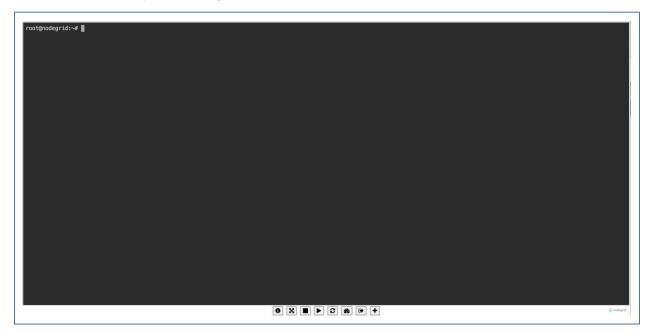

Device sessions can be directly started from this location.

WebUI View

Console (CLI) View

Click **Console** to display a new target session window.

Buttons at lower center can further control the target session and target device. Available options depend on connection type and device configuration.

Session Options

Options	Description
1 Info	Displays current device details.
X Full Screen	Expand the window to use the full monitor screen. The session window does not expand beyond its maximum size.
■ Power Off	Performs a power off on the target device through a connected Rack PDU or IPMI device.
▶ Power On	Performs a power on for the target device through a connected Rack PDU or IPMI device.
2 Reset	Initiates a power cycle on the target device through a connected Rack PDU or IPMI device.
₽ Power Status	Display device's current power status (as returned by a connected Rack PDU or IPMI device).
Close Session	Closes the active session.
•	Expands or minimizes the command line options at the window's lower center.

Closing the CLI window closes the target device session.

Copy & Paste Functionality

NOTE: TTYD terminal copy and paste is not currently supported within Windows and Linux.

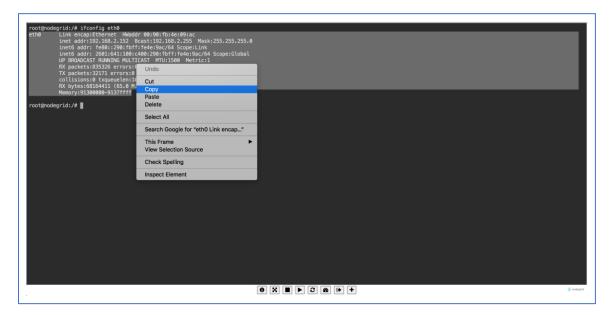

Nodegrid supports **Copy & Paste** of text between the HTML5 graphical device session window and the desktop environment. Some OS may require a different key combination.

Windows and Linux user – Ctrl+Ins to copy and Shift+Ins to paste.

Mac users - Cmd+C to copy, and Cmd+V to paste.

Highlight the text and right-click to open the menu – or use the shortcuts.

CLI Device Sessions

A user can directly go to this directory with cd /access.

View currently available targets

show.

Example:

Start a device session

connect <target name>

Example:

```
[admin@nodegrid access]# connect Device_Console_Serial
[Enter '^Ec?' for help]
[Enter '^Ec.' to cli ]
login:
```

NOTE: Only console sessions or sessions which provide a text-based interface can be started from the CLI.

With an established connection, use the escape sequence ^Ec or ^O to further control the session.

NOTE: Escape sequences can be changed in Device Settings.

Session Options

Option	Escape sequence	Description
	^Ec.	Disconnect the current session.
g	^Ecg	Display current user group information.
1	^Ecl	Send break signal (defined in Device Settings).
w	^Ecw	Display currently connected users.
<cr></cr>	^Ec <cr></cr>	Send ignore/abort command signal.
k	^Eck	Serial port (speed data bits parity stop bits flow).
b	^Ecb	Send a broadcast message. Type message after the escape sequence
i	^Eci	Display current serial port information.
s	^Ecs	Change current session to read-only mode.
а	^Eca	Change current session to read-write mode.
f	^Ecf	Force current session to read-write mode.
Z	^Ecz	Disconnect a specific connected user session.
?	^Ec?	Print this message.

Power Control options are available on targets connected to a managed Rack PDU or provided power control through IMPI. The power menu can be displayed with ^O.

Power Menu - Device_Console_Serial

Options:

- 1. Exit
- 2. Status
- 3. On
- 4. Off
- 5. Cycle

Enter option:

Search Functionality

The Nodegrid Platform provides advanced search capabilities to locate and view information on target devices they require.

Device Search

In the WebUI, this is available on all Device views and can filter device lists based on search criteria. On the CLI, the search command is available in the access folder.

NOTE: The function is available on stand-alone units and units in a Cluster configuration. All changes to device information and newly added device properties are automatically updated in the System as a background function.

Search Field Options

Field	Description
[search string]	A search string that represents part of or a complete string.
AND	Combines multiple search strings with an Boolean AND.
OR	Combines multiple search strings with a Boolean OR. Default search behavior for more than one search string.
NOT	Targets matching the search string with Boolean NOT are excluded from the returns.
[field name]	Limits the search results to a specific Field Name.

NOTE: The Boolean keywords AND, OR and NOT are case-sensitive. Lower-case is entered (and, or, not) is included as part of the search string.

Examples of standard and custom field data searches

This includes groups (such as "admin" group), IP addresses or a specific device.

Example with AND "PDU AND IPMI"

[admin@nodegrid search]# search "PDU AND IPMI"

search: PDU AND IPMI
results: 1 result
page: 1 of 1

[admin@nodegrid search]# show

```
name status action
==== ======
IPMI -
```

Example with OR "PDU OR IPMI"

Example with "PDU IPMI"

```
Device_Console_SSH -
Device_Console_Serial -
```

Example with NOT "PDU AND NOT IPMI"

Example with Field Name "name:PDU"

Global Search

The WebUI has a Global Search field located at the top, next to current user information and log out. Global Search works in the same as Device Search and supports the same keywords. This is available at the top of all pages.

Access Section

Each device on the Nodegrid platform has embedded device information. This information is visible to users and is fully searchable. The stored information includes discovered values and those set during device configuration. An administrator can associate additional device information.

The WebUI offers multiple ways to view and access target devices. By default, all users have access to the Table view. Other views are also available and improve the accessibility or visualization of the current device status. The following views are available:

- Table View
- Tree View
- Node View
- Map View
- Image View

Each user can change the default view after login. To change the default view, display the preferred view and click **Pin It**.

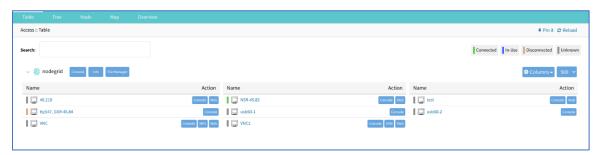

NOTE: The Table view is the only CLI view.

Table tab

This provides easy access to all devices with current status conditions. Any connected devices to a device are shown on the Cluster page.

NOTE: When attempting to access an unlicensed or expired license device, an error message displays. Contact ZPE to update the license.

In the table, the *Action* column shows buttons to access that device. Type of button depends on device: **Console**, **SSH**, **Telnet**, **KVM**, **MKS**.

Click on a device to provide the full range of access.

Function Descriptions

These are additional functions on the page.

• Search – entry returns list of matches.

These entries are accepted:

[search string] (string to represent part of or a complete string)

Boolean (AND, OR, NOT – caps only)

[field name] (limits results to a specific Field Name).

Clock icon (shows a history of past searches)

"X" (clears the search field)

• **Arrow** (show/hide table – click down arrow to hide table, click up arrow to show table)

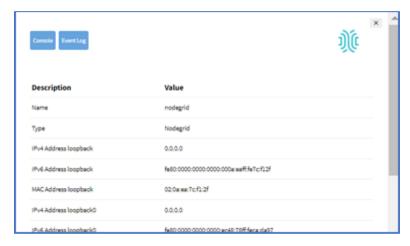

• Console (display CLI window)

• Info (pop-up dialog provides device-specific details)

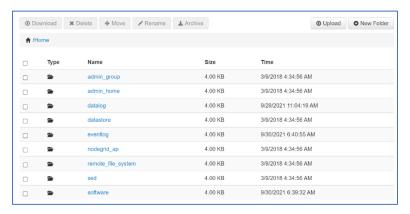

Pop-up dialog buttons:

Console button – opens the Console (CLI) window (see above).

Event Log button – displays the raw log details.

• File Manager (display folder/file structure)

• Page Quantity button – on the drop-down (100, 250, 500, 750, 1000) to select the number of items to display on the page.

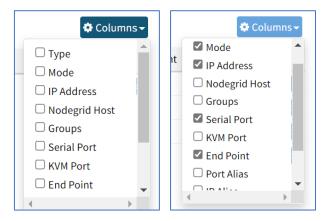

Display Table Columns

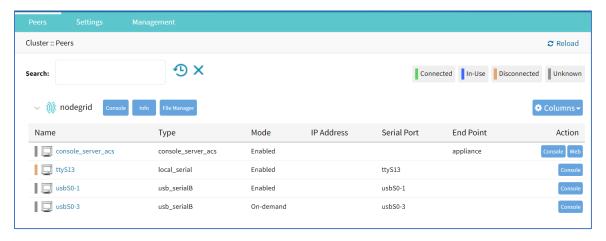

WebUI Procedure

Details on each device can be viewed by selecting columns.

- 1. Go to Access :: Table.
- 2. On the right side, click **Columns** (displays a drop-down dialog of available table columns.

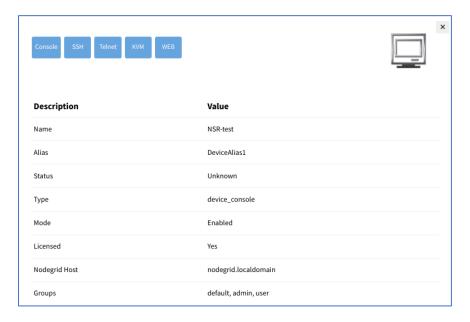

3. As columns are selected, they are displayed in the table.

View Device Details

Click on a device to provide the full range of access.

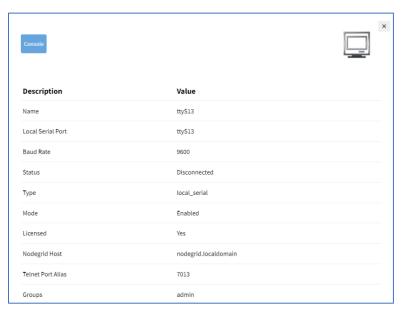

Manage Power

View Device Power Details

WebUI Procedure

- 1. Go to Access :: Table.
- 2. In the **Name** column, locate and click the name (displayed dialog details change according to the type).

CLI Procedure

Example:

[admin@nodegrid /]# cd /access/

[admin@nodegrid access]# show Device_Console_Serial/

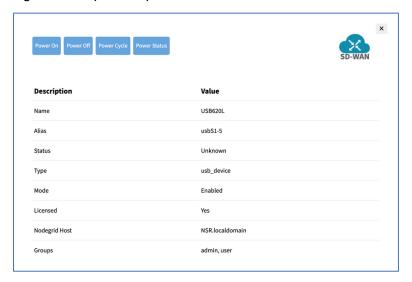

name: Device_Console_Serial

status: Connected

Set Device USB Power Option

WebUI Procedure

- 1. To confirm the USB card supports USB Passthrough, go to *System :: Slots. Supported cards* . Check the *Add-ons* column for the entry: **Power Control**.
- 2. Go to Access :: Table.
- 3. Locate and click the device name.
- 4. On the pop-up dialog, select a power option.

Power On (turns power on)

Power Off (turns power off)

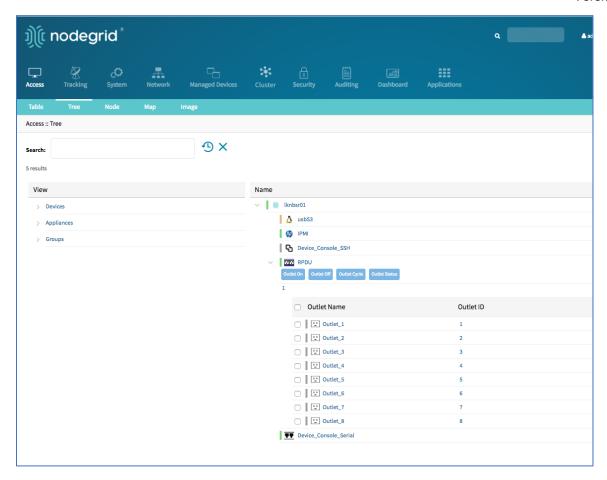

Power Cycle (cycles power on and off)

Power Status (current status)

Tree tab

This displays the physical hierarchies of the Nodegrid setup. Start connections can be applied to each target device. Target devices can be found based on location (i.e., Nodegrid name, city name, data center name, row and rack, and others). Filters can be applied based on location and device types. Select from the expanded *View* column branches: *Devices*, *Appliances*, *Groups*.

View Column Branches

There are three trees in the View columns: **Devices**, **Appliances**, Groups. Details can be observed by clicking the ">".

Expand Individual Tree

WebUI Procedure

This example uses Devices.

1. Click the right icon to display the next branch level.

2. If further branch levels are available, click the right icon to expand the branch.

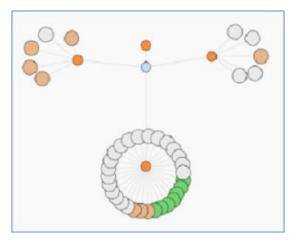

- 3. To contract the branch, click the down $\[\]$ icon.
- 4. To see every item in the tree, click on All. Click on other items to see associated names (some clicked items may not have names).
- 5. Click on a name to display a pop-up dialog of details.

Node tab

This arranges all target devices around connected Nodegrid units. It provides a complete overview of all targets and Nodegrid units in a Cluster.

Click on a node to display a pop-up dialog of details.

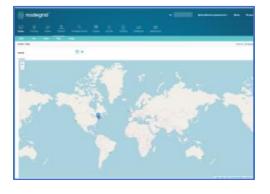

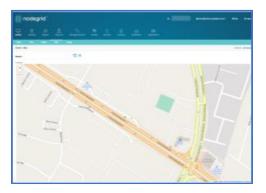

Map tab

This shows device status on a global-based map. This provides an overview of all targets and Nodegrid units in a Cluster. Precise device location details are included down to a building level. Click on a marker to display information and connections.

Global View

Zoomed in Street View

To move the map position, use click and drag.

Image tab

The configuration requires Professional Services implementation. Contact Customer Support at support@zpesystem.com for additional information.

If available, displays a custom view of Nodegrid units and target devices with associated information.

Tracking Section

This provides information about the System and connected devices. This includes Open Sessions, Event List, Routing Table, System Usage, Discovery Logs, LLDP, and Serial Statistics.

Open Sessions tab

This provides an overview of connected users and devices sessions.

Sessions Table sub-tab

This lists all users actively connected to the system, from where they are connecting from, and for how long.

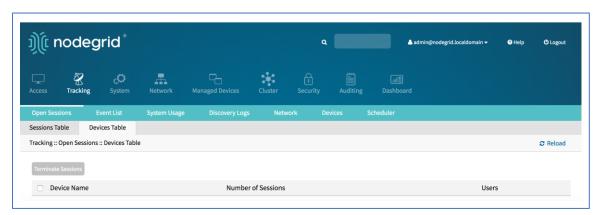

Terminate Session

WebUI Procedure

- 1. Go to Tracking :: Sessions Table.
- 2. In *User* column, locate session and select checkbox.
- 3. Click Terminate.

Devices Table sub-tab

This shows information about active device sessions, the amount of connected session and the users which are connected.

Terminate Session

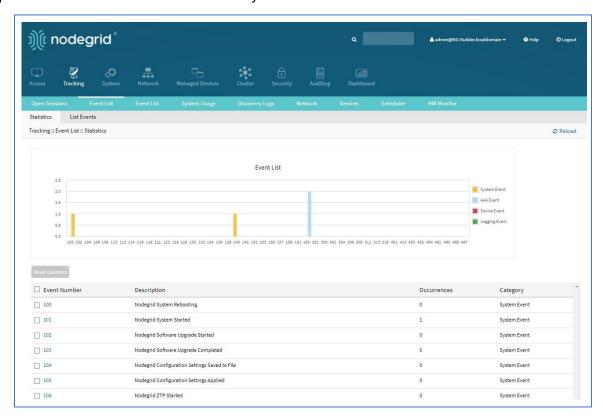

WebUI Procedure

- 1. Go to Tracking :: Sessions Table.
- 2. In Device Name column, locate session and select checkbox.
- 3. Click Terminate.

Event List tab

Statistics sub-tab

This provides statistical information on the system event occurrences.

Reset Event Counter

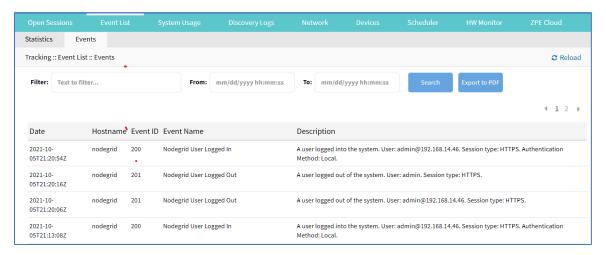

WebUI Procedure

- 1. Go to Tracking :: Event List :: Statistics.
- 2. In Event Number column, locate the number and select checkbox (can select multiple).
- 3. Click Reset Counters.

Events sub-tab

This displays event details (read only).

Export Event Listing to PDF

The PDF file can contain a maximum of 10,000 results. The list is based on the Filter fields and the **From** and **To** dates.

WebUI Procedure

- 1. Go to Tracking :: Event List :: Events.
- (optional) Enter Filter keyword.
- (optional) Adjust From and To date/time, then click Search.
- 4. Click Export to PDF.
- 5. On Save dialog, navigate to the location and click **Save**.

List Events Main Table

Column name	Description
Date	Date the event took place.
Hostname	Name of the host where the event took place.
Event ID	Event code.
Event Name	Name of the event.
Description	Description of the event.

Registered Events Description

Event #	Description	Catagory
100	Nodegrid System Rebooting	System Event
101	Nodegrid System Started	System Event

Event #	Description	Catagory
102	Nodegrid Software Upgrade Started	System Event
103	Nodegrid Software Upgrade Completed	System Event
104	Nodegrid Configuration Settings Saved to File	System Event
105	Nodegrid Configuration Settings Applied	System Event
106	Nodegrid ZTP Started	System Event
107	Nodegrid ZTP Completed	System Event
108	Nodegrid Configuration Changed	System Event
109	Nodegrid SSD Life Left	System Event
110	Nodegrid Local User Added to System Datastore	System Event
111	Nodegrid Local User Deleted from System Datastore	System Event
112	Nodegrid Local User Modified in System Datastore	System Event
113	Nodegrid ZTP execution success	System Event
114	Nodegrid ZTP execution failure	System Event
115	Nodegrid Session Terminated	System Event
116	Nodegrid Session Timed Out	System Event
118	Nodegrid Power Supply State Changed	System Event
119	Nodegrid Power Supply Sound Alarm Stopped by User	System Event
120	Nodegrid Utilization Rate Exceeded	System Event
121	Nodegrid Thermal Temperature ThrottleUp	System Event
122	Nodegrid Thermal Temperature Dropping	System Event
123	Nodegrid Thermal Temperature Warning	System Event
124	Nodegrid Thermal Temperature Critical	System Event
126	Nodegrid Fan Status Changed	System Event
127	Nodegrid Fan Sound Alarm Stopped by User	System Event
128	Nodegrid Total number of local serial ports mismatch	System Event

Event #	Description	Catagory
129	Nodegrid dry contact change state	System Event
130	Nodegrid License Added	System Event
131	Nodegrid License Removed	System Event
132	Nodegrid License Conflict	System Event
133	Nodegrid License Scarce	System Event
134	Nodegrid License Expiring	System Event
135	Nodegrid Shell Started	System Event
136	Nodegrid Shell Stopped	System Event
137	Nodegrid Sudo Executed	System Event
138	Nodegrid SMS Executed	System Event
139	Nodegrid SMS Invalid	System Event
140	Nodegrid Connection Up	System Event
141	Nodegrid Connection Down	System Event
142	Nodegrid SIM Card Swap	System Event
144	Network Failover Executed	System Event
145	Network Failback Executed	System Event
150	Nodegrid Cluster Peer Online	System Event
151	Nodegrid Cluster Peer Offline	System Event
152	Nodegrid Cluster Peer Signed On	System Event
153	Nodegrid Cluster Peer Signed Off	System Event
154	Nodegrid Cluster Peer Removed	System Event
155	Nodegrid Cluster Peer Became Coordinator	System Event
156	Nodegrid Cluster Coordinator Became Peer	System Event
157	Nodegrid Cluster Coordinator Deleted	System Event
158	Nodegrid Cluster Coordinator Created	System Event

Event #	Description	Catagory
159	Nodegrid Cluster Peer Configured	System Event
160	Nodegrid Search Unavailable	System Event
161	Nodegrid Search Restored	System Event
200	Nodegrid User Logged In	AAA Event
201	Nodegrid User Logged Out	AAA Event
202	Nodegrid System Authentication Failure	AAA Event
300	Nodegrid Device Session Started	Device Event
301	Nodegrid Device Session Stopped	Device Event
302	Nodegrid Device Created	Device Event
303	Nodegrid Device Deleted	Device Event
304	Nodegrid Device Renamed	Device Event
305	Nodegrid Device Cloned	Device Event
306	Nodegrid Device Up	Device Event
307	Nodegrid Device Down	Device Event
308	Nodegrid Device Session Terminated	Device Event
310	Nodegrid Power On Command Executed on a Device	Device Event
311	Nodegrid Power Off Command Executed on a Device	Device Event
312	Nodegrid Power Cycle Command Executed on a Device	Device Event
313	Nodegrid Suspend Command Executed on a Device	Device Event
314	Nodegrid Reset Command Executed on a Device	Device Event
315	Nodegrid Shutdown Command Executed on a Device	Device Event
400	Nodegrid System Alert Detected	Logging Event
401	Nodegrid Alert String Detected on a Device Session	Logging Event
402	Nodegrid Event Log String Detected on a Device Event Log	Logging Event
410	Nodegrid System NFS Failure	Logging Event

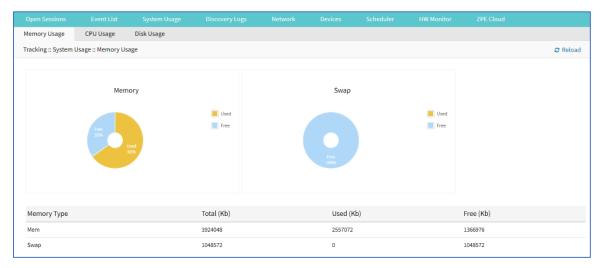

Event #	Description	Catagory
411	Nodegrid System NFS Recovered	Logging Event
450	Nodegrid Datapoint State High Critical	Logging Event
451	Nodegrid Datapoint State High Warning	Logging Event
452	Nodegrid Datapoint State Normal	Logging Event
453	Nodegrid Datapoint State Low Warning	Logging Event
454	Nodegrid Datapoint State Low Critical	Logging Event
460	Nodegrid Door Unlocked	Logging Event
461	Nodegrid Door Locked	Logging Event
462	Nodegrid Door Open	Logging Event
463	Nodegrid Door Close	Logging Event
464	Nodegrid Door Access Denied	Logging Event
465	Nodegrid Door Alarm Active	Logging Event
466	Nodegrid Door Alarm Inactive	Logging Event
467	Nodegrid PoE Power Fault	Logging Event
468	Nodegrid PoE Power Budget Exceeded	Logging Event

System Usage tab

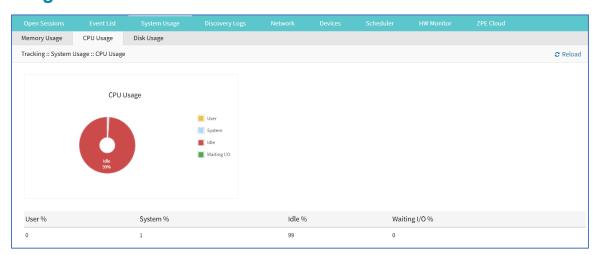

This presents information usage details. The sub-tabs present read-only information.

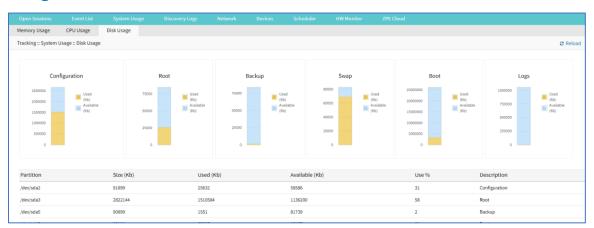

Memory Usage sub-tab

CPU Usage sub-tab

Disk Usage sub-tab

Discovery Logs tab

This shows the logs of the discovery processes set on the Managed Devices setting for auto discovery.

Discovery Logs Table

Column name	Description
Date	Date of the log entry.
IP Address	IP address of device.
Device Name	Name of the device.
Discovery Method	Discovery method used to identify the log entry.
Action	The action that occurred that generated the log entry.

Reset Logs

WebUI Procedure

- 1. Go to Tracking :: Discovery Logs.
- 2. Click Reset Logs.

The table will clear.

Network tab

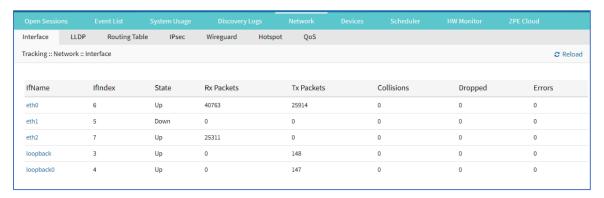

This displays network Interface information, LLDP, Routing Table, IPsec Table, and Hotspot details.

NOTE: The displayed sub-tabs can change depending on the device configuration.

Interface sub-tab

This displays the network interface statistics, like state, package counters, collisions, dropped and errors.

Interface Table

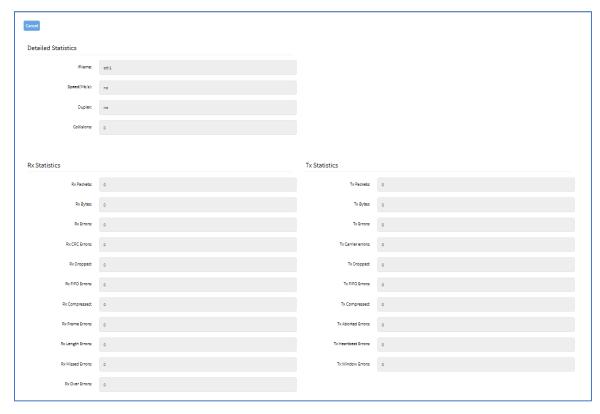

Column name	Description
IfName	Name of interface.
IfIndex	Name of index.
State	Status of the interface.
Rx Packets	Number of receive packets.
Tx Packets	Number of transmit packets,
Collisions	Number of collisions.
Dropped	Number of dropped packets.
Errors	Number of Errors

Review Interface Details

WebUI Procedure

- 1. Go to Tracking :: Network :: Interface.
- 2. Click on an Interface (displays dialog of details):

Detailed Statistics (IfName, Speed, Duplex, Collisions)

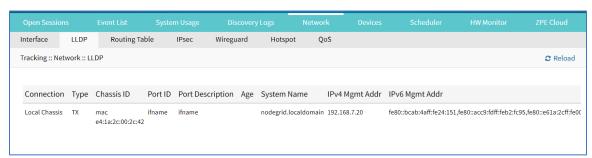

Rx Statistics (Rx Packets, Rx Bytes, Rx Errors, Rx CRC Errors, Rx Dropped, Rx FIFO Errors, Rx Compressed, Rx Frame Errors, Rx Length Errors, Rx Missed Errors, Rx Over Errors)

Tx Statistics (Tx Packets, Tx Bytes, Tx Errors, Tx Carrier errors, Tx Dropped, Tx FIFO Errors, Tx Compressed, Tx Aborted Errors, Tx Heartbeat Errors, Tx Window Errors)

3. **Cancel** button returns to the **Interface** sub-tab.

LLDP sub-tab

(read only) This shows devices that advertise their identity and capabilities on the LAN. LLDP advertising and reception can be enabled in Nodegrid with network connections.

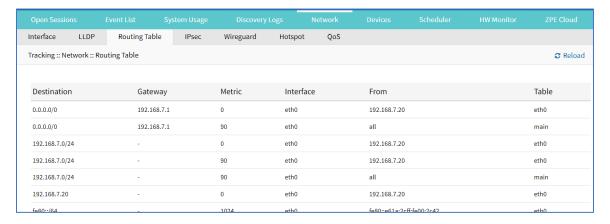

LLDP Table

Column name	Description
Connection	Type of connection.
Туре	Type of transmission (Tx, Rx).
Chassis ID	Chassis identification number.
Port ID	Port identification.
Port Description	Description of the port.
Age	Age of the LLDP
System Name	Name of the system.
IPv4 Mgmt Addr	IPv4 management address.
IPv6 Mgmt Addr	IPv6 management address.

Routing Table sub-tab

(read only) This shows the routing rules that Nodegrid follows for network communications. Any added static network routes are included.

Routing Table

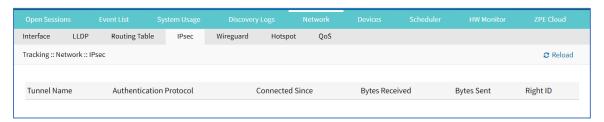

Column name	Description
Destination	Destination IP address.
Gateway	Gateway IP address.
Metric	Metric value.
Interface	Type of interface.

Column name	Description
From	From IP address.
Table	Table interface.

IPsec sub-tab

(read only) This displays information for each IPsec tunnel connection.

To appear on the IPsec list, Monitoring must be enabled for each IPsec tunnel.

IPsec Table

Column name	Description
Tunnel Name	Name of the tunnel.
Authentication Protocol	Protocols used for authentication.
Connected Since	Current connection time
Bytes Received	Bytes received by IPsec.
Bytes Sent	Bytes sent by IPsec.
Right ID	Tunnel right ID.

Wireguard sub-tab

This shows the Wireguard connection details.

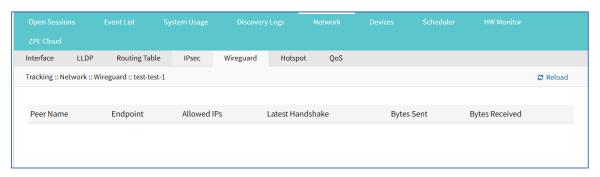

Wireguard Table

Column name	Description
Interface Name	Name of the Interface.
Listening Port	Port that Wireguard is listening.
Peers	Associated Wireguard peers

View Details on Wireguard Configuration

WebUI Procedure

- 1. Go to Tracking :: Network :: Wireguard.
- 2. In Interface Name column, click on a name (displays dialog of details):

3. Review details.

Hotspot sub-tab

This displays all devices currently connected to the hotspot.

Hotspot Table

Column name	Description
Name	Name of hotspot.
MAC Address	MAC address of hotspot
IP Address	IP address of hotspot.
Client ID	ID of the client.

Column name	Description
Lease Renewal	Renewal date.

Terminate Session

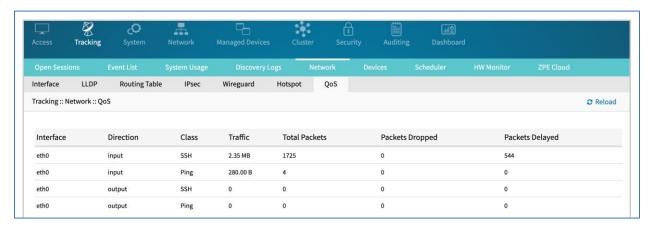

WebUI Procedure

- 1. Go to Tracking :: Network :: Hotspot.
- 2. Select checkboxes of sessions.
- 3. Click Terminate connection.

CLI Procedure

QoS sub-tab

(read only) This displays traffic information from each configured QoS (Quality of Service) class/interface. If the QoS interface is bidirectional, two entries are shown (one for input and one for output).

QoS Table

Column name	Description
Interface	Name of interface.
Direction	Direction (Input, Output).
Class	Class (SSH, Ping)
Traffic	Amount of traffic (MB).

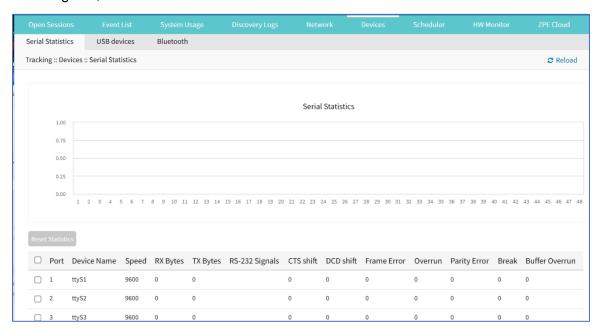

Column name	Description
Total Packets	Total number of packets.
Packets dropped	Number of dropped packets.
Packets delayed	Number of delayed packets.

Devices tab

This shows connection statistics for physically connected devices, like serial and USB devices, and wireless modems. The available options will depend on the specific Nodegrid unit.

Serial Statistics sub-tab

This provides statistical information on the serial ports connectivity such as transmitted and received data, RS232 signals, errors.

Reset Statistics Table

Column name	Description
Port	Port number.
Device Name	Name of device.
Speed	Speed (bps).
RX Bytes	Amount of received bytes.
TX Bytes	Amount of transmitted bytes.

Column name	Description
RS-232 Signals	Type of RS-232 signals.
CTS shift	Number of CTS shifts.
DCD shift	Number of DCD shifts.
Frame Error	Number of frame errors.
Overrun	Number of overruns.
Parity Error	Number of parity errors.
Break	Number of breaks.
Buffer Overrun	Number of buffer overruns.

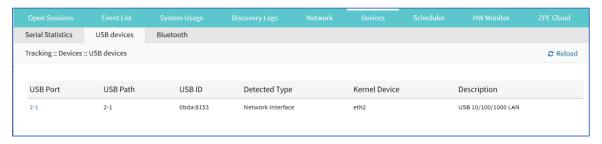

Reset Statistics

WebUI Procedure

- 1. Go to Tracking :: Devices :: Serial Statistics.
- 2. Select checkboxes next to Port numbers.
- 3. Click Reset Statistics.

USB devices sub-tab

This provides details about connected USB devices and initialized drivers.

USB Devices Table

Column name	Description
USB Port	USB port number
USB Path	USB path.
USB ID	USB identification.
Detected Type	Type of interface.

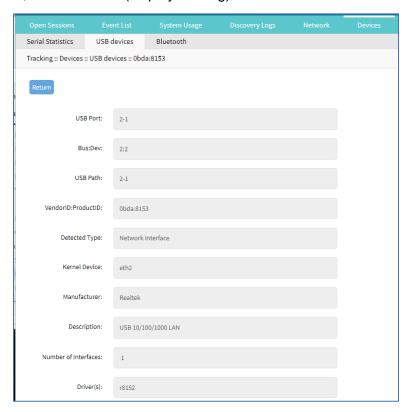

Column name	Description
Kernel Device	Kernel interface type.
Description	Description of USB.

View USB Device Details

WebUI Procedure

- 1. Go to Tracking :: Devices :: USB devices.
- 2. In USB Port column, click on name (displays dialog)

3. Review details.

Convert M.2 Analog Modem to USB Serial Device

WebUI Procedure

- 4. Go to Tracking :: Devices :: USB devices.
- 5. In USB Port column, click on name of a M.2 Analog Modem.
- 6. On the dialog, click Set as Serial Device.
- 7. Click Save.

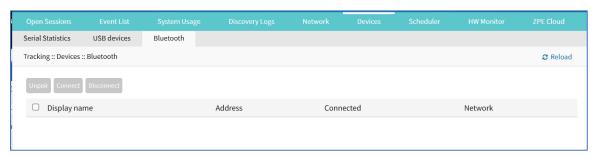

Convert USB Analog Modem to USB Serial Device

WebUI Procedure

- 8. Go to Tracking :: Devices :: USB devices.
- 9. In USB Port column, click on name of a USB Analog Modem (displays dialog).
- 10. On the dialog, click Set as Serial Device.
- 11. Click Save.

Bluetooth sub-tab

This displays information about Bluetooth devices.

Bluetooth Table

Column name	Description
Display Name	Displayed name of Bluetooth.
Address	IP Address of Bluetooth.
Connected	Connection status.
Network	Network of Bluetooth.

Unpair Bluetooth

WebUI Procedure

- 1. Go to Tracking :: Devices :: Bluetooth.
- 2. Select checkbox.
- 3. Click Unpair.

Connect Bluetooth

WebUI Procedure

- 1. Go to Tracking :: Devices :: Bluetooth.
- 2. Select checkbox.
- 3. Click Connect.

Disconnect Bluetooth

WebUI Procedure

- 1. Go to Tracking :: Devices :: Bluetooth.
- 2. Select checkbox.
- 3. Click Disconnect.

Scheduler tab

This provides information about scheduled tasks.

Scheduler Table

Column name	Description
Task Name	Name of scheduled task.
User	User who initiated task.
Date	Date of task.
PID	Product identification.
Event	Event name.
Error	Error description.

Reset Log

WebUI Procedure

- 1. Go to Tracking :: Scheduler.
- 2. Select checkbox to reset.
- 3. Click Rest.

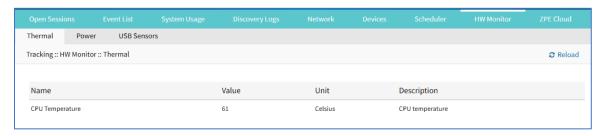

HW Monitor tab

This displays Nodegrid system information. Content is read only.

Thermal sub-tab

This displays the current CPU temperature, System temperature, and FAN speeds (if available).

Thermal Table

Column name	Description
Name	Name of thermal measurement.
Value	Current value
Unit	Type of measurement (i.e., C).
Description	Description of thermal type.

Power sub-tab

This displays information about current Power sources (current state and power consumption).

Power Table

Column name	Description
Name	Name of power source.
Value	Current value
Unit	Type of measurement
Description	Description of power source.

USB Sensors sub-tab

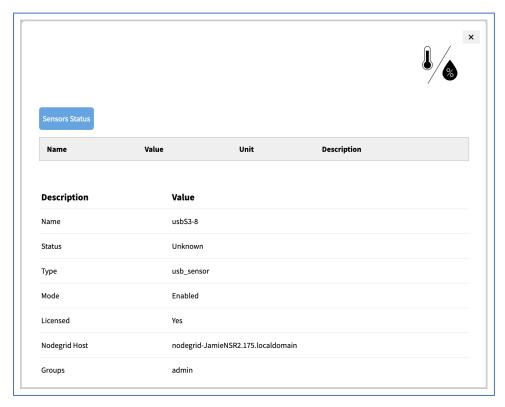

NOTE: The details shown depend on the Nodegrid model.

Nodegrid USB Temperature and Humidity Sensors are automatically discovered by the System (usb_sensor). After detection, it must be enabled to use with monitoring and alarm management.

Click a sensor to open a detail page. A click on the **Sensor Status** button displays more details and specifics.

Supported USB Sensors

USB Device	Vendor
USB Serial	FTDI, CP2105, CP210X
USB KVM	ZPE's KVM-U01 - KVM over USB dongle (VGA, USB kb, USB mouse)
USB Sensor	ZPE's THS-U01 - temperature & humidity, Degree Controls F200 - Air Velocity Sensor (paired with TLL-232R-3V3 or TTL-232R-5V converter cable)
USB Analog Modem	Zoom, USRobotics
USB Cellular Modem	USB620L, USB730L

USB Device	Vendor
USB 1G Ethernet	Any USB 3.0 Gigabit Ethernet adapter
USB SFP Ethernet	Winyao USB1000F USB 3.0 Gigabit Fiber adapter
USB WiFi	Wireless Network adapter for Linux (TP-Link TL-WN722N)
USB Storage	Any USB flash drive

NOTE: These devices utilize Linux drivers supported by the System. Certain driver versions may not work as expected. If any issues occur, contact support@zpesystems.com.

Supported USB Devices

USB I/O Device	Description	GPIO Input	Analog Input
Numato GP80001E	GPIO Module	8-On/Off	6-Any
Numato USBPOWRL001	Relay Module	No	4-Any
Delcom USB HID 9040XX	Light Tower	No	No
Patlite LR6-USB-W/K	Light Tower	No	No
TRH-320	Humidity and temperature sensors	No	1 Humidity - % 1 Temperature - °C
Degree Controls F200	Air temperature and velocity sensors	No	1 Air Temperature - °C 1 Air Velocity - m/s
Homologated Generic USB I/O Device	All in one	100-On/Off	100 generic - any

Additional Supported USB Devices

USB i/O Device	GPIO output	Relay	Light	Buzzer
Numato GP80001E	UP TO 8 – On, Off	No	No	No
Numato USBPOWRL001	UP TO 4 – On, Off	2 – On, Off	No	No
Delcom USB HID 9040XX	No	No	3 – On, Off, continuous cycle	1 – On, Off, continuous cycle
Patlite LR6-USB-W/K	No	No	1 – On, Off, continuous cycle	1 – On, Off, continuous cycle
TRH-320	No	No	No	No
Degree Controls F200	No	No	No	No

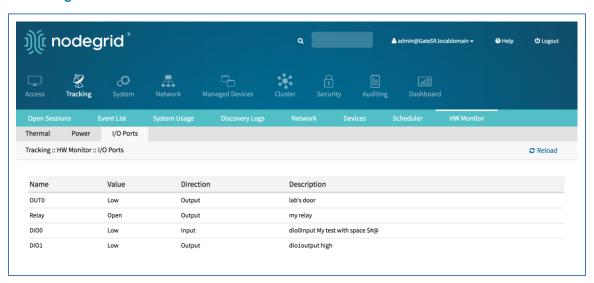

USB i/O Device	GPIO output	Relay	Light	Buzzer
Homologated Generic USB I/O Device	100 – On, Off	100 – On, Off	100 – On, Off, continuous cycle	100 – On, Off, continuous cycle
Numato GP80001E	UP TO 8 – On, Off	No	No	No
Numato USBPOWRL001	UP TO 4 – On, Off	2 – On, Off	No	No

I/O Ports (GPIO) sub-tab (Gate/Link SR only)

NOTE: This is specific to Nodegrid Gate SR and Nodegrid Link SR.

This shows the status of GPIO ports (only displayed for models with GPIO ports.

Example - Nodegrid Gate SR WebUI

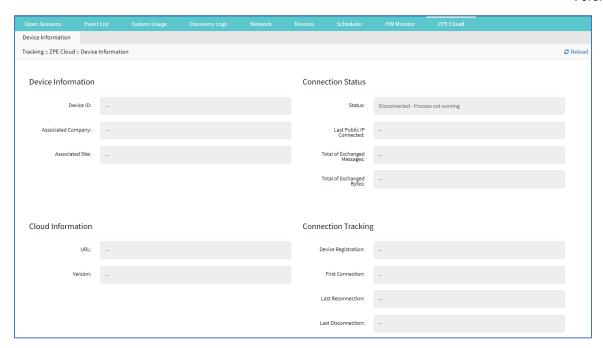

ZPE Cloud tab

This is used to configure connections with the ZPE Cloud application. Details groups are:

- Device Information
- Connection Status
- Cloud Information
- Connection Tracking

System Section

System settings are configured for each device, including license keys, general system settings, firmware updates, backup and restore, and more.

License tab

This displays all licenses enrolled on this Nodegrid device, with license key, expiration date, application, etc. Number of licenses (used and available) are shown in upper right. Licenses can be added or deleted. If licenses expire or are deleted, the devices exceeding the total licenses changes status to "unlicensed" (information is retained in the System). Unlicensed devices are not shown on the Access tab.

For Nodegrid access and control, each managed device must have a license. The required license for each Nodegrid serial port is included with the device.

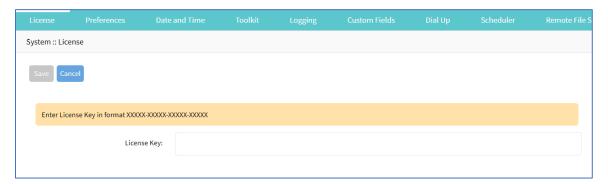

NOTE: A managed device is any physical or virtual device defined under Nodegrid for access and control.

Manage Licenses

Add a License

- 1. Go to System :: License.
- 2. Click **Add** (displays dialog).

- 3. Enter License Key.
- 4. Click Save.

Delete a License

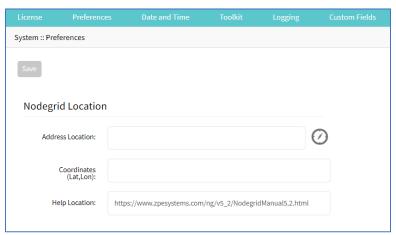

WebUI Procedure

- 1. Go to System :: License.
- 2. Select the checkbox.
- 3. Click Delete.

Preferences tab

Main system preferences are configured in this tab. Any change in the fields activates the **Save** button.

Nodegrid Location

Edit Location Preferences

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Nodegrid Location menu:

Enter Address Location (a valid address for the device location).

Enter **Coordinates (Lat, Lon)** (if GPS is available, click Compass icon – or manually enter GPS coordinates).

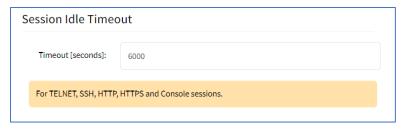

For **Help Location**, enter alternate URL location for the User Guide.

NOTE: The administrator can download the documentation from ZPE (HTML5 or PDF, as preferred) to be available to users (when Help icon is clicked.

3. When done, click Save.

Session Idle Timeout

This is the number of seconds of session inactivity until the session times out and logs the user off.

Change Timeout

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Session Idle Timeout menu (number of seconds of session inactivity until the session times out and logs the user off.) This setting applies to all telnet, SSH, HTTP, HTTPS, and Console sessions.

NOTE: Any change in value is applied on the next login.

In Timeout (seconds), enter one of these:

zero (0) – the session will never expire.

Value (i.e., 6000 keeps session active for 100 minutes).

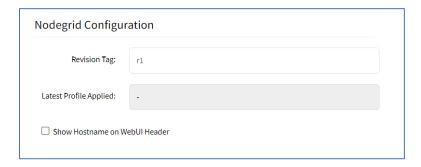

3. Click Save.

Nodegrid Configuration

The Revision Tag field is a free format string used as a configuration reference tag. This field can be manually updated or updated with an automated change management process.

The Latest Profile Applied shows the last applied profile (through a ZTP process or the ZPE Cloud).

Modify Nodegrid Configuration

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Nodegrid Configuration menu:

Enter Revision Tag.

(optional) Select **Show Hostname on WebUI Header** checkbox (this displays the device hostname on the WebUI banner. Select color (click in color grid or enter RGB or CYMK.

3. Click Save.

Login Page Logo Image

The administrator can change the logo image (png or jpg) used on the Nodegrid WebUI login. It can be uploaded from the local desktop or a remote server (FTP, TFTP, SFTP, SCP, HTTP, and HTTPS). This is the URL format (username and password may be required): <PROTOCOL>://<ServerAddress>/<Remote File>.

After upload, refresh the browser cache to display the new image.

Update Logo Image Selection

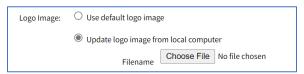

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Logo Page Logo Image menu:
- 3. (optional) Select Logo Image selection checkbox.

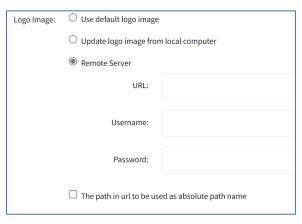

In Logo Image menu, select one:

Use default logo image radio button.

Update log image from local computer radio button. Click **Choose File** to locate and select logo (jpg, png).

Remote Server radio button. Enter URL, Username, Password. (as needed) Select The path in url to be used as absolute pathname checkbox.

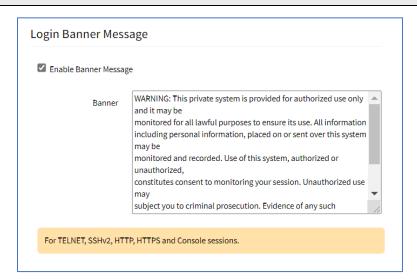

4. Click Save.

Login Banner Message

Nodegrid can be configured to show a login banner on Telnet, SSHv2, HTTP, HTTPS and Console login. This banner is displayed on the device login page. The default content (below) can be edited.

WARNING: This private system is provided for authorized use only and it may be monitored for all lawful purposes to ensure its use. All information including personal information, placed on or sent over this system may be monitored and recorded. Use of this system, authorized or unauthorized, constitutes consent to monitoring your session. Unauthorized use may subject you to criminal prosecution. Evidence of any such unauthorized use may be used for administrative, criminal and/or legal actions.

Change Message to appear on Login Page

The message can include device-specific information, such as Device Alias or other device identifier detail.

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Logo Banner Message menu:

Click in Banner.

Modify text, as needed (to control line length, use *Enter* for hard returns).

3. Click Save.

Utilization Rate Events

This sets up event notifications for utilization rates.

Set Utilization Rate

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Utilization Rate Events menu:

(optional) Select Enable Local Serial Ports Utilization Rate checkbox.

Select **Enable License Utilization Rate** checkbox and enter **Percentage to trigger events**. (An event notification is generated when the entered percentage is reached.)

3. Click Save.

Serial Console

This displays the baud speed of the device.

Set Serial Console Speed

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Serial Console menu:

On **Speed** drop-down, select baud rate (9600, 19200, 38400, 57600, 115200).

3. Click Save.

Network Boot

Nodegrid can boot from a network ISO image. Enter the unit's IPv4 address and netmask, ethernet interface (eth0 or eth1), and ISO image URL. Use this URL format: http://ServerIPAddress/PATH/FILENAME.ISO

Set Network Boot

WebUI Procedure

- 1. Go to System :: Preferences.
- 2. In the Network Boot menu:

Enter Unit IPv4 Address.

Enter Unit Netmask.

On **Unit Interface** drop-down, select one (eth0, eth1).

Enter ISO URL.

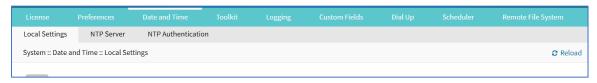

3. Click Save.

Slots tab (SR only)

This information identifies slots on Nodegrid SR devices with installed modules.

Date and Time tab

Nodegrid devices supports NTP (Network Time Protocol) Authentication and Cellular Tower Synchronization. This default configuration automatically retrieves accurate date/time from any server in the NTP pool. NTP authentication provides an extra safety measure for Nodegrid to ensure that the timestamp it receives has been generated by a trusted source, protecting it from malicious activity or interception.

Local Settings sub-tab

If needed, the date/time can be manually set. NTP is the default configuration. In manual configuration mode, Nodegrid device uses its internal clock to provide date and time information. Refresh the page to see the current system time. Date and time synchronization from cell tower is an additional convenience that obtains exact time directly from the carrier network.

To set the local time zone, select from the drop-down menu (default: UTC).

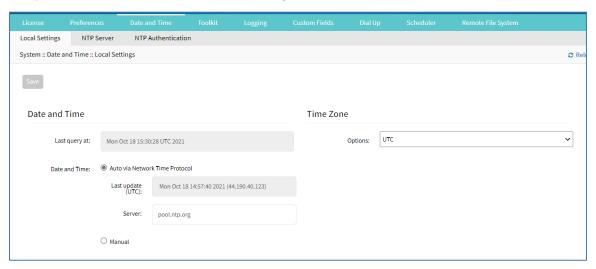

NOTE: All timestamps in Event Logs are in UTC.

Configure Local Time

Use this dialog to setup local time and UTC time zone for the device location.

WebUI Procedure

1. Go to System :: Date and Time :: Local Settings.

2. In Date and Time menu:

In Date and Time, select one:

Auto via Network Time Protocol radio button:

Enter Server.

Manual radio button:

Scroll through Calendar and select date.

In Choose Time, enter hour, minute, second.

3. In *Time Zone* menu:

On **Options** drop-down, select the appropriate time zone.

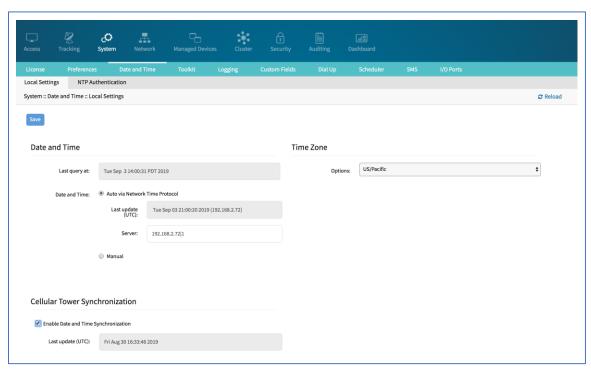

4. Click Save.

Cellular Tower Synchronization

This is supported by units with an installed Wireless Modem card and valid SIM card. The Nodegrid device can get date/time from the cellular tower. The SIM card must be registered to the carrier network).

WebUI Procedure

1. Go to System :: Date and Time :: Local Settings.

2. In Cellular Tower Synchronization menu:

Select Enable Date and Time Synchronization checkbox.

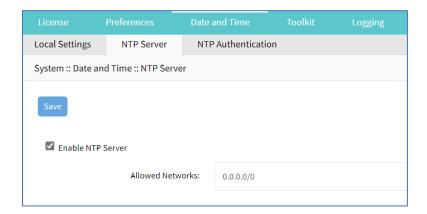

- 3. Make other changes, as needed.
- 4. Click Save.

NOTE: Both NTP and Cellular Tower Synchronization can be enabled. The last date/time received from either source is applied. This allows updated date/time with any connection failover configuration.

NTP Server sub-tab

This page enables the NTP Server.

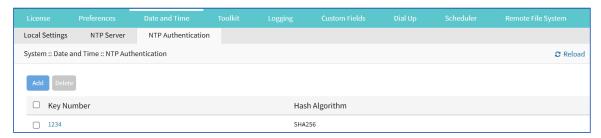

Configure the local NTP server

WebUI Procedure

- 1. Go to System :: Date and Time :: NTP Server.
- 2. Select Enable NTP Server checkbox.
- 3. In Allowed Networks, enter all allowed networks (comma-separated).
- 4. Click Save.

NTP Authentication sub-tab

NTP reduces security risks associated with time synchronization. With authentication, there is assurance a generated response is from an expected source (rather than maliciously generated or intercepted). Authentication applies a list of agreed keys (passwords) between a server and a client. Communication between server and client is encrypted with one of the agreed keys appended to the messages. The appended key is un-encrypted to ensure it matches one of the agreed keys. Only then is action taken.

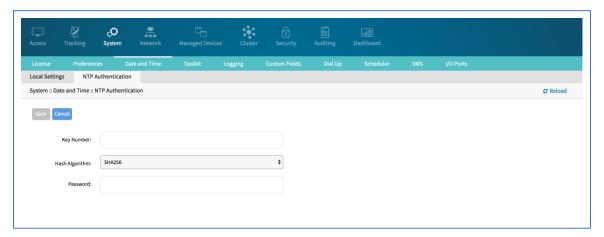

Configure Key Number Set

This requires Admin privileges. Repeat the process for each key number set.

- 1. Go to System :: Date and Time :: NTP Authentication.
- 2. Click Add (displays dialog).

- 3. For **Key Number**, enter any unsigned integer (range: 1 to 2³² 1
- 4. On Hash Algorithm drop-down, select one (MD5, RMD160, SHA1, SHA256, SHA384, SHA512, SHA3-224, SHA3-256, SHA3-384, SHA3-512).
- For Password, enter a character string (space character not allowed).
 Alternatively, enter a hexadecimal number with prefix HEX#####.
- 6. Click Save.

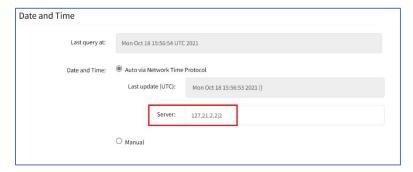

Delete Key Number

WebUI Procedure

- 1. Go to System :: Date and Time :: NTP Authentication.
- 2. Select checkbox next to Key Number to be deleted.
- 3. Click Delete.

Link the NTP server and Key Number

- 1. Go to System :: Date and Time :: Local Settings.
- 2. Use separator '|' (pipe) between server address and its key number.

- 3. Make other changes, as needed.
- 4. Click Save.

Toolkit tab

System maintenance features are available in System :: Toolkit page.

Reboot

Reboot command is a graceful shutdown and reboot of the Nodegrid device. A warning message informs that all active sessions will be dropped. During a reboot, the operating system is automatically restarted.

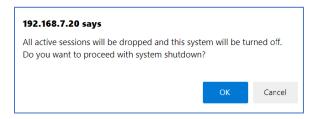

On click, displays pop-up dialog. Click **OK** to continue.

Shutdown

On a shutdown, the operating system will be brought to a halted state. At this point, it is safe to drop the power supply to the unit (turn off power supplies or removing power cords). To turn the unit back on, the power supply must be stopped and then restarted.

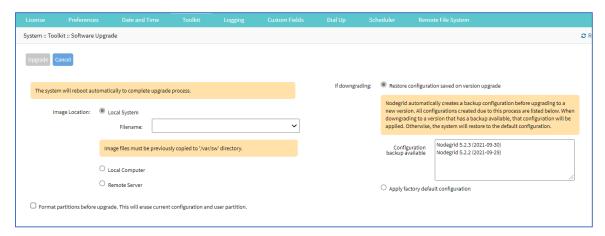

On click, displays pop-up dialog. Click **OK** to continue.

Software Upgrade

Nodegrid can be updated via the WebUI or with the CLI.

Software Upgrade

This version can be upgraded from previous release v4.2.4 or newer. If necessary, to upgrade from v3.2, v4.0, v4.1 or older v4.2 must first upgrade to v4.2.4, and then upgrade to v5.2.0.

Downgrade is only allowed to v4.2.4 or newer. UEFI mode and Secure Boot must be disabled prior to downgrading to v5.0 or older.

There are three methods for device software upgrades:

- From the Nodegrid device
- From the connected local computer
- From a remote server

The new software ISO image must be previously loaded.

- To upgrade from the Nodegrid device itself, place the new software ISO file in /var/sw.
- To upgrade from a connected local computer, click on the **Local Computer** radio button. Locate and select the file.
- To upgrade from a remote server, click **Remote Server** radio button. Enter the server URL and required username and password. Supported protocols: FTP, TFTP, SFTP, SCP, HTTP, and HTTPS. The URL can be the IP address or hostname/FQDN. (If using IPv6, include brackets [].)

CLI Example

ftp://<your-ftp-server>/downloads/Nodegrid_v5.2.1.iso

Software Downgrade

If downgrading, options are:

- Format partitions before downgrade.
- Apply factory default configuration.
- Restore a saved configuration.

A status bar (WebUI only) displays progress of the software upgrade. When complete, a success dialog is displayed.

To upgrade via the CLI, execute these commands:

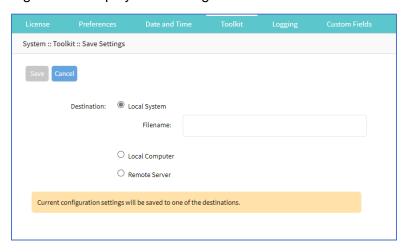

```
[admin@nodegrid /]# software_upgrade
[admin@nodegrid {toolkit}]# show

The system will reboot automatically to complete upgrade process.
image_location = local_system
filename =
Image files must be previously copied to '/var/sw' directory.
format_partitions_before_upgrade = no
if_downgrading = restore_configuration_saved_on_version_upgrade

If no configuration matches the version, factory default will be applied.
saved_configurations:
Nodegrid 5.0.1 (2020-08-16)
Nodegrid 4.2.0 (2018-05-02)
```

Save Settings

This saves current configuration. Displays this dialog.

- 1. Go to System :: Toolkit.
- 2. Click Save Settings icon (displays dialog).

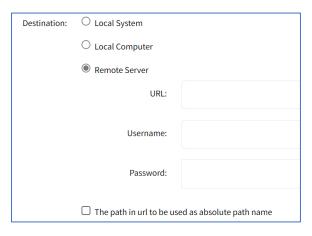

3. In *Destination* menu, select one.

Local System radio button. Enter File Name.

Local Computer radio button. Click Save (file is saved on the local computer Download folder.

Remote Server radio button. Enter URL, Username, and Password. (as needed) Select Download path is absolute path name checkbox.

The URL can be the IP address or hostname/FQDN. If using IPv6, use brackets [...]. Supported protocols: FTP, TFTP, SFTP, and SCP.

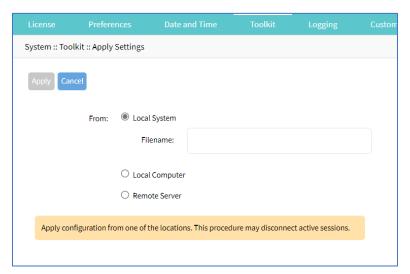

4. Click Save.

NOTE: The option to save to ZPE Cloud is only available if ZPE Cloud is enabled.

Apply Settings

Saved configurations can be loaded from the Nodegrid device, a local connected computer, or from a remote server. When applied on the Nodegrid device, that becomes the new configuration. The server address can be the IP address or hostname/FQDN. If using IPv6, use brackets [...]. Supported protocols: FTP, TFTP, SFTP, SCP, HTTP and HTTPS.

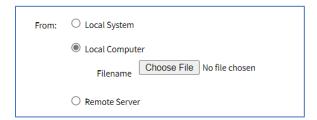

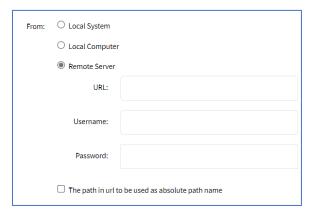

- 1. Go to System :: Toolkit.
- 2. Click **Apply Settings** icon (displays dialog).
- 3. In From menu, select one:

Local System radio button. Enter File Name.

Local Computer radio button. Click Choose File (locate and select the file).

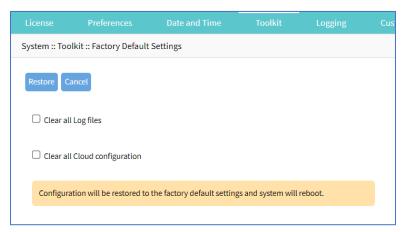

Remote Server radio button. Enter **URL**, **Username**, and **Password**. (as needed) Select **Download path is absolute path name** checkbox.

4. Click Apply.

Restore to Factory Default Settings

The Nodegrid solution offers multiple options to reset the unit back to factory default settings. Displays this dialog.

If restore to factory default, all configuration files are set to factory default. There is an option to save or clear all log files.

Hard restore is available on the Nodegrid device. To use, locate the RST button on the chassis. Press the RST button down for at least 10 seconds. All configuration files are reset to defaults and log files are cleared.

NOTE: Reset to factory default through the RST button requires a minimum ET version of 80814T00. See *About* page for the current version.

The system can also be reset by reformatting the whole system partition. This wipes all existing files and reset the system back to it's shipped state.

WebUI Procedure

- 1. Go to System :: Toolkit.
- Click Restore to Factory Default Settings icon (displays dialog).
 - (optional) Select Clear all Log files checkbox.
 - (optional) Select Clear all Cloud Configuration checkbox
- Click Restore.

System Certificate

A certificate can be loaded to the Nodegrid device from a connected local computer or a remote server. On the dialog, there are two sub-tabs: **Upload Certificate** and **Create CSR**.

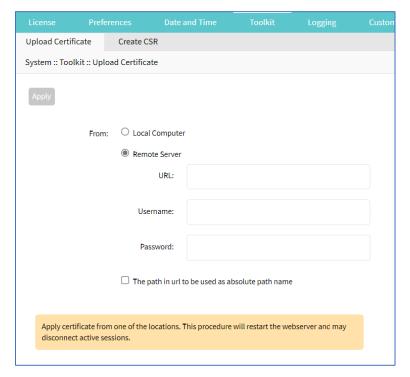

WARNING! When the certificate is applied, the web server is restarted and active sessions are disconnected.

The protocols FTP, TFTP, SFTP, SCP, HTTP, and HTTPS are supported.

Upload Certificate

- 1. Go to System :: Toolkit.
- Click System Certificate icon (displays dialog).

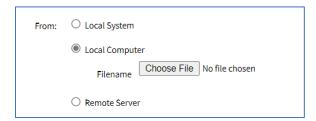

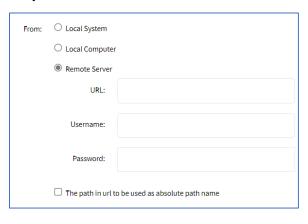

3. On the **Upload Certificate** sub-tab, *From* menu, select one.

Local System radio button. Enter File Name.

Local Computer radio button. Click Choose File (locate and select the file).

Remote Server radio button. Enter URL, Username, and Password. (as needed) Select Download path is absolute path name checkbox.

4. Click Apply.

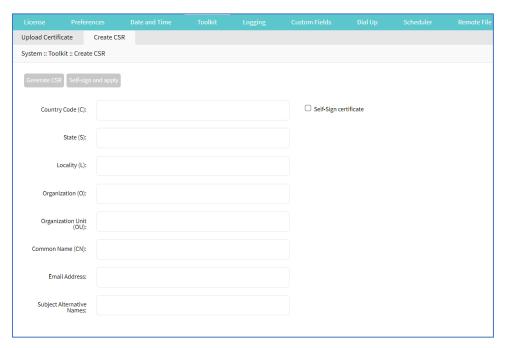

Create a Self-Sign Certificate

A self-sign certificate can be created and applied directly in the Nodegrid.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click System Certificate icon (displays dialog).
- 3. On the Create CSR sub-tab:

Enter Country Code (C).

Enter State (S).

Enter Locality (L).

Enter Organization (O).

Enter Organization Unit (OU) .

Enter Common Name (CN).

Enter Email Address.

(optional) Subject Alternative Names.

4. Select Self-Sign certificate checkbox and enter Certificate validity (days) value.

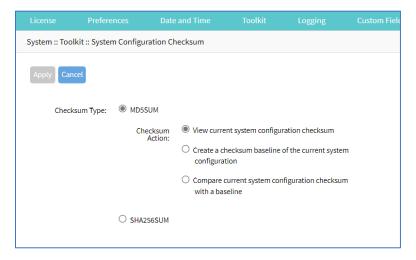

- 5. Click Self-sign and apply.
- 6. The page reloads after 10 seconds, and the certificate is applied.

System Configuration Checksum

This creates a checksum baseline of a specific current configuration. Administrators can use this quick tool to periodically verify if the configuration has changed. Displays this dialog.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click System Configuration Checksum icon (displays dialog).
- 3. In Checksum Type menu, select one:

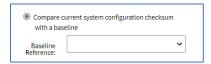

MD5SUM radio button

In Checksum Action menu, select one:

View current system configuration checksum radio button.

Create a checksum baseline of the current system configuration radio button.

Compare current system configuration checksum with a baseline radio button. On Baseline Reference drop-down, select one.

SHA256SUM radio button

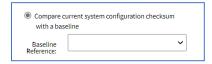

In Checksum Action menu, select one:

View current system configuration checksum radio button.

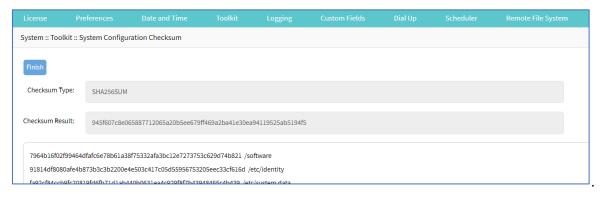

Create a checksum baseline of the current system configuration radio button.

Compare current system configuration checksum with a baseline radio button. On Baseline Reference drop-down, select one.

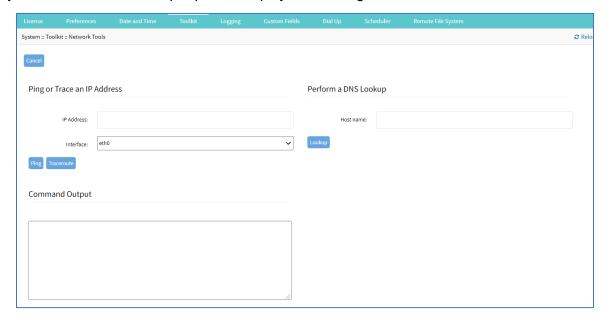

4. Click **Apply** (display results).

- 5. Review the results. If the configurations match, the main result is "Passed". If any change, altered locations are identified.
- 6. When done, click Finish.

Network Tools

This provides essential network communication tools ("ping", "traceroute" and "DNS lookup"). Output is displayed in the *Command Output* panel. Displays this dialog.

Send a Ping

This command-line utility checks if a network device is reachable. The command sends a request over the network to a specific device. If successful, a response from the device is displayed.

- 1. Go to System :: Toolkit.
- 2. Click **Network Tools** icon (displays dialog).
- 3. In the Ping or Traceroute and IP Address menu:

Enter IP Address.

On Interface drop-down, select one (eth0, eth1).

- 4. Click Ping.
- 5. Review results in Command Output panel.

Send a Traceroute

A traceroute sends ICMP (Internet Control Message Protocol) packets. Every router during the packet transfer is identified. This determines if the routers effectively transferred the data.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click **Network Tools** icon (displays dialog).
- 3. In the *Ping or Traceroute and IP Address* menu:

Enter IP Address.

On Interface drop-down, select one (eth0, eth1).

- 4. Click Traceroute.
- 5. Review results in Command Output panel.

Do a DNS Lookup

This process looks for the DNS record returned from a DNS server. Devices need to translate email addresses and domain names into meaningful numerical addresses.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click **Network Tools** icon (displays dialog).
- 3. In the Perform a DNS Lookup menu:

Enter Host name.

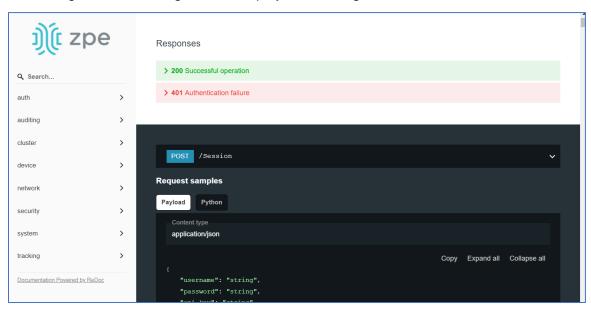

- 4. Click Lookup.
- 5. Review results in Command Output panel.

API

RESTful API

The Nodegrid Platform provides an embedded RESTful API. This provides API calls to access and modify the Nodegrid device configuration. Displays this dialog.

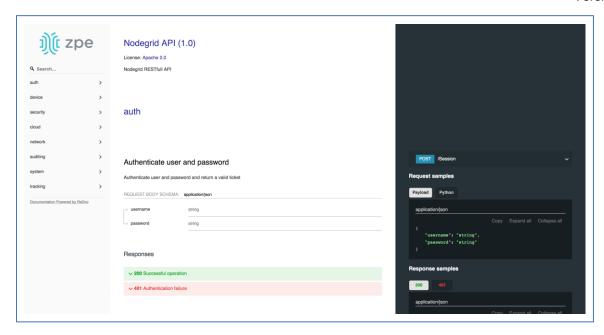

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click on the API icon.

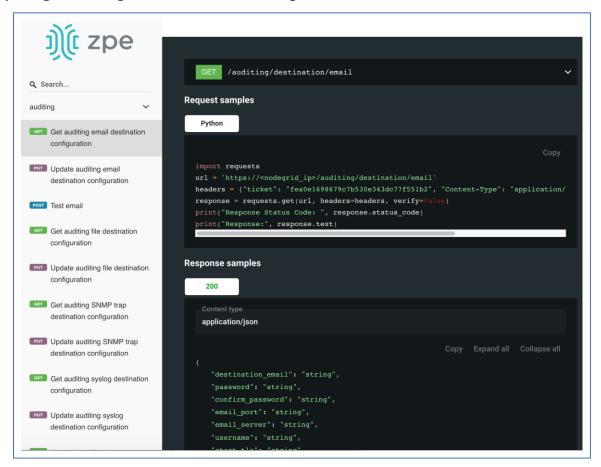

Alternatively, on Banner, **User Name** drop-down (top right), click **API Documentation**.

3. On the left panel, click the > arrow to display API calls for that function. Request and Response examples are included.

Example: "get auditing email destination configuration"

gRPC

The gRPC framework is supported (default: disabled). To enable gRPC:

1. Go to Security :: . Services.

2. In Active Services menu:

Select **Enable gRPC** checkbox.

Enter gRPC Port.

3. Click Save.

gRPC is very scalable, performance-based RPC framework that uses simple service definitions and structured data.

There are four service definitions:

```
get_request (APIRequest) - reads data. Returns (APIReply)
```

post_request (APIRequest) - executs commands or add an entry. Returns (APIReply)

put_request (APIRequest) - executs commands that need a selected entry, or update an entry. Returns (APIReply)

delete_request (APIRequest) - Deletes existing data sets (or destroys a session. Returns (APIReply)

APIRequest expects three arguments:

path - gRPC path to be used.

ticket - authentication ticket for the request.

data - structured data, in json format.

All three arguments follow the same structure as the existing REST API's. See https://<Nodegrid IP>/api_doc.html for more details.

APIReply returns two arguments:

message - structured data in json format.

status_code - status_code as int32 number.

CLI Examples

post_request (Authentication - returns a session ticket)

```
post_request({path: '/v1/Session', data: '{"username": "admin", "password":
    "admin"}'}, [...]
```

get_request (get network connection details)

```
get_request({path: '/v1/network/connections', ticket: 'xxxxxxxxxxxxx'}, [...]
```

post_request (add a phone number to the sms whitelist)

```
post_request({path: '/v1/system/sms/whitelist', ticket: 'xxxxxxxxxxxxx', data
'{"name": "phone1", "phone_number": "+11111111111"}' }, [...]
```

put request (update an existing value on the sms whitelist)

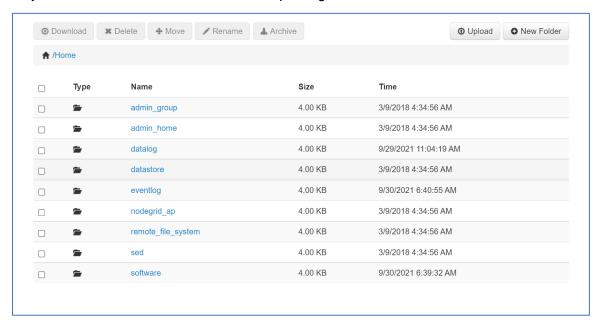

```
put_request({path: '/v1/system/sms/whitelist/phone1', ticket: 'xxxxxxxxxxxxx', data
'{"phone_number": "+12222222222"}' }, [...]
```

delete_request (delete an existing value on the sms whitelist)

```
delete_request({path: '/v1/system/sms/whitelist', ticket: 'xxxxxxxxxxxxxx', data
'{"whitelists": [ "phone1", "phone2" ]}' }, [...]
```

File Manager

This displays the folder and file structure. To review folder contents, click on the folder name. Root (Home)folders cannot be renamed, deleted, or moved. The basic folder structure cannot be modified. This is only available to users with administrator privileges.

Download File

This downloads the selected file(s) in a folder. Only files can be downloaded.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Navigate to the folder that contains the file.
- 4. Select the checkbox for each file to download.
- 5. Click Download.

Alternately, click on the File Name to download.

Delete File or Folder

This deletes the selected files/folders.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Go to the location.
- 4. Select checkbox(es).
- 5. Click Delete.

Move File or Folder

This moves the selected folders/files to a different folder location.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Go to the location.
- 4. Select checkbox(es).
- 5. Click Move.
- 6. On the *Move* pop-up dialog, enter **Target** path.

Click **OK**.

Rename File or Folder

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Go to the location.
- 4. Select checkbox.
- 5. Click Rename.
- 6. On the *Rename* pop-up dialog, enter **New Name**.

7. Click OK.

Archive File or Folder

NOTE: When a root folder is archived, it is saved in the Home directory. It cannot be deleted or moved.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click **File Manager** icon (displays dialog).
- 3. Go to the location.
- 4. Select checkbox(es).
- 5. Click Archive.
- 6. On the *Create Archive* pop-up dialog, confirm the Name (modify as needed). Select **Embed directories in archive** checkbox. Click **Create**.

The archive is saved in the same folder location. It can be renamed, moved, or downloaded, as needed.

Create New Folder

Cannot be done in Home location.

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Navigate to the folder that contains the new folder.
- 4. Click New Folder.
- 5. On the New Folder pop-up dialog, enter Folder Name. Click OK.

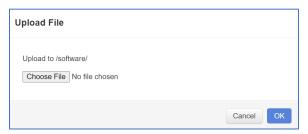

The new folder is added in that location.

Upload File

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon (displays dialog).
- 3. Navigate to the folder for the uploaded file.
- 4. Click Upload.
- 5. On the *Upload File* pop-up dialog, click **Choose File**. Locate and select the file. Click **OK**.

The file will upload and become available.

Diagnostic Data

This tool creates a report on the system status of the Nodegrid device. The contents help invesitage the device functionality. A series of commands output the state of the system, collect various log files, and copies the important configuration files. The output compacted file helps debug the system in case of any error or unexpected behavior.

The generated file is saved:

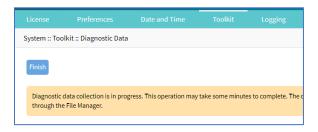

/home/admin/logs/collection_nodegrid_XXXX-XX-XX-XX-XX-tar.gz

Step 1 - Initiate Diagnostic Data

This runs the Diagnostic Data tool. The results are accessed with **File Manager**.

WebUI Procedure

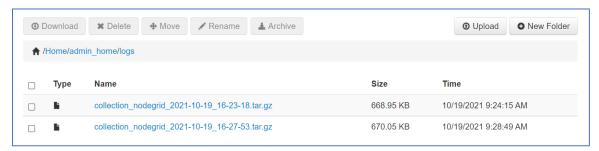

- 1. Go to Systems :: Toolkit.
- 2. Click Diagnostic Data icon.
- 3. The tool will run the diagnostics.
- 4. When done, click Finish.

Step 2 – Access the Diagnostic Data Results

(Admin privileges required.)

- 1. Go to System :: Toolkit.
- 2. Click File Manager icon.
- 3. Go to folder: /Home/admin_home/logs.

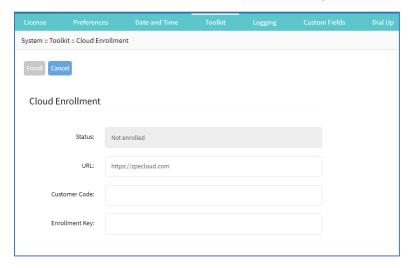

- Locate the tarball and select checkbox.
- 5. Click Download.

Review the file, as needed.

Cloud Enrollment

This allows enrollment of the device in ZPE Cloud. Displays this dialog.

Enable Cloud Enrollment

WebUI Procedure

- 1. Go to System :: Toolkit.
- 2. Click Cloud Enrollment icon (displays dialog)
- 3. In the Cloud Enrollment menu:

Enter **URL** of the Cloud application.

Enter Customer Code.

Enter Enrollment Key.

4. Click Save.

CLI Procedure

- 1. On the Access table, click **Console**.
- 2. On the CLI window, enter these parameters, then use "show" to confirm the configuration.

```
[admin@nodegrid /]# cloud_enrollment
[admin@nodegrid {toolkit}]# <TAB><
cancel commit enroll ls set show
[admin@nodegrid {toolkit}]# set <TAB><
customer_code= enrollment_key= url=
[admin@nodegrid {toolkit}]# set customer_code=12341234
[admin@nodegrid {toolkit}]# set enrollment_key=12341234
[admin@nodegrid {toolkit}]# set url=https://zpecloud.com
[admin@nodegrid {toolkit}]# show
status: Enrolled at https://zpecloud.com</pre>
```

```
url = https://zpecloud.com
customer_code = 12341234
enrollment_key = ******
[admin@nodegrid {toolkit}]# commit
```

NOTE: To locate Customer Code and Enrollment Key, log into ZPE Cloud account and go to Settings: Enrollment. (The Enable Device Enrollment checkbox must be enabled.)

To show ZPE Cloud enrollment settings:

```
[admin@nodegrid /]# cd /settings/zpe_cloud/
[admin@nodegrid zpe_cloud]# show
enable_zpe_cloud = yes
zpe cloud url: https://zpecloud.com
enable_remote_access = yes
enable_file_protection = yes
passcode = ********
enable_file_encryption = no
[admin@nodegrid zpe_cloud]#
```

3. A confirmation is sent when the enrollment succeeds.

Once the ZPE Cloud is enabled on the device, access ZPE Cloud application to manage all enrolled devices. Access requires a company registration and an admin user account.

Logging tab

Data Logging is used to collect information and can also create event notifications. This is archived by defined alert strings (a simple text match or regular expression pattern string) that are evaluated against the data source stream. Events are automatically generated for each match.

Data logging can be enabled for all CLI sessions to be used for inspection and auditing. Data logs are stored locally or remotely (depending on Auditing settings).

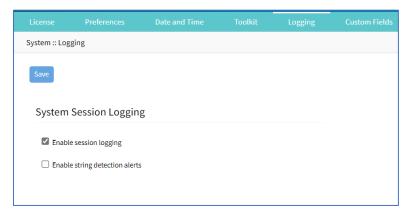

Enable Session Logging

Details can be modified, as needed.

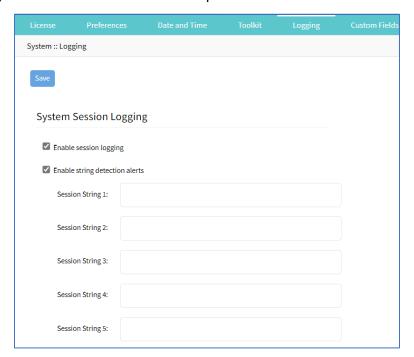

- 1. Go to System :: Logging.
- 2. In System Session Logging menu:

Select Enable session logging checkbox (expands dialog).

(optional) Select **Enable string detection alerts** checkbox (expands dialog). Enter **Session String** sets, as needed) that sends a notification alert upon occurrence.

3. Click Save.

Custom Fields tab

Searchable custom fields can be created here. For example, add details not available by default. These custom fields become part of the device details.

Add Custom Field

WebUI Procedure

- 1. Go to System :: Custom Fields.
- 2. Click Add (displays dialog).

- 3. Enter Field Name.
- 4. Enter Field Value.
- 5. Click Save.

Edit Custom Field

WebUI Procedure

- 1. Go to System :: Custom Fields.
- 2. Select checkbox next to Field Name.
- 3. Click **Edit** (displays dialog).
- 4. Make changes.
- 5. Click Save.

Delete Custom Field

- 1. Go to System :: Custom Fields.
- 2. Select checkbox next to Field Name.
- 3. Click Delete.

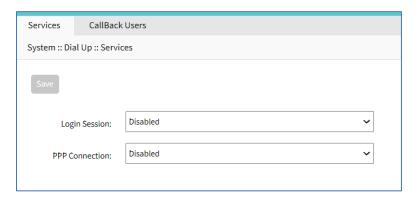

4. Click Save.

Dial-Up tab

Parameters for dialing to the device and callback users are configured here. Login and PPP connection features are also defined using the drop-down menu.

Services sub-tab

Manage Dial Up Services

WebUI Procedure

- 1. Go to System :: Dial Up :: Services.
- 2. On Login Session drop-down, select one (Enabled, Disabled, Callback).
- 3. On PPP Connection drop-down, select one (Enabled, Disabled, Callback).
- 4. Click Save.

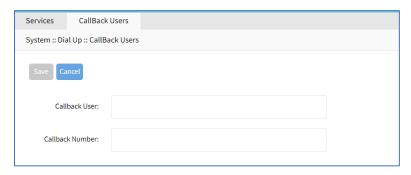

Callback Users sub-tab

Add Callback User

- 1. Go to System :: Dial Up :: Callback Users.
- 2. Click Add-(displays dialog).

- 3. Enter Callback User.
- 4. Enter Callback Number.
- 5. Click Save.

Delete Callback User

WebUI Procedure

- 1. Go to System :: Dial Up :: Callback Users.
- 2. Select checkbox next to Callback User.
- 3. Click Delete.

Edit Callback User

WebUI Procedure

- 1. Go to System :: Dial Up :: Callback Users.
- 2. In Callback User column, click name.

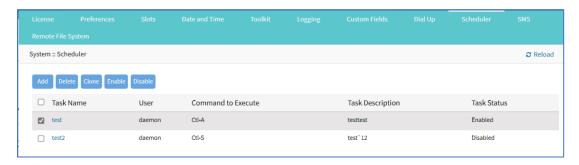

- 3. On the dialog, make changes.
- 4. Click Save.

Scheduler tab

On this tab, administrators can execute tasks and scripts on a schedule. These can be maintenance tasks or automation tasks that include end devices.

The tasks must be CLI file (text file with Nodegrid CLI commands) or script file located on the device. The file needs to be accessible and executable by the user.

Scheduler Date/Time examples

Factor	Daily Task 00:01 hours	Every Saturday: 23:45 hours	Every Hour on the Hour
Minute	1	45	0
Hour	0	23	*
Day of Month	*	*	*
Month	*	*	*
Day of Week	*	6	*

Manage Tasks

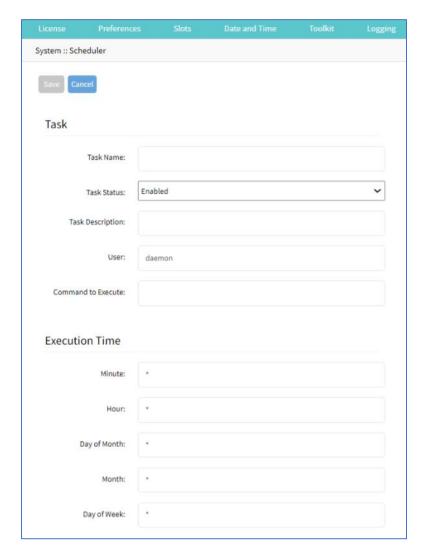

Add a Task

WebUI Procedure

1. Go to System :: Scheduler.

2. Click Add (displays dialog).

3. In the Task menu:

Enter Task Name.

On Task Status drop-down, select one (Enabled, Disabled).

(optional) Enter Task Description.

For User, accept default.

Enter Command to Execute (Shell command to execute).

4. In **Execution Time** menu, modify fields as needed.

Minute ('*', numbers [0-59], ',' separated, '-' separated, '/' separated)

Hour ('*', numbers [0-23], ',' separated, '-' separated, '/' separated)

Day of month ('*', numbers [1-31], ',' separated, '-' separated, '/' separated)

Month ('*', numbers [Jan=1, Feb=2, ..., Dec=12], ',' separated, '-' separated, '/' separated)

Day of Week ('*', numbers, ',', '-', '/' ',', '-', '/'.(Sun=0, Mon=1, ..., Sat=6))

5. Click Save.

Edit a Task

WebUI Procedure

- 1. Go to System :: Scheduler.
- 2. In the Task Name column, click on the name (displays dialog).
- 3. Make changes as needed.
- 4. Click Save.

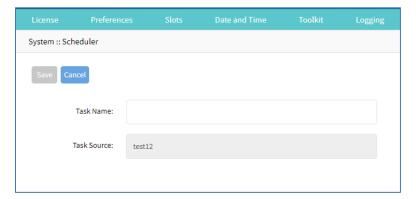

Delete a Task

WebUI Procedure

- 1. Go to System :: Scheduler.
- 2. Select checkbox next to a task.
- 3. Click Delete
- 4. On confirmation pop-up dialog, click **OK**.

Clone a Task

- 1. Go to System :: Scheduler.
- 2. In the Task Name column, click on the name (displays dialog).
- 3. Select checkbox next to a task.
- 4. Click Clone (displays dialog).

- 5. Enter Task Name.
- 6. Click Save.
- 7. As needed, edit the cloned task.

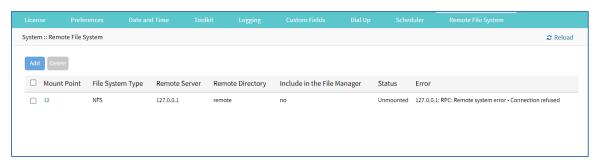

Enable/Disable a Task

WebUI Procedure

- 1. Go to System :: Scheduler.
- 2. In the Task Name column, click on the name (displays dialog).
- Select checkbox next to a task.
- 4. Click **Enable** (to enable task).
- 5. Click **Disable** (to disable task).

Remote File System tab

This designates remote file system folders.

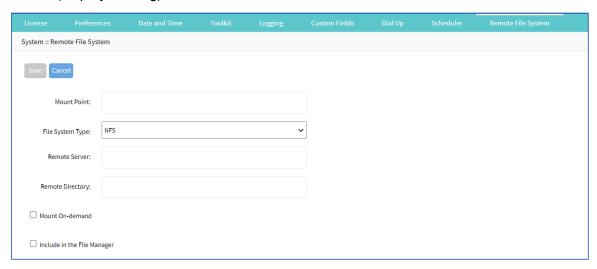

Manage Remote File System

Add Remote File System

WebUI Procedure

- 1. Go to System :: Remote File System.
- 2. Click Add (displays dialog).

3. Enter Mount Point.

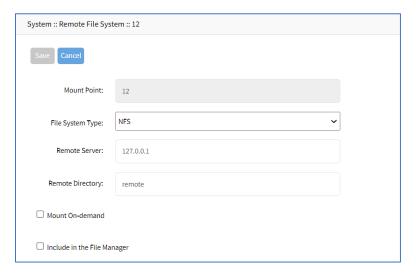

- 4. Select from **File System Type** drop-down.
- 5. Enter Remote Directory
- 6. (optional) Select Mount On-demand checkbox.
- 7. (optional) Select Include in the File Manager checkbox.
- 8. Click Save.

Edit Remote File System

WebUI Procedure

- 1. Go to System :: Remote File System.
- 2. Click on the name in the Mount Point column.

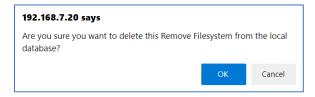

- 3. Make changes.
- 4. Click Save.

Delete Remote File System

WebUI Procedure

- 1. Go to System :: Remote File System.
- 2. Click Delete.

3. On the confirmation dialog, click **OK**.

SMS tab (only with installed cellular module)

NOTE: This function is only available on devices on devices with the cellular module installed: Services Router, Bold SR, Gate SR, and Link SR (loaded with M2-Card EM7565 M2/wireless modem).

Actions can be run remotely with an SMS incoming message. The SMS message authentication must be valid. Only allowed actions are executed.

By default, Enable Actions via incoming SMS is disabled. When enabled in the default state (no password), the device accepts SMS-triggered actions from all phone numbers. MAC address of ETH0 is the default password.

NOTE: The SMS option requires that the SIM card and plan to be SMS-enabled. This can be checked with the service provider. It is recommended to check the costs for this service, as some actions can respond with multiple SMS.

SMS Settings sub-tab

SMS Settings

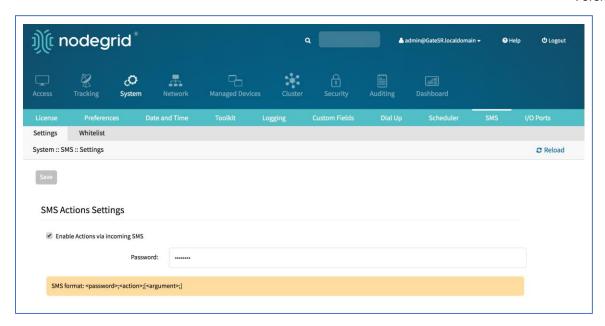

Action	Data type	Description
Enable Actions via incoming SMS	String	Disabled by default.
Allowed SMS Action		Actions allowed to be triggered by SMS.
apn - configure temporary APN	True/False	Configure a temporary APN.
simswap - temporary swap SIM card	True/False	Triggers a SIM card failover.
connect and disconnect - on/off data connection	True/False	Triggers a modem to connect or disconnect.
mstatus - request wireless modem status	True/False	Returns current modem status.
reset - reset wireless modem	True/False	Triggers a modem reset.
info - request information about Nodegrid	True/False	Returns About information.
factorydefault - factory default Nodegrid	True/False	Factory default of the Nodegrid device is triggered.
reboot - reboot Nodegrid	True/False	Triggers device reboot.

Enable Incoming SMS Actions

WebUI Procedure

1. Go to System :: SMS :: Settings.

- 2. In SMS Actions Settings menu, select Enable Actions via Incoming SMS checkbox.
- 3. Enter Password.
- 4. Click Save.

CLI Examples: SMS Actions and Messages

The format of SMS actions and subsequent response is given in the list below. Some actions may not require a response.

Format

```
Message format: < password >;< action >;< argument >;
  Response: <response>;
```

connect (try to power on data connection)

```
< password >;connect;
Connect action started;
```

disconnect (drop current data connection)

```
< password >;disconnect;
Disconnect action started;
```

reset (reset wireless modem)

```
< password >;reset;
Modem Reset will start soon;
```

apn (configure temporary APN)

```
< password >;apn;<new apn>;
```

mstatus (request modem status)

```
< password >;mstatus;
Service:< LTE|WCDMA >;RSSI:< value dbm >;SIM:< sim number in use >;State:< status
>;APN:< apn in use >;IP addr:< ip address when connected >
```

simswap (swap sim card temporary)

```
< password >;simswap;<timeout for sim to register in secs. max 180>;
Modem will reset to swap sim;
```

info (request device information)

```
< password >;info;
Model: < Nodegrid model >; Serial Number: < Nodegrid serial number >; Version: <
firmware version >;
```

reboot (reboot Nodegrid device)

```
< password >;reboot;
Nodegrid will reboot soon;
```

factorydefault (restore Nodegrid configuration to factory default)

```
< password >;factorydefault;
Nodegrid will restore configuration to factory default and reboot;
```

Whitelist sub-tab

On the table, administrators can add, delete, or change phone numbers which can send SMS action triggers. Requests from all other phone numbers are ignored.

SMS Whitelist

Setting	Data type	Description
Name	String	Name
Phone Number	Phone Number	Allowed Phone Number

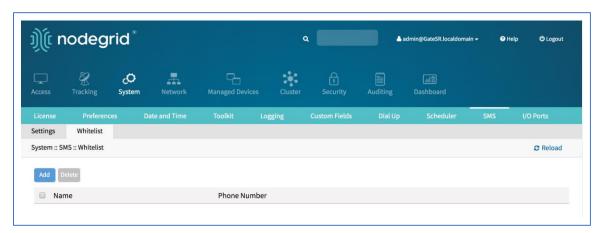

NOTE: If the whitelist table is empty then requests from all phone numbers are accepted.

Add Entry to Whitelist

WebUI Procedure

1. Go to System :: SMS :: Whitelist.

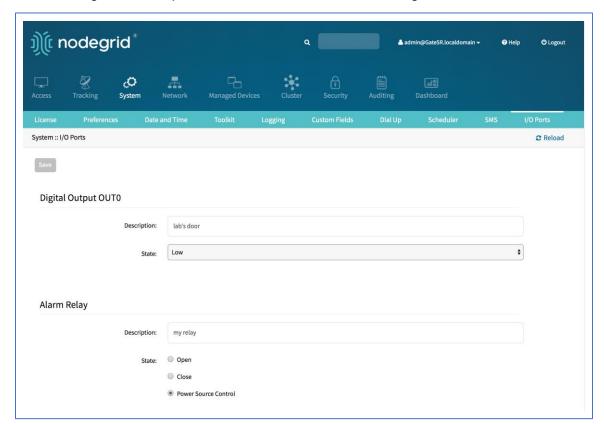

- 2. Click Add (displays dialog).
- Enter Name.
- 4. Enter Phone Number.
- 5. Click Save.

I/O Ports tab (only with GPIO)

NOTE: This tab is displayed only if the Nodegrid device is equipped with GPIO (Digital I/O ports).

This sets the configuration of the state of digital outputs and DIO0/DIO1 as input or output. When DIO0/DIO1 is configured as output, the state can be set to Low or High.

Network Section

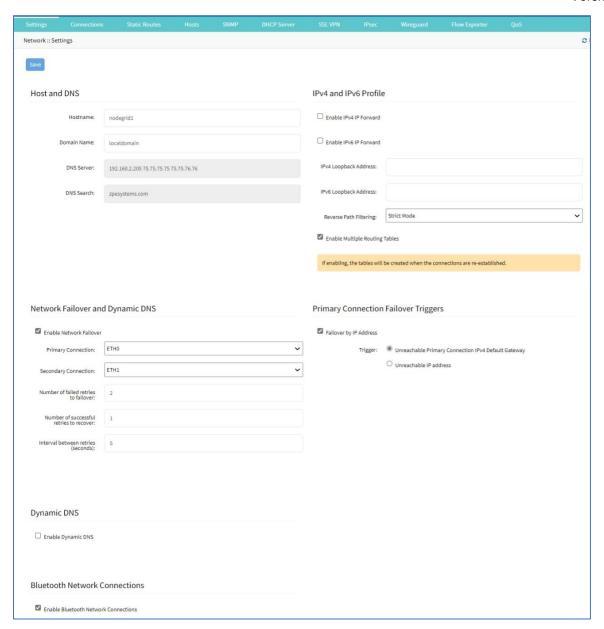

Administrators can configure and adjust all network-related settings, including network configuration, LTE, WIFI interfaces, bounding, and VLAN details.

NOTE: Nodegrid currently supports the FRRouting suite. For more information, please see http://docs.frrouting.org/en/latest/

Settings tab

Administrators can define the units host and domain name, configure Network Failover between multiple interfaces, enable IP Forwarding and configure a loopback address.

Configure Settings

WebUI Procedure

- 1. Go to Network :: Settings.
- 2. In the Host & DNS menu:

Enter Hostname.

Enter Domain Name.

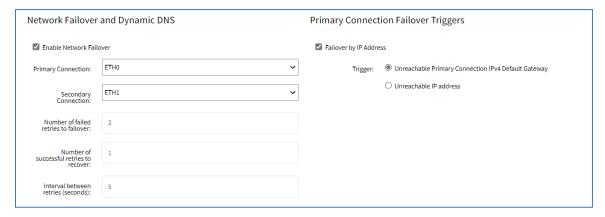

(DNS Server and DNS Search are read-only.)

3. In Network Failover and Dynamic DNS menu:

The network failover option allows administrators to automatically failover between two and three different network interfaces.

Select **Enable Network Failover** checkbox (displays dialog).

On **Primary Connection** drop-down, select one (ETH0, ETH1, hotspot).

On **Secondary Connection** drop-down, select one (ETH0, ETH1, hotspot).

Enter Number of failed retries to failover.

Enter Number of successful retries to recover:

Enter Interval between retries (seconds)

In Primary Connection Failover Triggers menu (the selection depends on type of Nodegrid device):

Select Failover by IP Address checkbox.

In *Trigger* menu, select one:

Unreachable Primary Connection IPv4 Default Gateway radio button

Unreachable IP address radio button - then enter Address.

(Following displays only when wireless connections are available.)

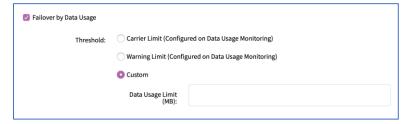

Select **Failover by Signal Strength** checkbox (triggered when signal strength drops below a user-defined percentage).

Enter Signal Strength (%) value.

Select Failover by Data Usage checkbox (triggered when one of these limits are met):

In Threshold menu, select one:

Carrier Limit (Configured on Data Usage Monitoring) radio button

Warning Limit (Configured on Data Usage Monitoring) radio button

NOTE: For more information on APNs, please see https://support.zpesystems.com/portal/kb/articles/what-is-the-apn-for-my-nsr-or-bsr-to-connect-to-4g-lte for details on how to configure Carrier and Warning limits.

Select Failover by Schedule checkbox (triggers on a set schedule).

Custom radio button - enter Data Usage Limit (MB) value.

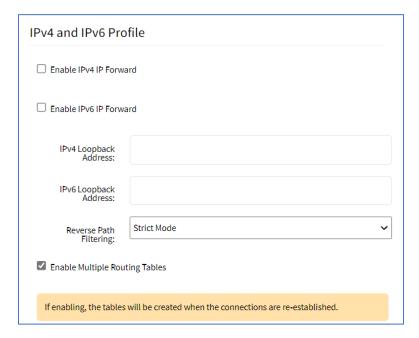

Enter Schedule value

(# # # # #, separated by word space) Sequence: *minute* (0-59), *hour* (0-23), *day of month* (0-30), *month* (0-11), *day of week* (0-6)

Enter Time to Failback (hours) value.

4. In *IPv4* and *IPv6* Profile menu (select one or both IP Forwards to route network traffic between network interfaces):

Select Enable IPv4 IP Forward checkbox

Select Enable IPv6 IP Forward checkbox

Enter IPv4 Loopback Address (address is assigned a bitmask of /32)

Enter IPv6 Loopback Address (address is assigned a bitmask of /128)

On Reverse Path Filtering drop-down, select one.

Disabled (No source address validation is performed.)

Strict Mode (Each incoming packet is tested against the routing table and if the interface represents the best return path. If the packet cannot be routed or is not the best return path. it is dropped.)

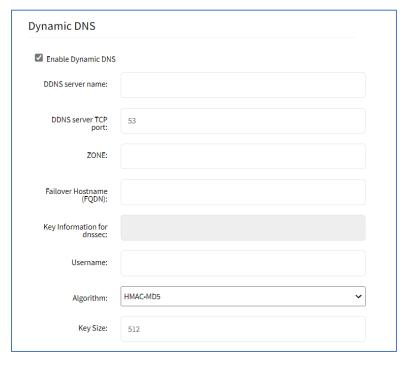

Loose Mode (Each incoming packet is tested only against the route table. If the packet cannot be routed, it gets dropped. This allows for asymmetric routing scenarios.)

NOTE: With Reverse Path Filtering, administrators can configure device behavior. By default, this is set to Strict Mode (recommended for most environments with protection against some forms of DDoS attacks). This value may need to be changed because of dynamic routing protocols or other network setup scenarios.

Select **Enable Multiple Routing Tables** checkbox (if selected, tables created when connections reestablished).

5. In *Dynamic DNS* menu:

6. (as needed) Select **Enable Dynamic DNS** checkbox (expands selections).

Enter **DDNS** server name.

Enter **DDNS server TCP port**.

Enter ZONE.

Enter Failover Hostname (FQDN).

Key Information for dnssec (read only)

Enter Username.

On Algorithm drop-down value, select one. (HMAC-MD5, HMAC-SHA1, HMAC-SHA224, HMAC-SHA256, HMAC-SHA384, HMAC-SHA512).

Enter **Key Size** value.

7. In Blue Tooth Network Connections (applies only if Bluetooth is enabled):

Select Enable Bluetooth Network Connections.

8. Click Save.

Connection tab

Administrators can edit, add, and delete existing network configurations. All existing physical interfaces are automatically added.

General Network Connection Information

Network Switch Configuration

Users can configure the built-in network switch. Supported functions include enable/disable individual ports, as well as creation of tagged (access) and untagged (trunk) ports.

Each card that provides network connectivity (Backplane 0/1 and SFP0/1) are directly connected to the switch. By default, the interfaces Backplane0/1 and SFP0/1 are active. By default, these can provide or consume ZTP, PXE and DHCP requests. By default, all other network interfaces are disabled.

All ports belong to VLAN1 and provide direct communication between enabled interfaces, except Backplane1 and SFP1 (which belong to VLAN2).

Switch Interfaces

These provide an overview of all switch ports, current status, and allow enable/disable. Current VLAN associates (tagged and untagged) are shown and Port VLAN IDs can be configured.

The Port VLAN ID is assigned to all incoming untagged packets. Then, the Port VLAN ID is used to forward packets to other ports which match that VLAN ID.

The switch port interface identifies the VLAN interfaces to which a port belongs. For most situations, a port is either an untagged port (equivalent to an access port) or a tagged port (equivalent to a trunk port).

802.1 support is available with the "Enable 802.1X" checkbox. Use the drop down menu to select the desired 802.1 profile. Profiles can be created within *Network :: Switch :: 802.1* configuration.

The following speeds are configurable within the NSR SFP0/SFP1 and 8-SFP card (depending on which transceivers are inserted):

Auto (reads SFP to configure 1G or 10G)

10G

1G (used with fiber or copper 1000BASE-T transceivers. Supports auto-negotiation: enabled or disabled)

10/100/1000 – (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is enabled.)

100M (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is disabled and speed is forced 100M.)

10M (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is disabled and speed is forced 10M.)

ACL

With the ACL (access control list) option, custom ACL rules can be managed (add, delete, edit) for each interface.

Untagged/Access Ports

To assign a port to a specific VLAN as an untagged or access port, enable the port and change the PORT VLAN ID to the desired VLAN. The port is automatically assigned to VLAN and untagged port.

NOTE: the VLAN must exist before the port can be assigned.

Tagged/Trunk Ports

Tagged ports accept incoming packets with VLAN tags. Tagged ports will accept any packet which belongs to an assigned VLAN. They are used to create a trunk connection between multiple switches. To assign a port as a tagged port, a minimum of one VLAN must be added to a port as tagged VLAN. This can be done on the VLAN configuration. The Port VLAN ID for a tagged port should match one of the assigned VLANs or be blank. Untagged traffic is not accepted by the port.

NOTE: the VLAN must exist before the port can be assigned.

Backplane Ports

Backplane settings control the switch interfaces directly exposed to the Nodegrid Platform. For the Nodegrid to communicate with any existing switch ports or VLANs, at least one of the backplane interfaces must be part of the specific VLAN. The backplane settings display the current VLAN associations. The Port VLAN IDs can be set for the backplane interfaces.

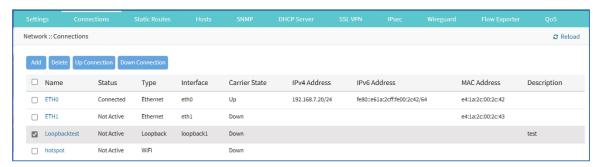

Physical Interfaces

Physical Interfaces

Interface	Model	Physical interface
ETH0	all	eth0
ETH1	Nodegrid Serial Consoles, Services Router	eth1
BACKPLANE0	Nodegrid Bold SR, Services Router, Gate SR	Backplane0 provides the connection to switch ports and sfp0 (Nodegrid Services Router).
BACKPLANE1	Nodegrid Services Router, Gate SR	Backplane1 provides the connection to sfp1.
SFP0	Nodegrid Gate SR	sfp0
SFP1	Nodegrid Gate SR	sfp1
hotspot	all	Interface is bound to wireless adapter (if available).

Manage Existing Network Connections

Edit Network Connection

WebUI Procedure

- 1. Go to Network: Connection.
- 1. In the Name column, click on the connection to be edited.
- 2. Make changes, as needed.
- 3. Click Save.

Delete Network Connection

WebUI Procedure

- 1. Go to Network :: Connection.
- 2. Select a connection checkbox.
- Click Delete.

Move Connection Up or Down

WebUI Procedure

- 1. Go to Network:: Connection.
- 2. Select a connection checkbox.
- 3. To move up, click **Up**.
- 4. To move down, click **Down**.

Create Interface Connections

Add Bonding Interface

With bonding interfaces, the system can bond two physical network interfaces to one interface. All physical interfaces in the bond act as one interface. This allows for an active failover between the two interfaces if an interface physical connection is interrupted.

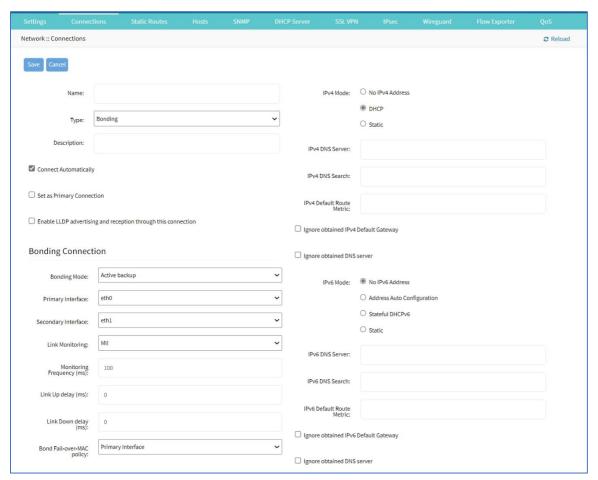

The built-in Network Failover can do the same. The main difference is that the built-in feature Network Failover works on the IP layer for more functionality. A bonding interface works on the link layer.

NOTE: The build function Network Failover and Bonding can be combined.

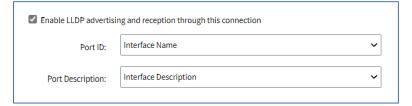

For the bonding interface, the administrator can define normal network settings (IP address, bitmask, and other settings).

- 1. Go to Network :: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On **Type** drop-down, select **Bonding**.
- 5. Enter **Description**.
- 6. Select Connect Automatically checkbox (connection is automatically established at startup).
- 7. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)
- 8. Select Enable LLD advertising and reception through this connection checkbox.

On Port ID drop-down, select one (Interface Name, Interface Index).

On **Port Description** drop-down, select one (Interface Description, Interface Name).

9. In Bonding Connection menu, the dialog modifies on the Bonding Mode drop-down selection:

Round Robin (packets transmitted in sequential order from first available slave through the last)

Enter Slave(s) interface (comma separated).

On Link Monitoring drop-down, select one (MII, ARP).

Enter Monitoring Frequency (ms) value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

Active Backup (Only one slave in the bond is active. A different slave becomes active if, and only if, the active slave fails.)

On **Primary Interface** drop-down, select interface.

On **Secondary Interface** drop-down, select interface.

On **Link Monitoring** drop-down, select one (**MII**, **ARP**).

Enter Monitoring Frequency (ms) value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

XOR load balancing (Transmit based on the selected transmit hash policy.)

Enter **Slave(s)** interface (comma separated).

On **Link Monitoring** drop-down, select one (**MII**, **ARP**).

Enter **Monitoring Frequency (ms)** value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

On Transmit Hash Policy drop-down, select one (Layer 2, Layer 2 and 3, Layer 3 and 4, Layer 2 and 3 and Encap, Layer 3 and 4 and Encap)

Broadcast (Transmits everything on all slave interfaces. This mode provides fault tolerances.)

Enter **Slave(s)** interface (comma separated).

On Link Monitoring drop-down, select one (MII, ARP).

Enter Monitoring Frequency (ms) value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

802.3ad(LACP) (IEEE 802.3ad Dynamic link aggregation. Creates aggregation groups that share the same speed and duplex settings. Utilizes all slaves in the active aggregator according to the 802.3ad specification. Slave selection for outgoing traffic is done according to the transmit hash policy.)

Enter **Slave(s)** interface (comma separated).

On Link Monitoring drop-down, select one (MII, ARP).

Enter **Monitoring Frequency (ms)** value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

Enter System Priority value.

Enter Actor MAC address.

Enter User Port Key.

On LACP rate drop-down, select one (Slow, Fast).

On Aggregation Selection Logic drop-down, select one (Stable, Bandwidth, Count).

On Transmit Hash Policy drop-down, select one (Layer 2, Layer 2 and 3, Layer 3 and 4, Layer 2 and 3 and Encap, Layer 3 and 4 and Encap)

Adaptive Transmit load balancing (Channel bonding that does not require any special switch support. Outgoing traffic is distributed according to the current load (computed relative to the speed) on each slave. Incoming traffic is received by the current slave.)

Enter Slave(s) interface (comma separated).

On Link Monitoring drop-down, select one (MII, ARP).

Enter **Monitoring Frequency (ms)** value (MII only).

Enter **Link Up delay (ms)** value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

On Transmit Hash Policy drop-down, select one (Layer 2, Layer 2 and 3, Layer 3 and 4, Layer 2 and 3 and Encap, Layer 3 and 4 and Encap)

Adaptive load balancing (Includes balance-TLB plus receive load balancing - RLB for IPV4 traffic. Does not require any special switch support. Receive load balancing is achieved by ARP negotiation.)

Enter **Slave(s)** interface (comma separated).

On **Link Monitoring** drop-down, select one (**MII**, **ARP**).

Enter Monitoring Frequency (ms) value (MII only).

Enter Link Up delay (ms) value (MII only).

Enter Link Down delay (ms) value (MII only).

On Bond Fail-over-MAC policy drop-down, select one (Primary Interface, Current Active Interface, Follow Active Interface).

10. In IPv4 Mode menu:

No IPv4 Address radio button.

DHCP radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Select Ignore obtained IPv4 Default Gateway checkbox.

Select Ignore obtained DNS server checkbox

11. In IPv6 Mode menu:

No IPv6 Address radio button

Address Auto Configuration radio button

Stateful DHCPv6 radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter Prefix Length.

(optional) Enter Gateway IP.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Select Ignore obtained IPv6 Default Gateway checkbox.

Select Ignore obtained DNS server checkbox.

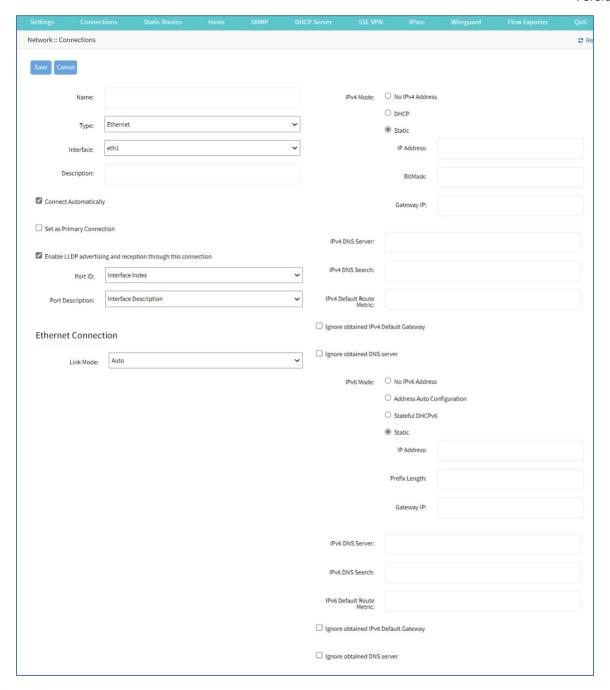

12. Click Save.

Add Ethernet Interface

Additional Ethernet interfaces can be added and configured when an additional physical interface is added. This can occur during a Nodegrid Manager installation, where the System might have more than two interfaces to better support network separation.

- 1. Go to Network:: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On **Type** drop-down, select **Ethernet**.
- 5. On Interface drop-down, select one.
- 6. Enter **Description**.
- 7. Select Connect Automatically checkbox (connection is automatically established at startup).
- 8. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)

9. Select Enable LLD advertising and reception through this connection checkbox.

On Port ID drop-down, select one (Interface Name, Interface Index).

On Port Description drop-down, select one (Interface Description, Interface Name).

10. In Ethernet Connection menu (if available):

On Link Mode drop-down, select one (10M/Half, 10M/Full, 100M/Half, 100M/Full, 1G/Full).

11. In IPv4 Mode menu:

No IPv4 Address radio button.

DHCP radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Select Ignore obtained IPv4 Default Gateway checkbox.

Select **Ignore obtained DNS server** checkbox

12. In IPv6 Mode menu:

No IPv6 Address radio button

Address Auto Configuration radio button

Stateful DHCPv6 radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter **Prefix Length**.

(optional) Enter Gateway IP.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Select Ignore obtained IPv6 Default Gateway checkbox.

Select Ignore obtained DNS server checkbox.

13. Click Save.

Add Mobile Broadband GSM Interface

Mobile Broadband interfaces can be configured when a mobile broadband modem is available to the device. The Nodegrid SR family (NSR, GSR, BSR, and LSR) support built-in modems available as optional add-ons. For all other units, external modems can be used.

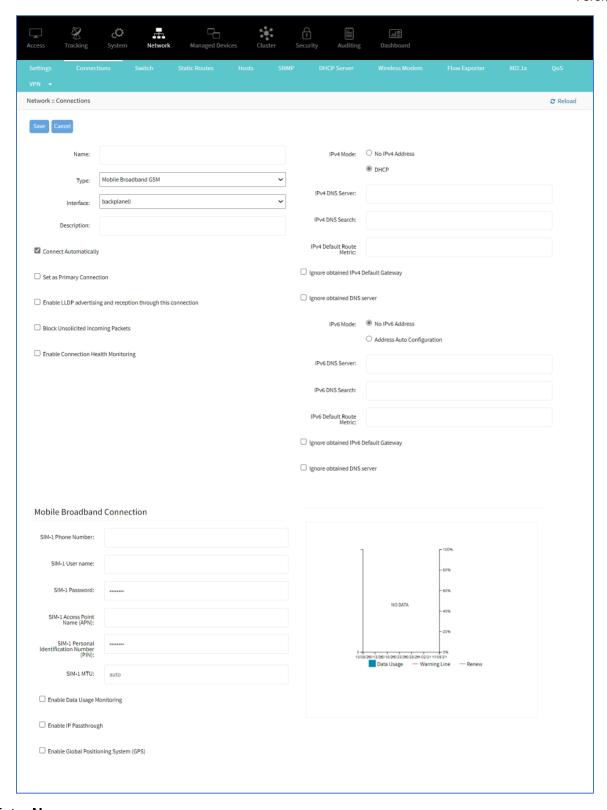

The created interfaces allow the system to establish an Internet connection most used for failover options. Users and remote systems can directly access the device through a mobile connection (if supported by the ISP).

NOTE: Built-in modems support Active-Passive SIM failover. SIM-2 settings are only supported for the built-in modems.

An APN (provided by the carrier) is required for all cellular connections. For more information on APNs, see https://support.zpesystems.com/portal/kb/articles/what-is-the-apn-for-my-nsr-or-bsr-to-connect-to-4q-lte.

- 1. Go to Network :: Connections.
- Click Add (displays dialog).

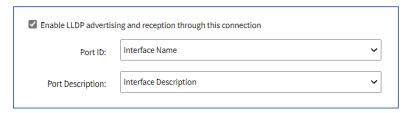

- 3. Enter Name.
- 4. On Type drop-down, select Mobile Broadband GSM.
- 5. On Interface drop-down, select one.

- 6. Enter **Description**.
- 7. Select **Connect Automatically** checkbox (connection is automatically established at startup).
- 8. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)
- 9. Select Enable LLD advertising and reception through this connection checkbox.

On **Port ID** drop-down, select one (Interface Name, Interface Index).

On **Port Description** drop-down, select one (Interface Description, Interface Name).

Select Block Unsolicited Incoming Packets checkbox.

10. In Ethernet Connection menu (if available):

On Link Mode drop-down, select one (Auto, 10M/Half, 10M/Full, 100M/Half, 100M/Full, 1G/Full).

11. In IPv4 Mode menu:

No IPv4 Address radio button.

DHCP radio button.

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Ignore obtained IPv4 Default Gateway checkbox.

Ignore obtained DNS server checkbox.

12. In IPv6 Mode menu:

No IPv4 Address radio button.

Address Auto Configuration radio button.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Ignore obtained IPv6 Default Gateway checkbox.

Ignore obtained DNS server checkbox.

13. In Mobile Broadband Connection menu:

Enter SIM-1 Phone Number.

Enter SIM-1 User name (User name to unlock the SIM).

Enter SIM-1 Password.

Enter SIM-1 Access Point Name (APN).

Enter SIM-1 Personal Identification Number (PIN).

Enter **SIM-1 MTU.** (bytes – can be set to 'auto' – equal to 1500 bytes).

Select Enable Data Usage Monitoring checkbox.

Enter SIM-1 Data Limit Value (GB) (monthly data limit).

Enter SIM-1 Data Warning (%) (percentage that triggers an alarm).

Enter SIM-1 Renew Day (day to reset accumulated data).

Select Enable IP Passthrough checkbox.

On **Ethernet Connection** drop-down, select one.

Enter **MAC Address** (if blank, the system uses DHCP to get the target device).

Enter **Port Intercepts** (any ports that should NOT pass through the Nodegrid device).

Select Enable Global Positioning System (GPS) checkbox.

Enter Polling Time (min).

On GPS Antenna drop-down, select one

Shared GPS/Rx diversity(aux) antenna

Dedicated Active GPS antenna

Dedicated Passive GPS antenna

(if applicable) Select Enable Second SIM card checkbox.

Repeat entries for SIM-2 settings. There is a setting **Active SIM card** that can designate SIM-2 as the primary SIM card.

14. Click Save.

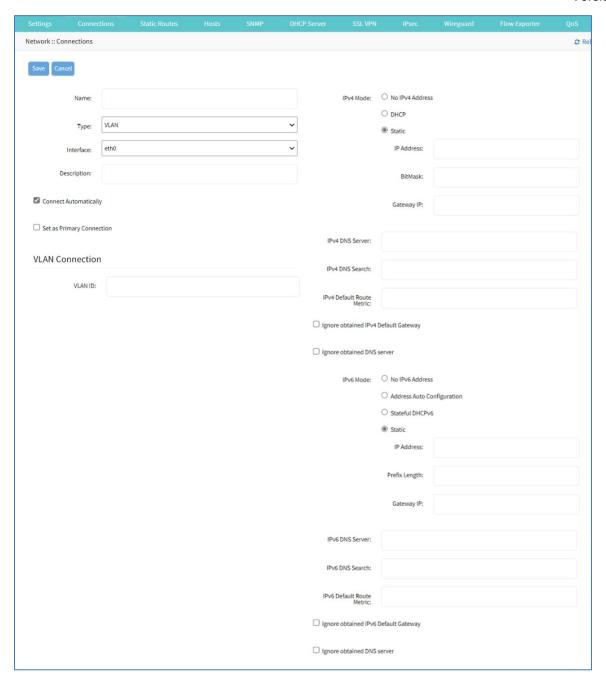

Add VLAN Interface

VLAN Interfaces allow the Nodegrid system to natively tag network traffic with a specific VLAN ID. For this, a VLAN Interface needs to be created. The VLAN interface will behave and allows the same settings as any other network interface on in Nodegrid solution. The new interface will be bound to a specific physical interface and the administrator as the ability to define the VLAN ID.

Ports can be assigned, as needed. By default, VLAN 1 and VLAN 2 exist. All ports belong to VLAN 1 except BACKPLANE1 and SFP1 (belongs to VLAN 2).

- 1. Go to Network :: Connections.
- 2. Click **Add** (displays dialog).

- 3. Enter Name.
- 4. On Type drop-down, select VLAN.
- 5. On **Interface** drop-down, select one.
- 6. Enter **Description**.
- 7. Select Connect Automatically checkbox (connection is automatically established at startup).
- 8. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)

9. In *Ethernet Connection* menu (if available):

On Link Mode drop-down, select one (Auto, 10M/Half, 10M/Full, 100M/Half, 100M/Full, 1G/Full).

- 10. In *VLAN Connection* menu, enter **VLAN ID**:
- 11. In *IPv4 Mode* menu, select one:

No IPv4 Address radio button.

DHCP radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Select Ignore obtained IPv4 Default Gateway checkbox.

Select **Ignore obtained DNS server** checkbox

12. In IPv6 Mode menu:

No IPv6 Address radio button

Address Auto Configuration radio button

Stateful DHCPv6 radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter **Prefix Length**.

(optional) Enter Gateway IP.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Select Ignore obtained IPv6 Default Gateway checkbox.

Select Ignore obtained DNS server checkbox.

13. Click Save.

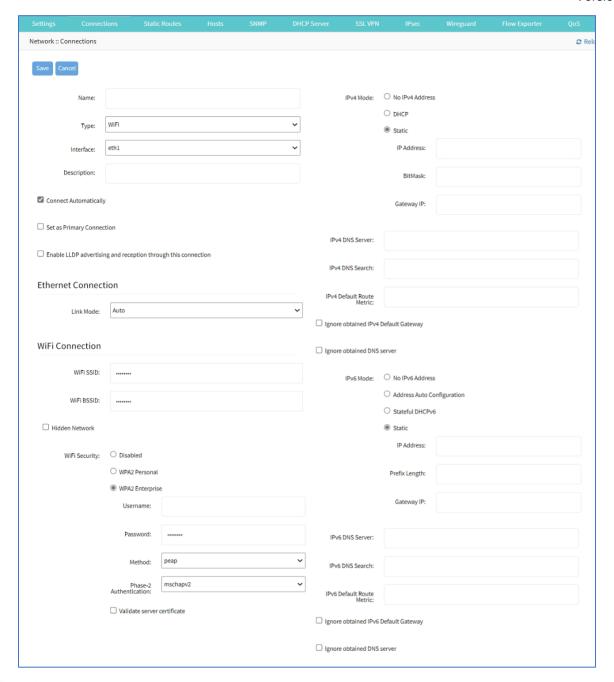

Add WiFi Interface

The System support a Nodegrid device as a WiFi client or access point. A compatible WiFi module must be installed.

By default, a hotspot interface is defined which configures the device as an access point (if a WiFi module is present). To use the Nodegrid as an access point, update the values. The default password of the hotspot connection is the device serial number.

- 1. Go to Network :: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On Type drop-down, select WiFi.
- 5. On Interface drop-down, select one.
- 6. Enter **Description**.
- 7. Select Connect Automatically checkbox (connection is automatically established at startup).
- 8. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)
- 9. Select Enable LLD advertising and reception through this connection checkbox.

On Port ID drop-down, select one (Interface Name, Interface Index).

On Port Description drop-down, select one (Interface Description, Interface Name).

10. In Ethernet Connection menu (if available):

On Link Mode drop-down, select one (Auto, 10M/Half, 10M/Full, 100M/Half, 100M/Full, 1G/Full).

11. In WiFi Connection menu:

Enter WiFi SSID.

Enter WiFi BSSID (MAC address of the Access Point)

Select Hidden Network checkbox (if applicable).

In WiFi Security menu (select one):

Disabled radio button

WPA2 Personal radio button (if selected, displays). Enter WPA shared key.

WPA2 Enterprise radio button (if selected, displays):

Enter **Username**.

Enter Password.

On Method drop-down, select one.

On Phase 2 Authentication drop-down, select one.

Select Validate server certificate checkbox.

12. In IPv4 Mode menu, select one:

No IPv4 Address radio button.

DHCP radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Select Ignore obtained IPv4 Default Gateway checkbox.

Select **Ignore obtained DNS server** checkbox

13. In IPv6 Mode menu:

No IPv6 Address radio button

Address Auto Configuration radio button

Stateful DHCPv6 radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter **Prefix Length**.

(optional) Enter Gateway IP.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Ignore obtained IPv6 Default Gateway checkbox.

Ignore obtained DNS server checkbox.

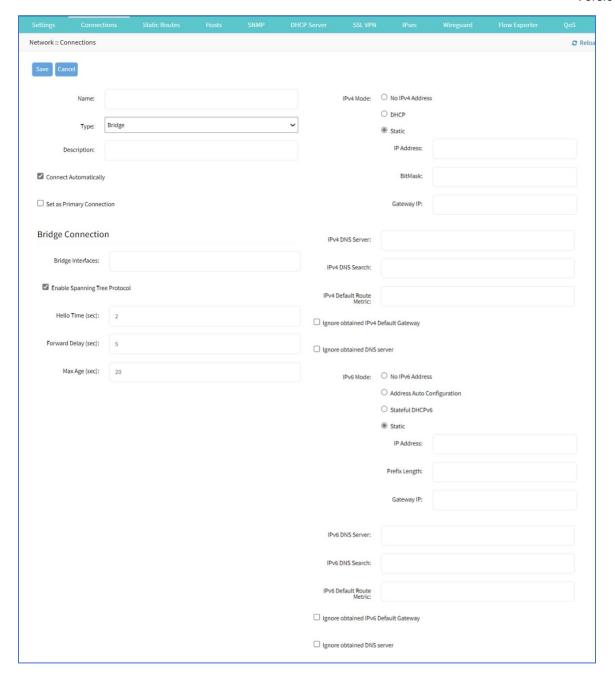

14. Click Save.

Add Bridge Interface

With Bridge interfaces, the System can create a virtual switch that crosses one or more interfaces. The switch is completely transparent to the network interfaces and does not require additional setup. The most common use for a bridge network is easy network access for any running NFV (outside as well as the Nodegrid System). Bridge network interfaces use the same network configuration options as all Ethernet interfaces.

- 1. Go to Network: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On **Type** drop-down, select **Bridge**.
- Enter **Description**.
- 6. Select Connect Automatically checkbox (connection is automatically established at startup).
- 7. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)
- 8. In Bridge Connection menu:

Enter **Bridge Interfaces** (comma-separated list of physical interfaces).

Select Enable Spanning Tree Protocol checkbox.

Enter **Hello Time (sec)** (number of seconds a HELLO packet is sent when Spanning Tree is enabled).

Enter Forward Delay (sec) (packet forward delay when Spanning Tree is enabled).

Enter Max Age (sec) (maximum age for packages when Spanning Tree is enabled).

9. In IPv4 Mode menu, select one:

No IPv4 Address radio button.

DHCP radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

(optional) Enter IPv4 DNS Server.

Enter IPv4 DNS Search (defines a domain name for DNS lookups).

Enter IPv4 Default Route Metric.

Select Ignore obtained IPv4 Default Gateway checkbox.

Select **Ignore obtained DNS server** checkbox

10. In IPv6 Mode menu:

No IPv6 Address radio button

Address Auto Configuration radio button

Stateful DHCPv6 radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter **Prefix Length**.

(optional) Enter Gateway IP.

(optional) Enter IPv6 DNS Server.

Enter IPv6 DNS Search (defines a domain name for DNS lookups).

Enter IPv6 Default Route Metric.

Select Ignore obtained IPv6 Default Gateway checkbox.

Select Ignore obtained DNS server checkbox.

11. Click Save.

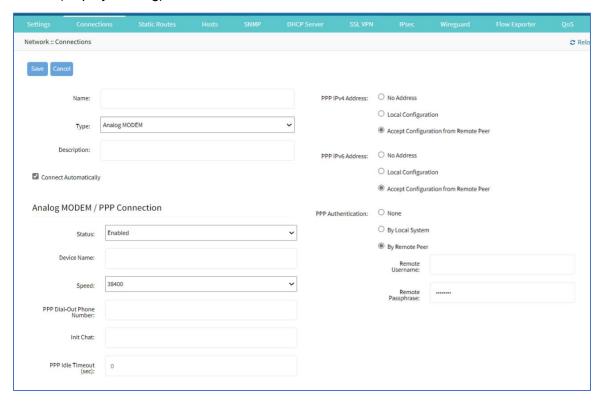

Add Analog Modem Interface

With the analog modem interface, administrators can configure an existing analog modem and required PPP connection details. A supported analog modem must be connected to the Nodegrid System.

WebUI Procedure

- 1. Go to Network :: Connections.
- Click Add (displays dialog).

- 3. Enter Name.
- 4. On **Type** drop-down, select **Analog MODEM**.
- 5. Enter **Description**.
- Select Connect Automatically checkbox (connection is automatically established at startup).
- 7. In Analog MODEM / PPP Connection menu:

On Status drop-down, select one (Enabled, Disabled).

Enter Device Name.

On Speed drop-down, select one (9600, 19200, 38400, 57600, 115200).

Enter PPP Dial-Out Phone Number.

Enter Init Chat (a specific AT init string, if required).

Enter **PPP Idle Timeout (sec)** (connection idle timeout after which the connection is automatically disconnected. 0 sec = connection is not automatically disconnected.)

8. In PPP IPv4 Address menu (select one):

No Address radio button

Local Configuration radio button (displays):

Enter Local Address.

Enter Remote Address.

Accept Configuration from Remote Peer radio button

9. In PPP IPv6 Address menu (select one):

No Address radio button

Local Configuration radio button (displays)

Enter Local Address (LL).

Enter Remote Address (LL).

Accept Configuration from Remote Peer radio button

10. In PPP Authentication menu:

None radio button

By Local System radio button (displays):

On Authentication Protocol drop-down, select one (PAP, CHAP, EAP).

By Remote Peer radio button (displays):

Enter Remote Username.

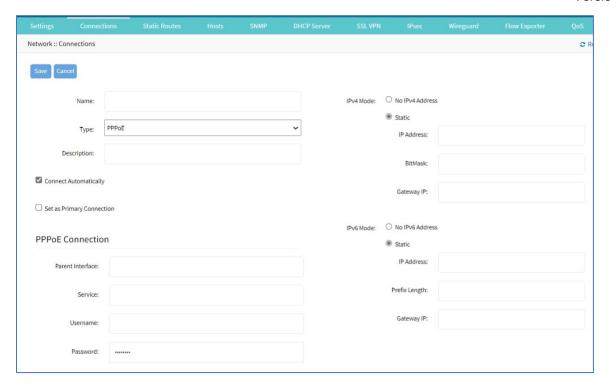

Enter Remote Passphrase.

11. Click Save.

Add PPPoE Interface

- 1. Go to Network :: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On Type drop-down, select PPPoE.
- 5. Enter **Description**.
- 6. Select Connect Automatically checkbox (connection is automatically established at startup).
- 7. Select **Set as Primary Connection** (defines interface as the primary connection. Only one interface can be the primary.)
- 8. In PPPoE Connection menu:

Enter Service.

Enter Username.

Enter Password.

9. In IPv4 Mode menu, select one:

No IPv4 Address radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

10. In IPv6 Mode menu:

No IPv6 Address radio button

Static radio button (if selected, displays):

Enter IP Address.

Enter Prefix Length.

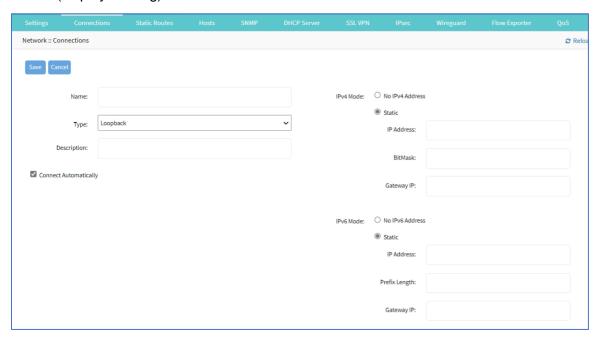

(optional) Enter Gateway IP.

11. Click Save.

Add Loopback Interface

WebUI Procedure

- 1. Go to Network:: Connections.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On Type drop-down, select Loopback.
- 5. Enter **Description**.
- 6. Select Connect Automatically checkbox (connection is automatically established at startup).
- 7. In IPv4 Mode menu, select one:

No IPv4 Address radio button.

Static radio button (if selected, displays):

Enter IP Address.

Enter BitMask.

(optional) Enter Gateway IP:

8. In IPv6 Mode menu:

No IPv6 Address radio button

Static radio button (if selected, displays):

Enter IP Address.

Enter **Prefix Length**.

(optional) Enter Gateway IP.

9. Click Save.

Switch tab (NSR, GSR, BSR)

These functions are only available on Nodegrid NSR, GSR, BSR devices.

Users can configure the built-in network switch. Supported functions include enable/disable individual ports, as well as creation of tagged (trunk) and untagged (access) ports.

Each card that provides network connectivity (Backplane 0/1 and SFP0/1) are directly connected to the switch. By default, the interfaces Backplane0/1 and SFP0/1 are active. By default, these can provide or consume ZTP, PXE and DHCP requests. By default, all other network interfaces are disabled.

All ports belong to VLAN1 and provide direct communication between enabled interfaces, except Backplane1 and SFP1 (which belong to VLAN2).

Physical Interfaces

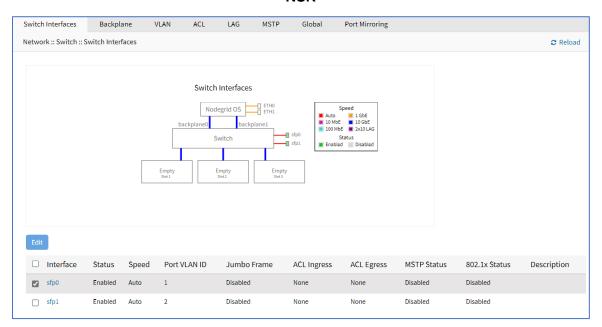

Connection	Model	Physical interface
ETH0	all	eth0
ETH1	Nodegrid NSC, NSR	eth1
BACKPLANE0	Nodegrid NSR, BSR, GSR	NSR: backplane0 is in the same VLAN as SFP0 and switch ports by default GSR, BSR: backplane0 is in the same VLAN as SFP0 and switch ports by default
BACKPLANE1	Nodegrid NSR, GSR	NSR: backplane1 is in the same VLAN as SFP1 by default GSR: backplane1 is not in any VLAN by default
SFP0	Nodegrid GSR, NSR	GSR: sfp0 NSR: SFP0 is in the same VLAN as backplane0 and switch ports by default
SFP1	Nodegrid GSR, NSR	GSR: sfp1 NSR: SFP1 is connected to backplane1 by default
hotspot	all	Interface is bound to wireless adapter (if available).

Switch Interfaces sub-tab

These provide an overview of all switch ports, current status, and allow enable/disable. Current VLAN associates (tagged and untagged) are shown and Port VLAN IDs can be configured.

NSR

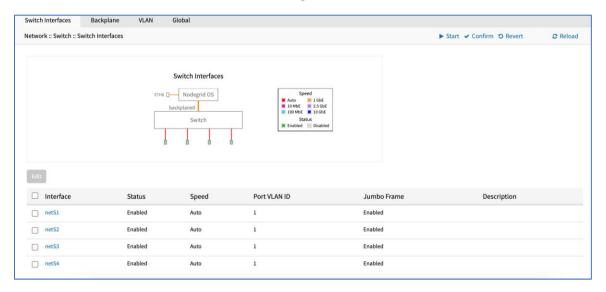

GSR

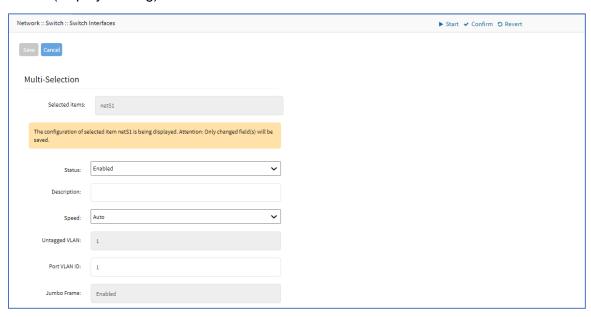

BSR

Edit Switch Port Interface (BSR, GSR)

WebUI Procedure

- 1. Go to Network :: Switch :: Switch Interfaces.
- 2. In the table, select checkbox.
- 3. Click Edit (displays dialog).

4. As needed, make changes:

Status drop-down (enabled, disabled).

Description.

Speed drop-down (Auto, 10M, 100M, 1G).

©2022 ZPE Systems, Inc.

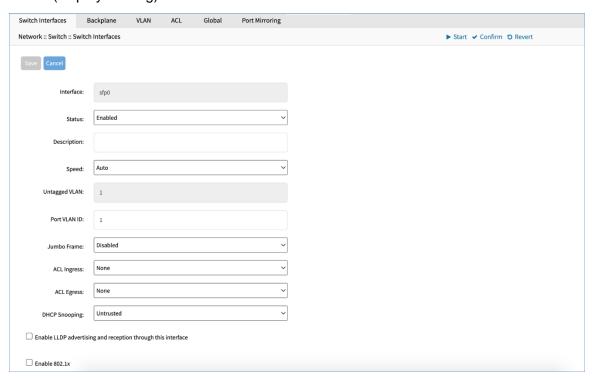

Port VLAN ID.

5. Click Save.

Edit Switch Port Interface (NSR)

WebUI Procedure

- 1. Go to Network :: Switch :: Switch Interfaces.
- 2. In the table, select checkbox.
- 3. Click Edit (displays dialog).

4. As needed, make changes:

Status drop-down (enabled, disabled).

Description.

Speed drop-down (Auto, 10M, 100M, 1G, 10G).

Port VLAN ID.

Jumbo Frame drop-down (enabled, disabled).

(if available) ACL Ingress drop-down (select one).

(if available) ACL Egress drop-down (select one).

Enable LLDP advertising and reception through this interface checkbox.

Enable 802.1x checkbox.

5. Click Save.

Backplane sub-tab

Backplane settings control the switch interfaces directly exposed to the Nodegrid Platform. For the Nodegrid to communicate with any existing switch ports or VLANs, at least one of the backplane interfaces must be part of the specific VLAN. The backplane settings display the current VLAN associations. The Port VLAN IDs can be set for the backplane interfaces.

NOTE: Display varies depending on device – GSR, BSR, or NSR).

Edit Backplane Settings

WebUI Procedure

- 1. Go to Network :: Switch :: Backplane.
- 2. In backplane0, make changes, as needed:

Enter Port VLAN ID.

(if active) On Jumbo Frame drop-down, select one (Enabled, Disabled).

3. In backplane1, make changes, as needed:

Enter Port VLAN ID.

(if active) On Jumbo Frame drop-down, select one (Enabled, Disabled).

4. (if shown) In *Slot1-0*, make changes, as needed (displays if a compute card is present in slot 1):

Enter Port VLAN ID.

(if active) On **Jumbo Frame** drop-down, select one (**Enabled**, **Disabled**).

5. (if shown) In *Slot1-1*, make changes, as needed (displays if a compute card is present in slot 1):

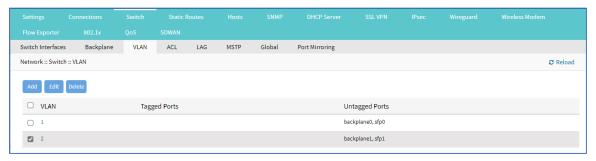

Enter Port VLAN ID.

(if active) On Jumbo Frame drop-down, select one (Enabled, Disabled).

6. Click Save.

VLAN sub-tab

The Port VLAN ID is assigned to all incoming untagged packets. Then, the Port VLAN ID is used to forward packets to other ports which match that VLAN ID.

The switch port interface identifies the VLAN interfaces to which a port belongs. For most situations, a port is either an untagged port (equivalent to an access port) or a tagged port (equivalent to a trunk port).

802.1 support is available with the "Enable 802.1X" checkbox. Use the drop down menu to select the desired 802.1 profile. Profiles can be created within *Network :: Switch :: 802.1* configuration.

The following speeds are configurable within the NSR SFP0/SFP1 and 8-SFP card (depending on which transceivers are inserted):

Auto (reads SFP to configure 1G or 10G)

10G

1G (used with fiber or copper 1000BASE-T transceivers. Supports auto-negotiation: enabled or disabled)

10/100/1000 – (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is enabled.)

100M (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is disabled and speed is forced 100M.)

10M (used with copper 10/100/1000BASE-T transceivers. Auto-negotiation is disabled and speed is forced 10M.)

Untagged/Access Ports

To assign a port to a specific VLAN as an untagged or access port, enable the port and change the PORT VLAN ID to the desired VLAN. The port is automatically assigned to VLAN and untagged port.

NOTE: the VLAN must exist before the port can be assigned.

Tagged/Trunk Ports

Tagged ports accept incoming packets with VLAN tags. Tagged ports will accept any packet which belongs to an assigned VLAN. They are used to create a trunk connection between multiple switches. To assign a port as a tagged port, a minimum of one VLAN must be added to a port as tagged VLAN. This can be done on the VLAN configuration. The Port VLAN ID for a tagged port should match one of the assigned VLANs or be blank. Untagged traffic is not accepted by the port.

NOTE: the VLAN must exist before the port can be assigned.

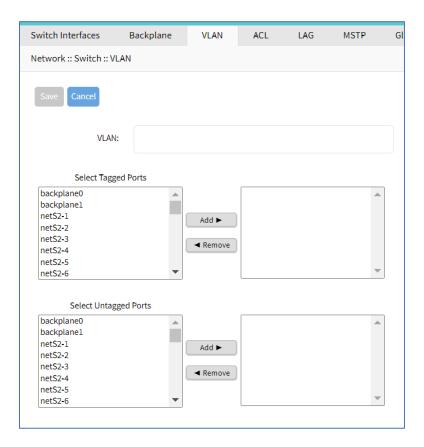

Add VLAN

WebUI Procedure

1. Go to Network :: Switch :: VLAN.

2. Click **Add** (displays dialog).

- 3. Enter VLAN.
- In Select Tagged Ports, select from left-side panel, click Add► to move to right-side panel.
 To remove from right-side panel, select and click ◀Remove.
- In Select Untagged Ports, select from left-side panel, click Add▶ to move to right-side panel.
 To remove from right-side panel, select and click ◀Remove.
- 6. Click Save.

Edit VLAN

WebUI Procedure

- 1. Go to Network :: Switch :: VLAN.
- 2. Select checkbox next to item to edit.
- 3. Click Edit (displays dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete VLAN

WebUI Procedure

1. Go to Network :: Switch :: VLAN.

©2022 ZPE Systems, Inc.

- 2. Select checkbox next to item to delete.
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

ACL sub-tab

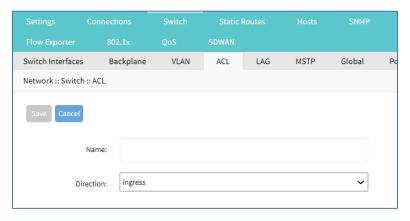

With the ACL (access control list) option, custom ACL rules can be managed (add, delete, edit) for each interface.

Add ACL

WebUI Procedure

- 1. Go to Network :: Switch :: ACL.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On **Direction** drop-down, select one (**ingress**, **egress**).
- Click Save.

Edit ACL

- 1. Go to Network :: Switch :: ACL.
- 2. Select checkbox next to item to edit.
- 3. Click Edit (displays dialog).

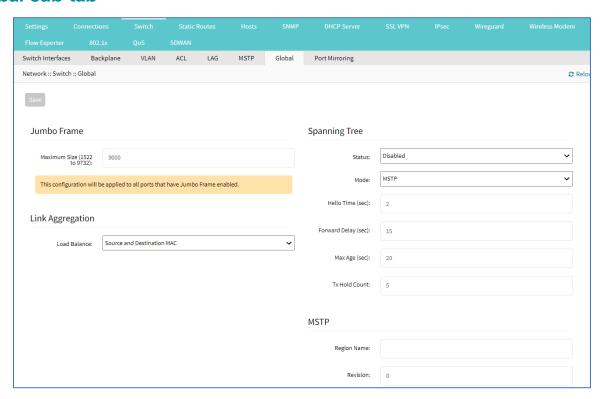

- 4. Make changes, as needed.
- 5. Click Save.

Delete ACL

WebUI Procedure

- 1. Go to Network :: Switch :: ACL.
- 2. Select checkbox next to item to delete.
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

Global sub-tab

Edit Global Settings

WebUI Procedure

- 1. Go to Network :: Switch :: Global.
- 2. In Jumbo Frame menu:

Enter Maximum Size (1522 to 9732).

3. In Link Aggregation menu:

In Load Balance drop-down, select one (Source and Destination IP, Source and Destination MAC, Source and Destination MAC and IP, Source and Destination MAC and IP and TCP/UDP Ports).

4. In Spanning Tree menu:

In Status drop-down, select one (Enabled, Disabled).

In Mode drop-down, select one.

Enter Hello Time (sec).

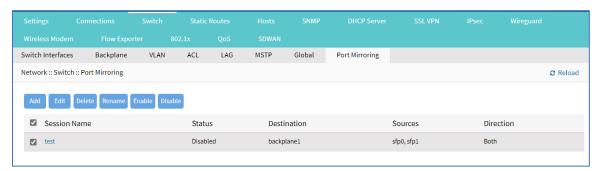

Enter Forward Delay (sec).

Enter Max Age (sec).

Enter Tx Hold Count.

5. Click Save.

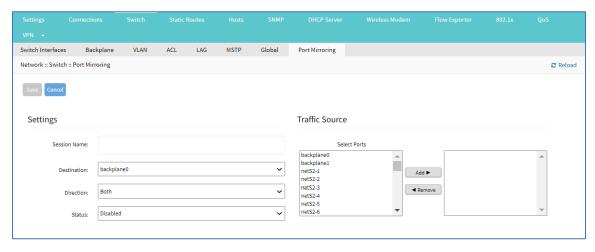

Port Mirroring sub-tab

Add Port Mirroring

WebUI Procedure

- 1. Go to Network :: Switch :: Port Mirroring.
- 2. Click Add (displays dialog).

3. In Settings menu:

Enter Session Name.

On Destination drop-down, select one (backplane0, backplane1, netS2-(1-16), netS3-(1-8), netS4-(1-16), sfp0, sfp1, slot1-0, slot1-1).

On Direction drop-down, select one (Both, Egress, Ingress).

On Status drop-down, select one (Disabled, Enabled).

4. In Traffic Source menut:

On *Traffic Source*, select from left-side panel, click **Add** ► to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

5. Click Save.

Edit Port Mirroring

WebUI Procedure

- 1. Go to Network :: Switch :: Port Mirroring.
- 2. In Session Name column, select checkbox.
- 3. Click Edit.
- 4. Make changes, as needed.
- 5. Click Save.

Delete Port Mirroring

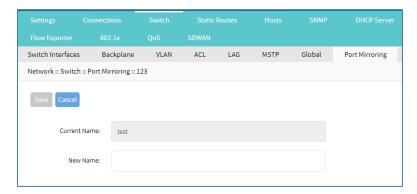

WebUI Procedure

- 1. Go to Network :: Switch :: Port Mirroring.
- 2. In Session Name column, select checkbox.
- 3. Click Delete.
- 4. On confirmation pop-up dialog, click **OK**.

Rename Port Mirroring

- 1. Go to Network :: Switch :: Port Mirroring.
- 2. In Session Name column, select checkbox.
- 3. Click Rename (displays dialog).

- 4. Enter New Name.
- Click Save.

Enable/Disable Port Mirroring

WebUI Procedure

- 1. Go to Network :: Switch :: Port Mirroring.
- 2. In Session Name column, select checkbox.
- 3. Click Enable. (to enable port mirroring).
- 4. Click **Disable** (to disable port mirroring).

Static Routes tab

Administrators can define and manage static routes. Routes can be created for IPv4 and IPv6, assigned to specific network interfaces.

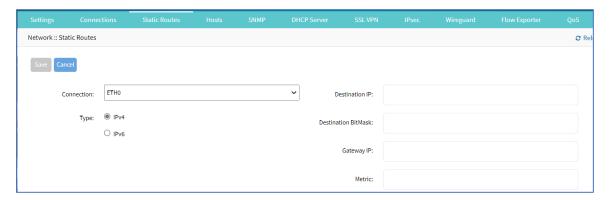

Manage Static Routes

Add Static Route

- 1. Go to Network :: Static Routes.
- 2. Click Add (displays dialog).

- 3. On Connection drop-down, select one (ETH0, ETH1, hotspot).
- 4. In *Type* menu, select one:

IPv4

IPv6

- 5. Enter Destination IP.
- 6. Enter Gateway IP.
- 7. Enter **Metric** (routing metric value for normal routes default = 100)
- 8. Click Save.

Edit Static Route

WebUI Procedure

- 1. Go to Network :: Static Routes.
- 2. In the *Index* column, click on the name.
- 3. On the dialog, make changes as needed.
- 4. Click Save.

Delete Static Route

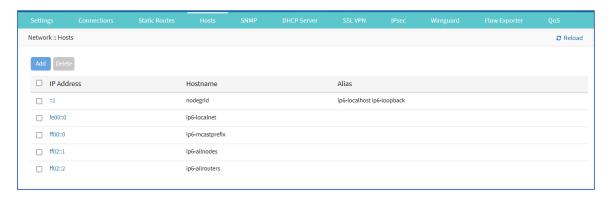

WebUI Procedure

- 1. Go to Network :: Static Routes.
- 2. In the list, select a checkbox.
- 3. Click Delete.

Hosts tab

Administrators can configure and manage manual hostname definitions (equivalent to entries in the host's file).

Manage Hosts

Add Host

WebUI Procedure

- 1. Go to Network :: Hosts.
- 2. Click Add (displays dialog).

- 3. Enter IP Address (IPv4, IPv6 formats supported.)
- 4. Enter Hostname.
- 5. Enter Alias.
- 6. Click Save.

Edit Host

WebUI Procedure

- 1. Go to Network :: Hosts.
- 2. In the *Index* column, click on the name.
- 3. On the dialog, make changes as needed.
- 4. Click Save.

Delete Host

- 1. Go to Network :: Hosts.
- 2. In the list, select a checkbox.
- 3. Click Delete.

SNMP tab

Administrators can configure SNMP settings here.

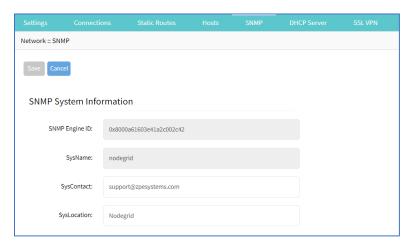

Manage SNMP

Review/edit System Information

WebUI Procedure

- 1. Go to Network :: SNMP.
- 2. Click System.

3. Two fields can be edited:

SysContact (email address)

SysLocation (location name)

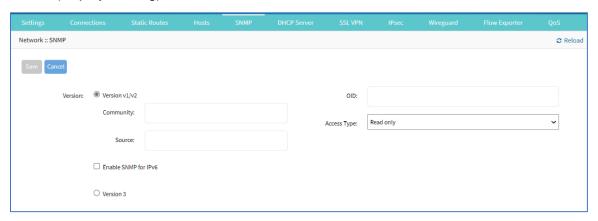

- 4. If changed, click Save.
- 5. If not, click Cancel to return to table.

Add Community/Username

WebUI Procedure

- 1. Go to Network :: SNMP.
- 2. Click Add (displays dialog).

3. In Version menu (select one):

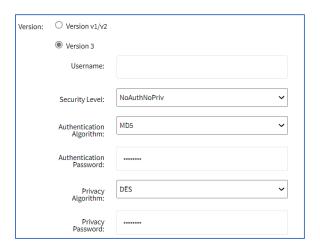

Version V1/V2 radio button

Enter Community.

Enter Source.

(if applicable) Select Enable SNMP for IPv6 checkbox

Version 3 radio button

Enter Username.

On Security Level drop-down, select one (NoAuthNoPriv, AuthNoPriv, AuthPriv).

On Authentication Algorithm drop-down, select one (MD5, SHA, SHA-224, SHA-256, SHA-384, SHA-512).

Enter Authentication Password.

On Privacy Algorithm drop-down, select one (DES, AES, AES-192, AES-256). Enter Privacy Password.

- 4. Enter OID.
- 5. On Access Type drop-down, select one (Read and Write, Read Only).
- 6. Click Save.

Edit Community/Username

WebUI Procedure

- 1. Go to Network :: SNMP.
- 2. On Community or Username column, click a name.
- 3. Make changes, as needed.
- 4. Click Save.

Delete Community/Username

WebUI Procedure

- 1. Go to Network :: SNMP.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

DHCP Server tab

The DHCP server for target devices can be configured and managed. By default, the DHCP server is not configured or active. When a DHCP scope is defined, the system serves IP addresses to all target devices connected to the interface and which match the general DHCP scope.

Configuration is a two-step process. First, the general DHCP scope and configuration is configured and created. Then, IP address ranges (Network Range) are defined to be used as server IP addresses and as IP address reservations for specific hosts.

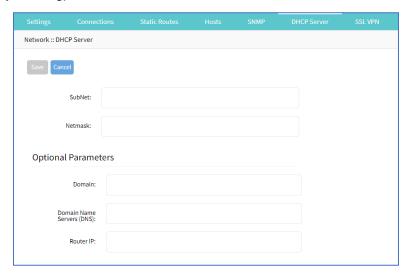

Manage DHCP Server

Add DHCP Server

- 1. Go to Network :: DHCP Server.
- 2. Click Add (displays dialog).

- 3. Enter **Subnet** (must match the settings of a configured interface).
- 4. Enter **Netmask** (defined subnet format: xxx.xxx.xxx).
- 5. In Optional Parameters menu:

Enter **Domain**.

Enter Domain Name Services (DNS).

Enter Router IP.

6. Click Save.

Edit DHCP Server

WebUI Procedure

- 1. Go to Network :: DHCP Server.
- 2. On Subnet/Netmask column, click a name.
- 3. Make changes, as needed.
- 4. Click Save.

Delete DHCP Server

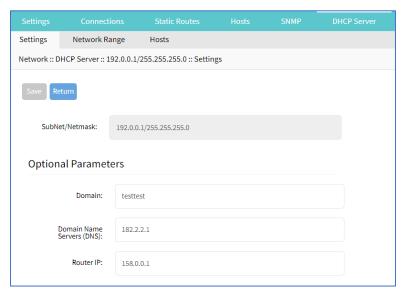

- 1. Go to Network :: DHCP Server.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

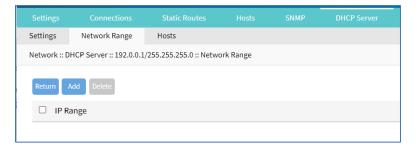

Edit DHCP Server Settings, IP Range, and Hosts

WebUI Procedure

- 1. Go to Network :: DHCP Server.
- 2. In the Subnet/Netmask column, click name (displays dialog).

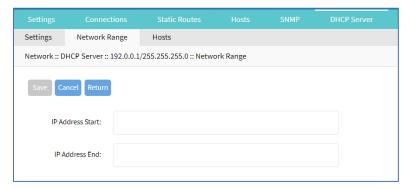

- 3. On Settings sub-tab, review details. Make changes, as needed.
- 4. Click on **Network Range** sub-tab (displays dialog).

To add IP Range:

Click Add (displays dialog).

Enter IP Address Start (first IP address to be served).

Enter IP Address End (last IP address to be served).

Click Save.

To edit IP Range

In column, click on IP Range name.

Make changes, as needed.

Click Save.

To delete IP Range

Select checkbox next to name.

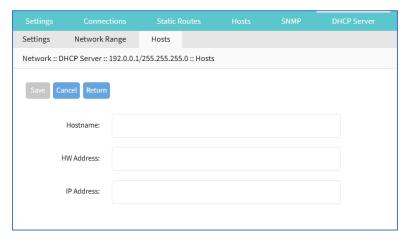

Click **Delete**.

Click on Hosts sub-tab (displays dialog)

To add a host:

Click Add (opens dialog)

Enter Hostname

Enter HW Address. (MAC address to which an IP address reservation applies).

Enter IP Address (IP address assigned to specific host matching the MAC address).

Click Save.

To edit host:

In Host column, click on name.

Make changes, as needed.

Click Save.

To delete host:

In Host column, select checkbox.

Click **Delete**.

SSL VPN tab

Multiple VPN options are supported. This includes VPN client and server options plus IPsec configurations for host to host, site to site, and others. Also available is IPsec with asymmetric PSL auth support for IKEv2 tunnel. . This allows the System to act as VPN servers or clients.

Nodegrid supports a wide variety of SSL configuration options. The System can act as either SSL client or SSL server, as needed by the customer configuration and security requirements.

Client sub-tab

The VPN client configuration settings are generally used for failover scenarios. This is when a main secure connection fails over to a less secure connection type. The VPN tunnel is used to secure traffic. When the Nodegrid device is configured as an VPN client, it is bound to a network interface (optional) and the VPN tunnel is automatically established when the bounded interface starts. Multiple client configurations can be added that support different connection and interface details.

NOTE: Depending on the configuration, multiple files are required and must be available in the /etc/openvpn/CA folder.

VPN Client Table

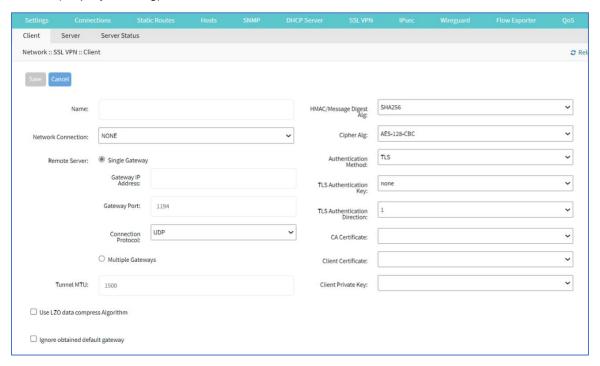

Column name	Description
Name	Connection name.
Connection	Network interface the tunnel is bound.
Status	Status of client.
VPN Gateway	VPN Gateway IP address.
IPv4 Tunnel Net	IPv4 Tunnel IP address.
IPv6 Tunnel Net	IPv6 Tunnel IP address.

Add Client

WebUI Procedure

- 1. Go to Network :: SSL VPN :: Client.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On Network Connection drop-down, select one (None, ETH0, ETH1, hotspot).
- 5. In Remote Server menu, select:

Single Gateway radio button

Enter Gateway IP Address.

Enter Gateway Port (default: 1194).

On Connection Protocol drop-down, select one (UDP, TCP).

Multiple Gateway radio button

Enter Gateways (comma separated).

6. Enter **Tunnel MTU** (MTU size for the tunnel interface. Default: 1500).

- 7. Select **Use LZO data compress Algorithm** checkbox.
- 8. Select **Ignore obtained default gateway** checkbox.
- 9. On HMAC/Message Digest Alg drop-down, select one.
- 10. On **Cipher Alg** drop-down, select one.
- 11. On **Authentication Method** drop-down, select one.

TLS

TLS Authentication Key drop-down, select one.

TLS Authentication Direction drop-down, select one.

CA Certificate drop-down, select one.

Client Certificate drop-down, select one.

Client Private Key drop-down, select one.

Static Key

Secret drop-down, select one.

Enter Local Endpoint (Local IP).

Enter Remote Endpoint (Remote IP).

Password

Enter Username.

Enter Password.

On CA Certificate drop-down, select one.

Password plus TLS

Enter Username.

Enter Password.

TLS Authentication Key drop-down, select one.

TLS Authentication Direction drop-down, select one.

CA Certificate drop-down, select one.

Client Certificate drop-down, select one.

Client Private Key drop-down, select one.

12. Click Save.

Edit Client

WebUI Procedure

1. Go to Network :: SSL VPN :: Client.

- 2. On Subnet/Netmask column, click a name.
- 3. Make changes, as needed.
- 4. Click Save.

Delete Client

WebUI Procedure

- 1. Go to Network :: SSL VPN :: Client.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

Start Client VPN

WebUI Procedure

- 1. Go to Network :: SSL VPN :: Client.
- 2. Select checkbox next to client to be started.
- 3. Click Start VPN.

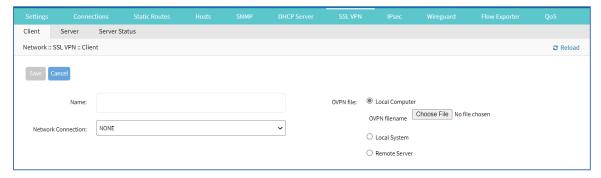

Stop Client VPN

WebUI Procedure

- 1. Go to Network :: SSL VPN :: Client.
- 2. Select checkbox next to client to be stopped.
- Click Stop VPN.

Import OVPN

- 1. Go to Network :: SSL VPN :: Client.
- 2. Click Import OVPN (displays dialog).

- 3. Enter Name.
- 4. On Network Connection drop-down, select one (NONE, ETH0, ETH1, hotspot).

5. In OVPN File menu:

Select **Local Computer** radio button:

Click Choose File. Locate and select the file.

Select Local System radio button:

On OVPN filename drop-down, select one.

Select Remote Server radio button:

Enter URL.

Enter Username.

Enter Password.

(as needed) Select The path in url to be used as absolute path name checkbox.

6. Click Save.

Server sub-tab

Nodegrid can be configured as a VPN server. By default, this is disabled. Depending on the configuration, multiple files are required and must be available in the /etc/openvpn/CA folder.

Edit VPN Server Details

- 1. Go to Network :: SSL VPN :: Server.
- 2. Make modifications, as needed (see VPN Server Options table for settings).
- 3. Click Save.

VPN Server Options

Setting	Description
Status drop-down	After configuration as a VPN server, this field must be enabled to start the server (default: disabled).
Listen IP address	If defined, the server only responds to client requests coming in this interface.
Listen Port number	Listening port for incoming connections (default: 1194).
Protocol drop-down	Select Protocol (UDP, TCP, UDP IPv6, TCP IPv6).
Tunnel MTU	MTU for the tunnel (default: 1500).
Number of Concurrent Tunnels	Concurrent SSL client sessions (default: 256).
Authentication Method menu (displayed field adjust according to selection)	Enter field details: TLS (CA Certificate drop-down, Server Certificate drop-down, Server Key drop-down, Diffie Hellman drop-down) Static Key (Secret drop-down, Diffie Hellman drop-down) Password (CA Certificate drop-down, Server Certificate drop-down, Server Key drop-down, Diffie Hellman drop-down) Password plus TLS (CA Certificate drop-down, Server Certificate drop-down, Server Key drop-down, Diffie Hellman drop-down)
IP Address menu (display changes based on selection)	IP address settings for the tunnel: Network radio button IPv4 Tunnel (NetAddr/ Netmask): IPv6 Tunnel (NetAddr/ Netmask): Point to Point radio button Local Endpoint (Local IP): Remote Endpoint (Remote IP): Point To Point IPv6 radio button. Local Endpoint (Local IPv6) Remote Endpoint (Remote IPv6)
HMAC/Message Digest drop-down	Select HMAC connection algorithm from the list:
Cipher drop-down	Select connection cipher algorithm from the list.
Min TLS version drop-down	Connection TLS minimum (None, TLS 1.0, TLS 1.1, TLS 1.2, TLS 1.3.
Use LZO data compress Algorithm checkbox	Enable, Disable (If enabled, all tunnel traffic is compressed.)
Redirect Gateway (Force all client generated traffic through the tunnel) checkbox	Enable, Disable (If enabled, all traffic from a client is forced through the tunnel.)

Server Status sub-tab

When the device is configured and started as a VPN server, this page provides an overview of the general server status and connected clients.

Server Status Table

Column name	Description	
Common Name	Connection name.	
Real Address	Real IP address.	
Virtual Address	Virtual IP address.	
Bytes Received	Bytes received by client.	
Bytes Sent	Bytes sent from client.	
Connect Since	Continuous connection from <date time="">.</date>	

IPsec tab

The Nodegrid solution supports the IPsec tunnel configuration with a variety of options for host-to-host, host-to-site, site-to-site and road warrior settings. The Nodegrid node is directly exposed to the Internet. It is strongly recommended the device be secured. Built-in features include:

- Firewall configuration
- Enable Fail-2-Ban
- Change all default passwords with strong passwords
- Disable services not required

Overview

Authentication Methods

Multiple authentication methods are available. Some are simple (Pre-Shared keys and RSA keys) but with limited flexibility. Others require more initial configuration and setup which offers flexibility and consistency.

Pre-shared Keys

Pre-shared Keys provide the simplest and least secure method to secure an IPsec connection. This is a combination of characters that represent a secret. Both nodes must share the same secret. Nodegrid supports pre-shared keys with a minimum length of 32 characters. The maximum length is much higher. Due to compatibility reasons with other vendors, Nodegrid uses a 64-bit length for the examples. The longer the pre-shared key is, the more secure it is.

RSA Keys

RSA Keys or Raw RSA keys are commonly used for static configurations between single or a few hosts. The nodes are manually configured with each other's RSA keys.

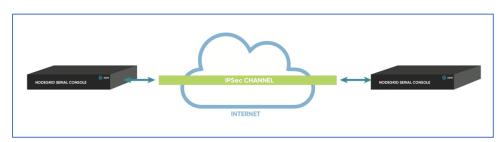

X.509 Certificates

Typically, X.509 Certificate authentications are used for larger deployments with a few to many nodes. The RSA keys of the individual nodes are signed by a central Certificate Authority (CA). The Certificate Authority maintains the trust relationship between the nodes. As needed, specific nodes can include revocation of trust. Nodegrid supports both public and private CA's. As needed, the Nodegrid Platform can host and manage its own Certificate Authority for IPsec communication.

Connection Scenarios

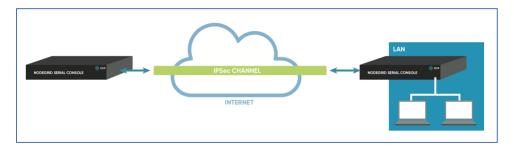

IPsec supports many connection scenarios, from the basic one-to-one nodes and the more complex one-to-many nodes. Communication can be limited to the directly involved nodes. If needed, communication can be expanded to the networks access table behind the nodes. Examples are provided for some of the most common scenarios.

Host-to-Host

Host-to-Host communication is two nodes directly connected with a VPN tunnel. The communication is limited to direct communication between them. None of the packages are routed or forwarded. This is a point-to-point communication tunnel between two nodes.

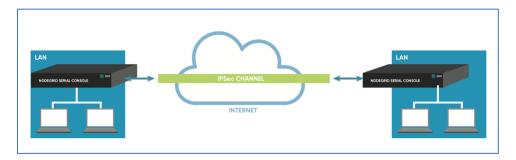

Host-to-Site

With host-to-Site, one node establishes a VPN tunnel to a second node. Communication is limited on one site to the specific node; and on the other side, limited to all devices in a range of subnet accessible by the second node.

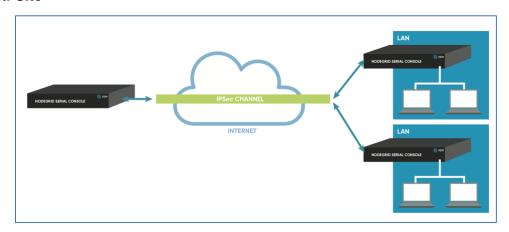

Site-to-Site

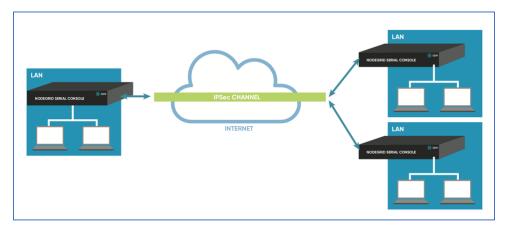

In site-to-site, the tunnel is established between two nodes. Communication can specify the subnet on both sides. This allows communication between devices on either side of the connection.

Host-to-Multi-Site

Host-to-multi-site communication is created with individual VPN connections. This is done between hosts or with specific multi-site configurations (which greatly improves scalability). Multiple nodes can connect to the same node. A typical use would be remote offices with a VPN connection to the main office. This would limit communications to the one node and devices on specified subnets in the remote locations.

Site-to-Multi-Site

Site-to-multi-site is most common for enterprise VPN setups. Similar to host-to-multi-site, communication is allowed to the specific subnet on either side. The West node would have access

to all specified subnet on any of the sites. The remote sites only can access the subnet exposed by the West node.

Keys and Certificates

Keys and Certificates

	Host to Host	Host to Site	Site to Site	Host to Multi- Site	Site to Multi-Host
Pre-shared Keys	Possible	Possible	Possible	Possible	Possible
RSA Key	Recommended	Recommended	Recommended	Possible	Possible
X.509 Certificates	Recommended	Recommended	Recommended	Recommended	Recommended

IPsec Configuration Process

These are the general configuration steps to configure the desired connection.

- 1. To prepare the Nodegrid, see How to Prepare a Nodegrid Node for IPsec
- 2. Ensure that one of the authentication methods is prepared:

How to create Pre-shared Keys for IPsec

How to create RSA Keys for IPsec

How to Create Certificates for IPsec

NOTE: For Production environments, it is recommended to use RSA Keys or Certificate Authentication. For a test environment, Pre-Shared Keys are easy to set up.

3. Create an IPsec configuration file. Configuration examples can be found here:

Pre-Shared Keys

How to Configure IPsec Host to Host Tunnel with Pre-Shared Key

How to configure IPsec Host to Site tunnel with Pre-Shared Key

How to Configure IPsec Site to Site Tunnel with Pre-Shared Key

RSA Keys

How to Configure IPsec Host to Host Tunnel with RSA Keys

How to Configure IPsec Host to Site tunnel with RSA Keys

How to Configure IPsec Site to Site Tunnel with RSA Keys

Certificates

How to Configure IPsec Host to Host Tunnel with Certificate

How to Configure IPsec Host to Site Tunnel with Certificate

How to Configure IPsec Site to Site Tunnel with Certificate

- 4. As required, distribute and exchange configuration files and keys to all nodes
- 5. Test the connection.

For more detailed guides on how to use IPsec with the Nodegrid Platform, visit the Knowledge Base.

Tunnel sub-tab

The main table displays available tunnels.

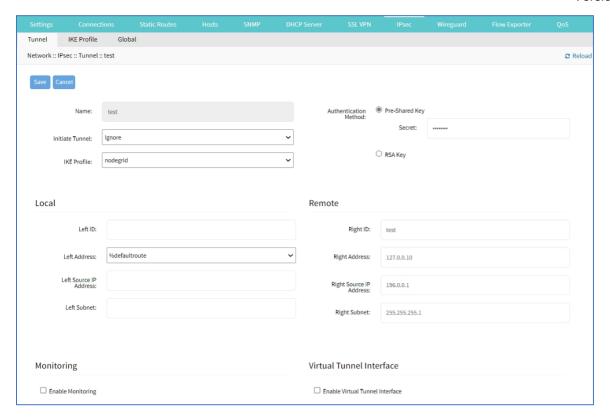

Tunnel Main Table

Column name	Description	
Name	Tunnel name.	
Authentication Method	Method of authentication.	
Left ID	Tunnel left ID.	
Right ID	Tunnel right ID.	
IKE Profile	Profile information.	
Status	Current tunnel status.	

Add a New Tunnel

- 1. Go to Network :: IPsec :: Tunnel.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. On Initiate Tunnel drop-down, select one (Start, Ignore, On-Demand),
- 5. On IKE Profile drop-down, select one (Cisco_ASA, PaloAlto, nodegrid).
- 6. In Authentication Method menu, select one:

Select Pre-Shared Key radio button.

Enter Secret.

Select RSA Key radio button (displays dialog)

Enter Left Public Key.

Enter Right Public Key.

Click Generate Left Public Key.

7. In Local menu:

Enter Left ID.

On Left Address drop-down, select one (%defaultroute, %any, %eth0, %eth2, %eth1, %loopback, %looback0, %sit0, %lo, IP Address).

Enter Left Source IP Address.

Enter Left Subnet.

8. In *Remote* menu:

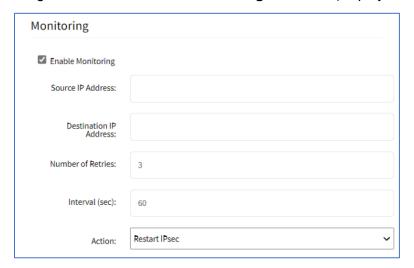

Enter Right ID.

Enter Right Address.

Enter Right Source IP Address.

Enter Right Subnet.

9. (optional) In *Monitoring* menu, select **Enable Monitoring** checkbox (displays dialog).

Enter Source IP Address (to ping from). Enter

Enter **Destination IP Address** (to ping to).

Enter **Number of Retries** (pings before triggering Action)

Enter Interval (seconds) (time between retries)

On **Action** drop-down, select one (if tunnel does not respond):

Restart IPsec (to resolve issues with key negotiation)

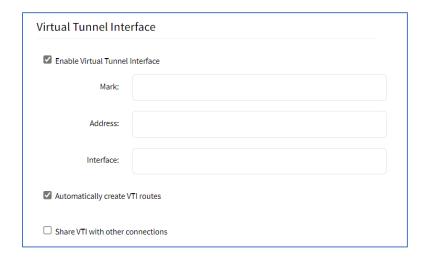

Restart Tunnel (to resolve issues with key negotiation)

Failover (fails over to another IPsec tunnel)

NOTE: The number of retires and interval should be greater than that of the dead peer detection configuration within the IKE profile.

10. (optional) In *Virtual Tunnel Interface* menu, select **Enable Virtual Tunnel Interface** checkbox (displays dialog).

Enter Mask.

Enter Address.

Enter Interface.

Select Automatically create VTI routes.

Select Share VTI with other connections.

11. Click Save.

Edit a Tunnel

WebUI Procedure

- 1. Go to Network :: IPsec :: Tunnel.
- 2. In the Name column, click a name (opens dialog)...
- 3. Make changes, as needed.
- 4. Click Save.

Delete a Tunnel

WebUI Procedure

- 1. Go to Network :: IPsec :: Tunnel.
- 2. In the table, select checkbox of tunnel to delete.
- 3. Click Delete.

Start a Tunnel

- 1. Go to Network :: IPsec :: Tunnel.
- 2. In the table, select checkbox of tunnel to start.
- 3. Click Start Tunnel.

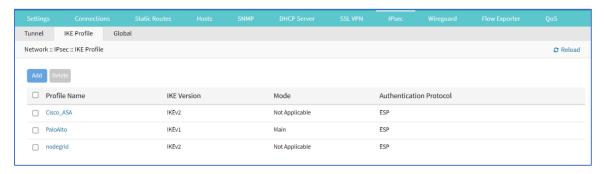

Stop a Tunnel

WebUI Procedure

- 1. Go to Network :: IPsec :: Tunnel.
- 2. In the table, select checkbox of tunnel to stop.
- 3. Click Stop Tunnel.

IKE Profile sub-tab

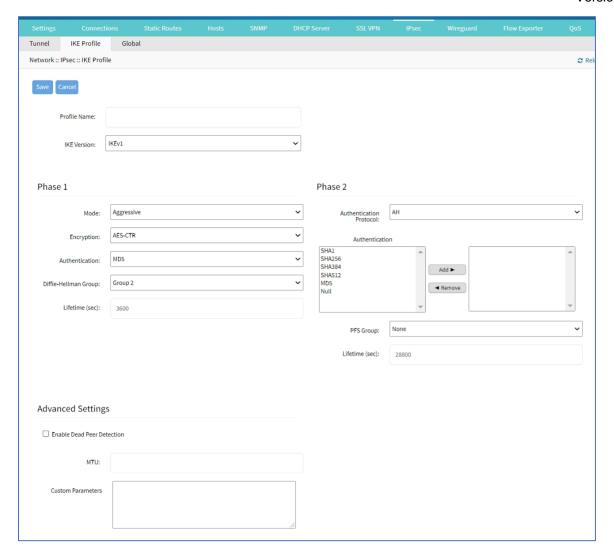

IKE Profiles are managed on this page.

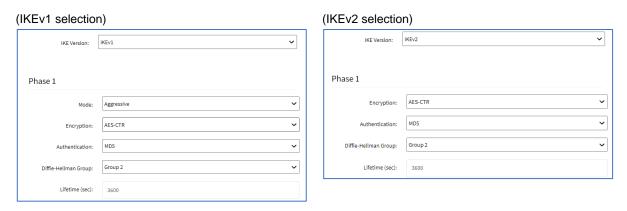

Add a New Profile

- 1. Go to Network :: IPsec :: IKE Profile.
- 2. Click Add (displays dialog).

- 3. Enter Profile Name.
- 4. On IKE Version drop-down, select one (IKEv1, IKEv2) (modifies Phase 1 selection).

(if IKEv1) On Mode drop-down, select one (Aggressive, Main).

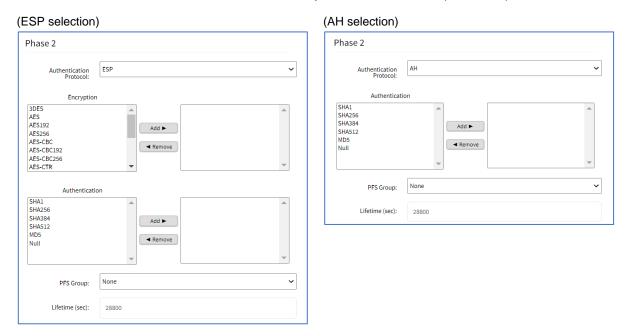

On Encryption drop-down, select one (3DES, AES, AES193, AES256, AES-CBC, AES-CBC192, AES-CBC256, AES-CTR, AES-CTR192, AES-CTR256, AES-GCM, AES-GCM192, AES-GCM256)

On Authentication drop-down, select one (SHA1, SHA256, SHA384, SHA512, MD5).

On Diffie-Hellman Group drop-down, select one (Group 2, 5, 14, 15, 16, 17, 18, 19, 20, 21, 31) Enter Lifetime (sec) value.

5. In *Phase 2* menu, **Authentication Protocol** drop-down, select one (**ESP**, **AH**).

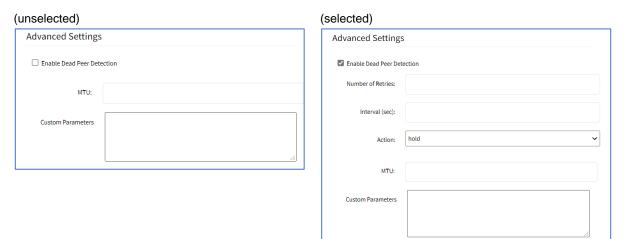

(ESP selection only) On *Encryption*, select from left-side panel, click **Add**▶ to move to right-side panel.

To remove from right-side panel, select, and click **∢Remove**.

On Authentication, select from left-side panel, click Add be to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

In Advanced Settings menu, dialog changes if Enable Dead Peer Detection checkbox is selected.

(if selected) Enter value on **Enter number of retries**.

Enter Interval (sec).

On Action drop-down, select one (hold, clear, restart).

Enter MTU.

Enter Custom Parameters (comma separated).

7. Click Save.

Edit a Profile

WebUI Procedure

- 1. Go to Network :: IPsec :: IKE Profile.
- 2. Locate and click on the Profile Name.
- 3. Modify configuration details, as needed.
- 4. Click Save.

Delete a Profile

WebUI Procedure

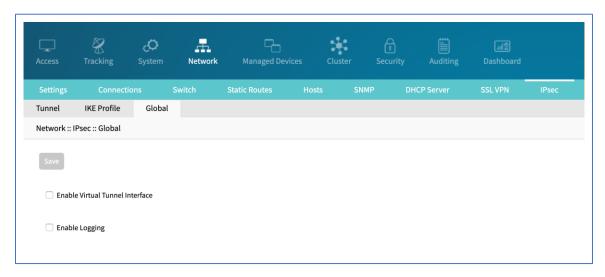

- 1. Go to Network :: IPsec :: IKE Profile.
- 2. Click the checkbox next to the profile to delete.
- 3. Click Delete.

Global sub-tab

Edit Global Options

WebUI Procedure

1. Go to Network :: IPsec :: Global.

Select/unselect Enable Virtual Tunnel Interface checkbox.

- 3. Select/unselect **Enable Logging** checkbox.
- 4. Click Save.

Wireguard tab

Wireguard establishes a site to site tunnel. Wireguard is supported in the admin CLI and GUI on Nodegrid devices v5.2+.

Advantages

- Uses a current elliptic curve algorithm for the encryption
- Uses RSA keys and optional PSK's for authentication
- Roaming of End Points is en integrated part of the solution
- Good Client support, with native support for Windows, MacOS, Linux, iOS and Android
- Native support for tunnel interfaces to allow for Multicast traffic
- Support for IPv6 and IPv4 over the same interface
- Part of the Linux kernel ensures long term support

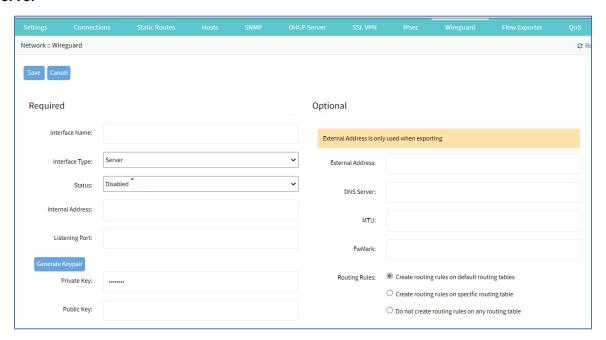

Manage Wireguard Configurations

Add a Wireguard Configuration

- 1. Go to Network :: Wireguard.
- 2. Click **Add** (dialog changes, based on **Interface Type** drop-down selection).
- 3. Enter Interface Name.
- 4. On **Interface Type** drop-down, select one (display is modified, based on selection).

Server

On Status drop-down, select one (Enabled, Disabled).

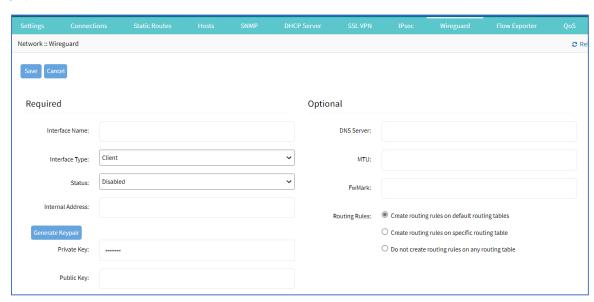

Enter Internal Address.

Enter Listening Port.

Click Generate Keypair.

In Optional menu, enter External Address.

Client

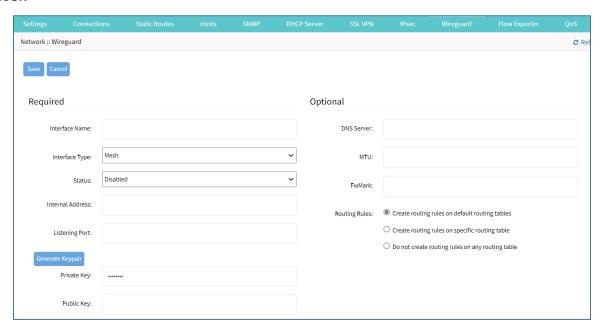

On Status drop-down, select one (Enabled, Disabled).

Enter Internal Address.

Click Generate Keypair.

Mesh

On Status drop-down, select one (Enabled, Disabled).

Enter Internal Address.

Enter Listening Port.

Click Generate Keypair.

5. In Optional menu:

Enter DNS Server.

Enter MTU.

Enter FwMark.

6. In Routing Rules menu, select one.

Create routing rules on default routing tables radio button.

Create routing rules on specific routing table radio button.

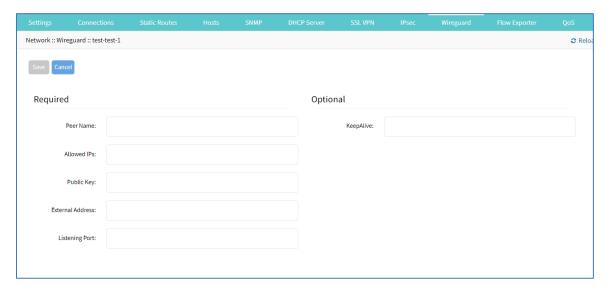

Do not create routing rules on any routing table radio button.

7. Click Save.

Next is to configure the Peer.

8. On the table, click the **Name** of the new configuration (displays dialog).

9. In the Required menu:

Enter Peer Name.

Enter Allowed IPs (comma-separated).

Enter Public Key.

Enter External Address.

Enter Listening Port.

- 10. In the Optional menu, enter Keepalive value.
- 11. Click Save.

CLI Procedure

1. Add the Wireguard configuration details, apply these commands:

```
[admin@nodegrid /]# cd /settings/wireguard/
[admin@nodegrid {wireguard}]# set <to configure these parameters>
    dns_server=<value>
    interface_name=<value>
    listening_port=<value>
    public_key=<value>
    external_address=<value>
    interface_type=<value>
    mtu=<value>
    routing_rules=<value>
    fwmark=<value>
    internal_address=<value>
    private_key=<value>
    internal_address=<value>
    private_key=<value>
    status=<value>
    [admin@nodegrid {wireguard}]# commit
```

2. Configure peers:

```
[admin@nodegrid wireguard]# cd Interface_Name/
[admin@nodegrid Server_Interface]# cd peers/
[admin@nodegrid peers]# add
[admin@nodegrid {peers}]# set <to configure these parameters>
    allowed_ips=<value>
    keepalive=<value>
    peer_name=<value>
    external_address=<value>
    listening_port=<value>
    public_key=<value>
[admin@nodegrid {peers}]# commit
```

Delete a Wireguard Configuration

WebUI Procedure

- 1. Go to Network :: Wireguard.
- 2. On the table, select checkbox of configuration to delete.
- 3. Click Delete.

Edit a Wireguard Configuration

WebUI Procedure

- 1. Go to Network :: Wireguard.
- 2. On the table, select checkbox of configuration to edit.
- 3. Click Edit (displays dialog).
- 4. Make changes as needed.
- 5. Click Save.

Export as Peer

WebUI Procedure

- 1. Go to Network :: Wireguard.
- 2. On the table, select checkbox of configuration to export.
- 3. Click Export as Peer.

Start Tunnel\

- 1. Go to Network :: Wireguard.
- 2. On the table, select checkbox to start configuration.

3. Click Start Tunnel.

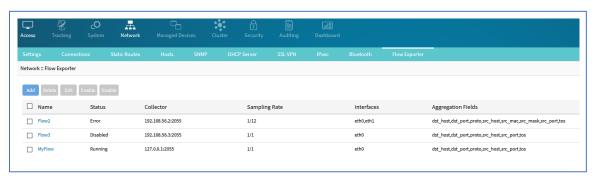

Stop Tunnel

WebUI Procedure

- 1. Go to Network :: Wireguard.
- 2. On the table, select checkbox to stop configuration.
- 3. Click Stop Tunnel.

Flow Exporter tab

Netflow streaming telemetry data is supported for all network interfaces including the switch interface.

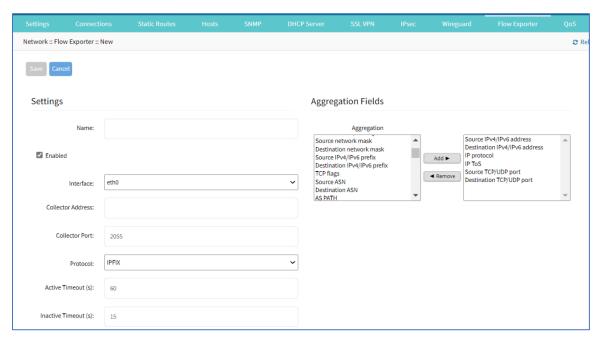

Flow Exporter Main Table

Column names	Description	
Name	Name of the flow.	
Status	Status of the flow (Running, Disabled, Error).	
Collector	IP address and port.	
Sampling rate	Sampling ratio.	
Interfaces	Interfaces used.	
Aggregation Fields	Aggregation fields that have been added.	

Add a new Flow Export

- 1. Go to Network :: Flow Exporter.
- 2. Click Add (displays dialog).

3. In Settings menu:

Enter Name.

Select **Enabled** checkbox.

On Interface drop-down, select one (eth0, eth1).

Enter Collector Address.

Ener Collector Port.

On Protocol drop-down, select one (IPFIX, NetFlow v9, NetFlow v5).

Enter Active Timeouts (s) in seconds.

Enter Inactive Timeout (s) in seconds.

Enter Sampling Rate (1 out of N).

4. In Aggregation Fields menu:

To add an item to the Aggregation:

Select item on left-side panel.

Click **Add**▶ (item is moved).

To remove an item from the Aggregation:

Select item on right-side panel.

Click **∢Remove** (item is moved).

5. Click Save.

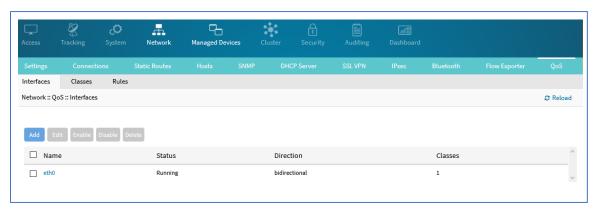

QoS tab

QoS (Quality of Service) rules can be configured. Three configuration levels are available: Interface, Classes, Rules.

Interfaces sub-tab

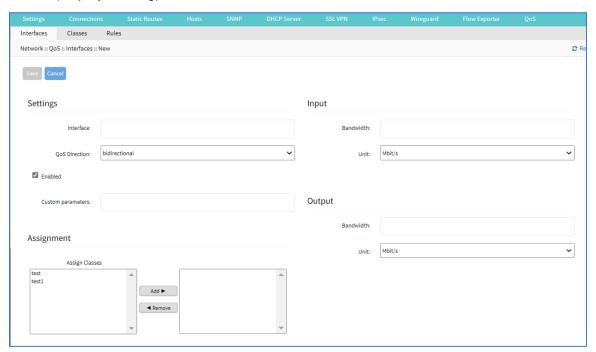

The Interface tab allows you to Add, Edit, Delete, and Enable/Disable QoS on each available interface. The main table displays information regarding the Name, Status, Direction, and Classes for each interface.

NOTE: Status can be Disabled, Running, or Error

Add a Interface

- 1. Go to Network :: QoS :: Interfaces.
- 2. Click Add (displays dialog).

- 3. In Settings menu:
- 4. Enter Interface (must match existing interface name).

On QoS Direction drop-down, select one (Input, Output, Bidirectional).

Select **Enabled** checkbox.

Enter **Custom parameters** (advanced users only – enter FireQOS commands).

5. In Assignment menu:

To add a Class:

Select item on left-side panel.

Click **Add**▶ (item is moved).

To remove a Class:

Select item on right-side panel.

Click **∢Remove** (item is moved).

6. In Input menu: (Input menu details must match Output menu details)

Enter Bandwidth.

On Unit drop-down, select one (GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

7. In Output menu:

Enter Bandwidth.

On Unit drop-down, select one (GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

8. Click Save.

Edit an Interface

WebUI Procedure

- 1. Go to Network :: QoS :: Interfaces.
- 2. In the Name column, locate and select checkbox,
- Click Edit (opens dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete an Interface

- 1. Go to Network :: QoS :: Interfaces.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

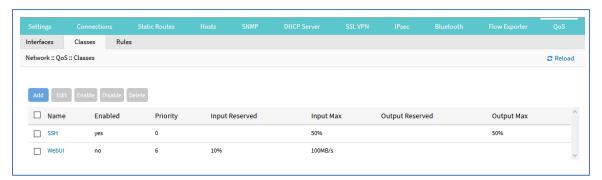

Enable/Disable an Interface

WebUI Procedure

- 1. Go to Network :: QoS :: Interfaces.
- 2. Select checkbox to be enabled/disabled.
- 3. Click Enable (to enable interface).
- 4. Click **Disable** (to disable interface).

Classes sub-tab

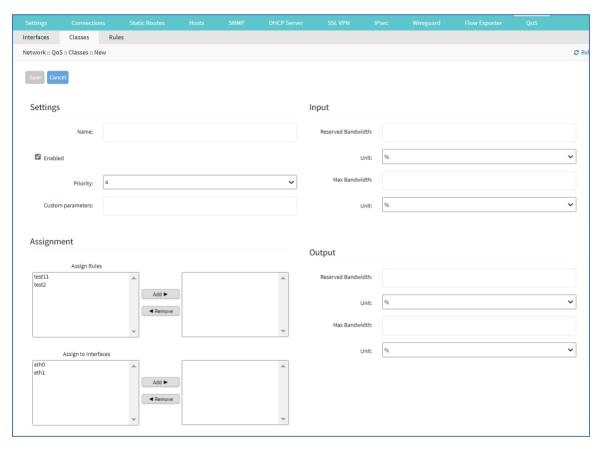

Classed management includes: Add, Edit, Delete, and Enable/Disable QoS classes. The main table displays information regarding Name, Enabled (yes/no), Priority, Input Reserved, Input Max, Output Reserved, and Output Max.

Add a Class

- 1. Go to Network :: QoS :: Classes.
- 2. Click Add (displays dialog).

3. In Settings menu:

Enter **Name** (descriptive name for this class).

Select Enabled checkbox.

On **Priority** drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7) (0 is highest priority).

4. In Assignment menu:

To add a Rule:

NOTE: If multiple rules are added, they are applied as OR (for example, if two rules are added, whichever rule applies is the rule used for the class.

Select item on left-side panel.

Click Add▶ (item is moved).

To remove a Rule:

Select item on right-side panel.

Click **∢Remove** (item is moved).

To add an Interface:

Select item on left-side panel.

Click Add ► (item is moved).

To remove an Interface:

Select item on right-side panel.

Click **∢Remove** (item is moved).

5. In *Input* menu: (Input menu details must match Output menu details)

Enter Reserved Bandwidth.

On Unit drop-down, select one (%, GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

Enter Max Bandwidth.

On Unit drop-down, select one (%, GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

6. In Output menu:

Enter Reserved Bandwidth.

On Unit drop-down, select one (%, GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

Enter Max Bandwidth.

On Unit drop-down, select one (%, GB/s, MB/s, KB/s, B/s, Gbit/s, Mbit/s, Kbit/s, bit/s).

7. Click Save.

NOTE: The "Input" and "Output" sections only apply to interfaces with that corresponding direction. For example, if a class has "Input" and "Output" limits but is assigned to an interface with "output", only "Output" limits apply.

Edit a Class

WebUI Procedure

- 1. Go to Network :: QoS :: Classes.
- 2. In the Name column, locate and select checkbox,
- 3. Click Edit (opens dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete a Class

WebUI Procedure

- 1. Go to Network :: QoS :: Classes.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

Enable/Disable a Class

WebUI Procedure

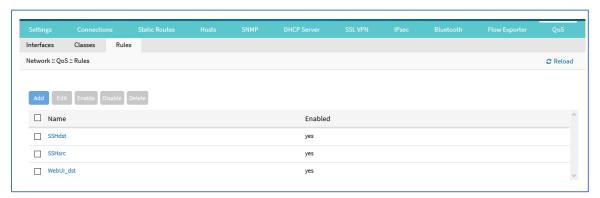

1. Go to Network :: QoS :: Classes.

- 2. Select checkbox to be enabled/disabled.
- 3. Click Enable (to enable class).
- 4. Click **Disable** (to disable class).

Rules sub-tab

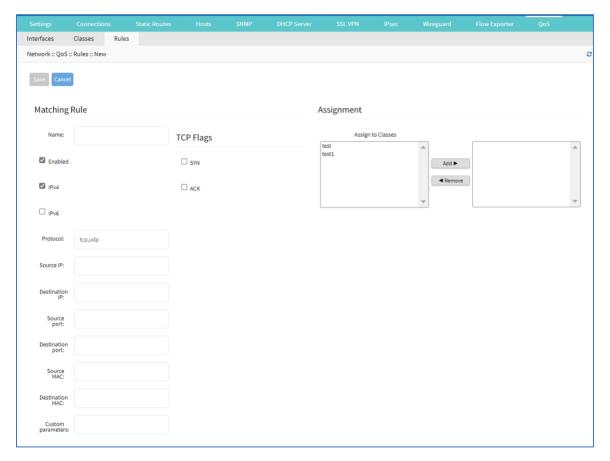

Customer QoS rules are managed with these actions: Add, Edit, Enable/Disable, and Delete. The main table contains information on existing rules.

Add a Rule

- 1. Go to Network :: QoS :: Rules.
- 2. Click Add (displays dialog).

3. In Matching Rule menu:

Enter Name (descriptive name for this rule).

Select Enabled checkbox.

Select IPv4 checkbox.

Select IPv6 checkbox.

Enter Protocol.

NOTE: Options for "Protocol" include the majority of protocol types. Entry can be by protocol number or lower-case protocol keyword. Multiple protocols can be input using commaseparated entries. Official source is at Internet Assigned Numbers Authority.

Enter Source IP.

Enter Destination IP.

Enter Source Port.

Enter **Destination Port**.

Enter Source MAC.

Enter **Destination MAC**.

Enter Custom parameters (advanced users only – enter FireQOS commands).

4. In TCP Flags menu:

Select SYN checkbox.

Select ACK checkbox.

5. In Assignment menu:

To add a Class:

Select item on left-side panel.

Click Add▶ (item is moved).

To remove a Class:

Select item on right-side panel.

Click **∢Remove** (item is moved).

6. Click Save.

NOTE: All parameters in a rule will be applied as an "AND" operation.

For fields that support multiple values, enter comma separated values. Numeric fields support ranges, separated with a dash (i.e., 22-100).

Edit a Rule

WebUI Procedure

- 1. Go to Network :: QoS :: Rules.
- 2. In the *Name* column, locate and select checkbox,
- Click Edit (opens dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete a Rule

WebUI Procedure

- 1. Go to Network :: QoS :: Rules.
- 2. Select checkbox to be deleted.
- 3. Click Delete.

Enable/Disable a Rule

- 1. Go to Network :: QoS :: Rules.
- 2. Select checkbox to be enabled/disabled.
- 3. Click **Enable** (to enable rule).

4. Click **Disable** (to disable rule).

Managed Devices Section

In this section, users can configure, create, and delete target devices. The Nodegrid Platform supports target devices connected through a serial, USB, or network connection.

General Information

Supported Protocols

These protocols are currently supported for network-based devices:

- Telnet
- SSH
- HTTP/S
- IPMI variations
- SNMP

Devices are managed with multiple options (enable, create, add). These can be done manually or automatically with Discovery.

When a managed device is added in the System, one license is pulled from the License Pool. Each unit is shipped with enough perpetual licenses for all physical ports. Additional licenses can be added to a unit to manage additional devices.

If licenses expire or are deleted from the system, the status of any device that exceeds the total licenses is changed to "Unlicensed". The System maintains information on unlicensed devices but are only shown on the *Access* page. Licensed devices are listed and available for access and management. On the *Managed Devices* page (upper right), total licenses, total in-use licenses, and total available licenses are shown.

Device Types

These managed device types are supported:

Console connections that utilize RS-232 protocol.

Nodegrid Console Servers

Nodegrid Net Services Routers

Service Processor Devices that use:

IPMI 1.5

IPMI 2.0

HP iLO

Oracle/SUN iLOM

IBM IMM

Dell DRAC

Dell iDRAC

- Console Server connections that utilize SSH protocol
- Console Server connections that utilize:

Vertiv ACS Classic family

Vertiv ACS6000 family

Lantronix Console Server family

Opengear Console Server family

Digi Console Server family

Nodegrid Console Server family

• KVM (Keyboard, Video, Mouse) Switches that utilize:

Vertiv DSR family

Vertiv MPU family

Atem Enterprise KVM family

Raritan KVM family

ZPE Systems KVM module

• Rack PDUs from:

APC

CPI

Cyberpower

Baytech

Eaton

Enconnex

Vertiv (PM3000 and MPH2)

Raritan

Ritttal

Servertech

- Cisco UCS
- Netapp

- Infrabox
- Virtual Machine sessions from:

VMWare

KVM

• Sensors:

ZPE Systems Temperature and Humidity Sensor

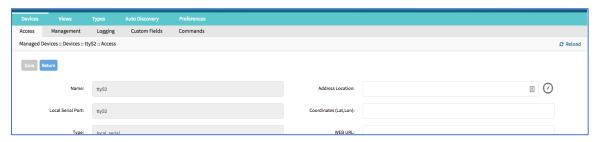

• EdgeCore Access Points

Devices tab

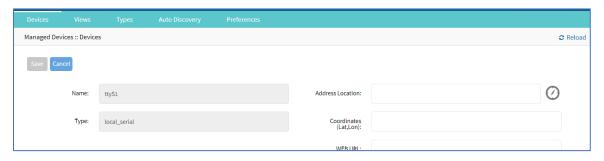

These are all actions that can be performed on this page.

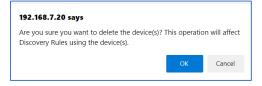

Add – add a device configuration.

Edit – edit settings on the selected device

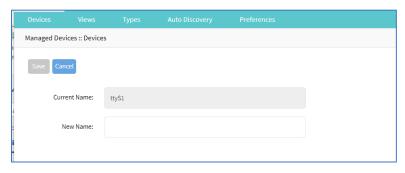

Delete – displays a pop-up delete confirmation dialog

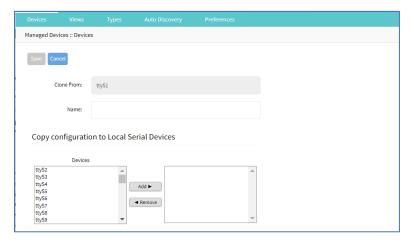

Rename - change name of selected device

Clone - clone the selection

Enable – changes device use from disabled to enabled

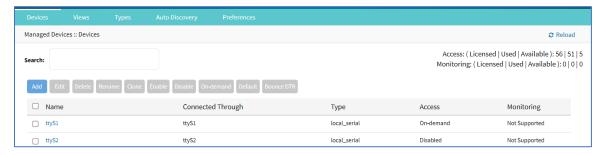

Disable – changes device use from enabled to disabled

On-demand – changes device use to On-Demand

Default - make this the default

Bounce DTR – puts the DTR and RTS pins DOWN – waits 500ms, then put those pins UP.

Device Types

When a device is added, the *Add* dialog is modified by the **Type** selection.

Service Processor Devices

The Nodegrid Platform supports multiple IPMI-based Service Processors (IPMI 1.5, IMPI 2.0, Hewlett Packard ILO's, Oracle/SUN iLOM's, IBM IMM's, Dell DRAC and iDRAC).

To manage these devices, Nodegrid requires a valid network connection to the target device. This can be without dedicated network interface on Nodegrid, or through an existing network connection.

These features are available:

- Serial Over LAN (SOL)
- Web Interface
- KVM sessions
- Virtual Media
- Data Logging
- Event Logging
- Power Control (through Rack PDU)

Some features might not be available, depending on the Service Processor capabilities.

For console access via SOL, on the server make sure to enable BIOS console redirect and OS console redirect (typically for Linux OS).

Infrabox

Smart Access Control is supported for Rack's solution appliances (Infrabox) from InfraSolution. Communication requires SNMP to be configured.

These features are available:

- Door Control
- Web Session

Power Control through Rack PDU

Netapp

Netapp appliances are supported through their management interfaces. These features are available:

- Console Session
- Data Logging
- Event Logging
- Power Control through Netapp appliance
- Web Session
- Custom Commands
- Power Control through Rack PDU

Cisco UCS

Management of Cisco UCS is supported through Console Ports, as well as management interfaces. These features are available:

- Console Session
- Data Logging
- Event Logging
- Power Control through Cisco UCS appliance
- Web Session
- Custom Commands

Devices with SSH

Management of devices through SSH is supported:

These features are available:

- Console Session
- Data Logging
- Custom Commands
- Web Sessions
- Power Control through Rack PDU

Third-Party Console Servers

Multiple third-party Console Servers from different vendors are supported (including consoles from Avocent and Servertech). These can be added to allow connected targets to be directly connected to a Nodegrid device.

This is a two-step process, First, the third party unit is added to the Nodegrid Platform. Then all enabled ports are added to the Nodegrid Platform.

These features are available:

- Console Session
- Data Logging
- Custom Commands
- Web Sessions
- Power Control through Rack PDU

Rack PDUs

Multiple third-party Rack PDUs from different vendors are supported. (including products from APC, Avocent, Baytech, CPI, Cyberpower, Eaton, Enconnex, Geist, Liebert, Raritan, Rittal, and Servertech). When these devices are added to the Nodegrid Platform, users can connect to the Rack PDU and control the power outlets (only if supported by the Rack PDU). Outlets can be associated to specific target devices, allowing direct control of specific power outlets for this device.

These features are available:

- Console Sessions
- Data Logging
- Custom Commands
- Web Sessions
- Power Control of outlets

The Power Control feature needs to be supported by the Rack PDU. Check the Rack PDU manual to determine if this feature is available on a specific model.

NOTE: By default, Nodegrid communicates with the Rack PDU with SSH/telnet. The reaction time is typically very slow. If possible, use SNMP to communicate with the Rack PDU.

KVM Switches

Multiple third party KVM switches are supported (including those from Avocent and Raritan). When added, the switches act as if directly connected.

This is a two-step process, First, the third-party KVM switch is added to the Nodegrid Platform. Then all enabled ports are added.

These features are available:

- KVM Session
- Web Sessions
- Power Control through Rack PDU

On the **Add** dialog, make sure these two settings are set:

For **End Point**, select **Appliance** radio button.

On **End Point**, select **KVM Port** radio button.

Device Procedures

Add Device

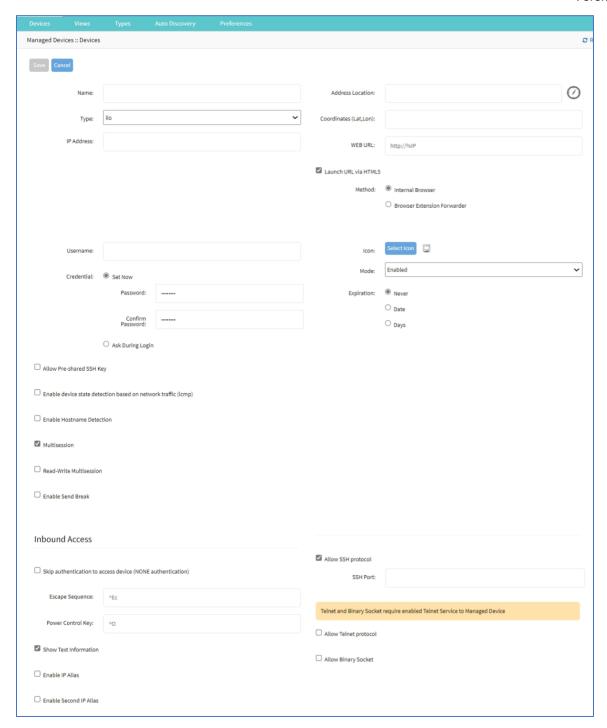

NOTE: Add dialog changes based on **Type** drop-down selection.

WebUI Procedure

1. Go to Managed Devices :: Devices,

2. Click Add (displays dialog).

- 3. Enter the Name (of the server).
- 4. In the **Type** drop-down, select one (see options, based on selection).

++++++++++++++

Service Processor devices (ilo, imm, drac, drac6, idrac7, ilom, ipmi_1.5, ipmi_2.0, intel_bmc). Enter **IP Address** (reachable by the Nodegrid Platform).

```
++++++++++++++
   Infrabox devices (infrabox)
   Enter IP Address (reachable by the Nodegrid Platform).
++++++++++++++
   Netapp devices (netapp)
   Enter IP Address (reachable by the Nodegrid Platform).
+++++++++++++
   Cisco UCS Blade devices (cimc_ucs)
   Enter IP Address (reachable by the Nodegrid Platform).
   Enter the Chassis ID.
   Enter the Blade ID.
++++++++++++++
   Virtual Console KVM devices (virtual_console_kvm)
   Enter IP Address (reachable by the Nodegrid Platform).
   Enter Port.
+++++++++++++
   Console Server devices (console_server_nodegrid, console_server_acs,
   console_server_acs6000, console_server_lantronix, console_server_opengear,
   console_server_digicp, console_server_raritan, console_server_perle)
   Enter IP Address (reachable by the Nodegrid Platform).
   Enter Port.
+++++++++++++
   PDU devices (pdu_apc, pdu_baytech,pdu_eaton, pdu_mph2, pdu_pm3000,
   pdu_cpi,pdu_raritan, pdu_geist, pdu_servertech, pdu_enconnex, pdu_cyberpower,pdu_rittal)
   Enter IP Address (reachable by the Nodegrid Platform).
+++++++++++++
   kVM Virtual Machine devices (virtual_console_kvm)
      Name must match the hypervisor name.
   Enter IP Address (reachable by the Nodegrid Platform).
++++++++++++++
   KVM devices (kvm_dsr, kvm_mpu, kvm_aten, kvm_raritan)
   Enter IP Address (reachable by the Nodegrid Platform).
```

++++++++++++++

5. Enter **Address Location** (a valid address for the device location).

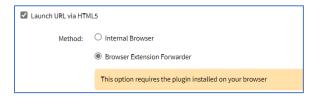

Enter **Coordinates (Lat, Lon)** (if GPS is available, click Compass icon – or manually enter GPS coordinates).

- 6. Enter Web URL.
- 7. Select Launch URL via HTML5 checkbox (expands options).

In *Method* menu, select one:

Internet Browser radio button

Browser Extension Forwarder radio button (apply note instructions).

8. Enter Username

In Credential menu, select one:

Set Now radio button

Enter Password and Confirm Password.

Ask During Login radio button (user credentials are entered during login).

9. Select checkboxes, as needed:

Allow Pre-shared SSH Key checkbox.

Enable device state detection based on network traffic (icmp) checkbox.

Enable Hostname Detection checkbox.

Multisession checkbox.

Read-Write Multisession checkbox.

Enable Send Break checkbox.

10. Click **Select Icon** .On the pop-up dialog, select an icon.

- 11. On Mode drop-down, select one (Enabled, On-demand, Disabled).
- 12. In *Expiration* menu, select one:

Never radio button

Date radio button

Enter Date (YYYY-MM-DD).

Days radio button

Enter Duration.

13. In End Point menu, select one (not available for service processors, virtual consoles);

Appliance radio button

Serial Port radio button

Enter Port Number.

KVM Port radio button

Enter Port Number.

14. In Inbound Access menu:

Select **Skip Authentication to access device (NONE authentication)** checkbox (if unselected, enter the following details).

Enter Escape Sequence.

Enter Power Control Key.

Select Show Text Information checkbox.

Select Enable IP Alias.

Enter IP Address.

On Interface drop-down, select one (eth0, eth1, loopback, loopback1).

On Browser Action drop-down, select one (console, web).

Select Allow Telnet Protocol.

Enter TCP Socket Port.

Select Allow Binary Socket.

Enter TCP Socket Port.

(optional) Select Enable Second IP Alias checkbox.

Enter IP Address.

On Interface drop-down, select one (eth0, eth1, loopback, loopback1).

On Browser Action drop-down, select one (console, web).

Select Allow Telnet Protocol.

Enter TCP Socket Port.

Select Allow Binary Socket.

Enter TCP Socket Port.

Select Allow SSH protocol.

Enter SSH Port.

At this location:

Select Allow Telnet Protocol.

Enter TCP Socket Port.

Select Allow Binary Socket.

Enter TCP Socket Port.

15. Click Save.

CLI Procedure

- 1. Go to /settings/devices.
- 2. Use the add command to create a new device.
- 3. Use the set command to define the following settings:

name type

ip_address

username and password (of service processer) or set credential ask_during_login

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=IPMI
[admin@nodegrid {devices}]# set type=ipmi_2.0
[admin@nodegrid {devices}]# set ip_address=192.168.10.11
[admin@nodegrid {devices}]# set credential=ask_during_login

or

[admin@nodegrid {devices}]# set credential=set_now
[admin@nodegrid {devices}]# set username=admin password=admin
[admin@nodegrid {devices}]# commit
```

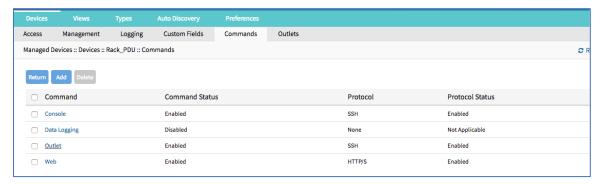

Configure Rack PDU

This requires two steps.

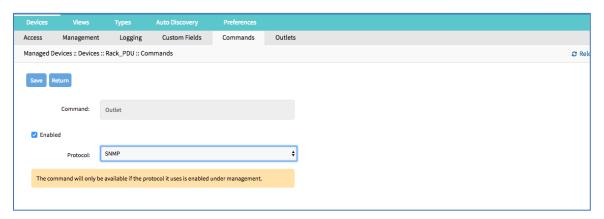

- 1. Add the PDU device. See Add Device.
- 2. Configure the PDU with the procedure below..

- 1. Go to Managed Devices:: Devices.
- 2. Locate and click the Name of the newly added Rack PDU.
- 3. On the **Commands** tab, *Command* column, click **Outlets**.

- 4. On the Protocol drop-down, select SNMP.
- 5. Click Save.

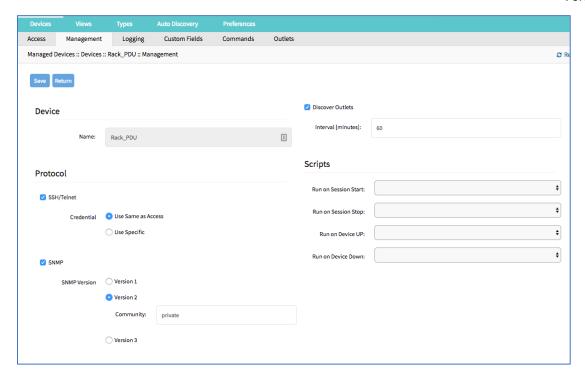

6. On the **Management** tab:

In the SNMP menu, update values to match the Rack PDU settings (see manufacturer's manual).

7. Click Save.

NOTE: Use SNMP settings to provide read and write access. Read-Only credentials can not control power outlets.

The Rack PDU Outlets are automatically discovered (may need a few minutes, depending on the Rack PDU).

CLI Procedure

- 1. Go to /settings/devices/<device name>/commands/outlet.
- 2. Change the protocol to SNMP.
- 3. Go to /settings/devices/<device name>/management.
- 4. Enable SNMP and select the desired SNMP version and details.
- 5. Save the changes with commit.

NOTE: Use SNMP settings to provide read and write access. Read-Only credentials can not control power outlets.

The Rack PDU Outlets are automatically discovered (may need a few minutes, depending on the Rack PDU).

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Rack_PDU
[admin@nodegrid {devices}]# set type=pdu_servertech
[admin@nodegrid {devices}]# set ip_address=192.168.2.39
[admin@nodegrid {devices}]# set credential=ask_during_login
or
[admin@nodegrid {devices}]# set credential=set_now
```

```
[admin@nodegrid {devices}]# set username=admin password=admin

[admin@nodegrid {devices}]# commit

[admin@nodegrid /]# cd /settings/devices/Rack_PDU/commands/outlet

[admin@nodegrid outlet]# set protocol=snmp

[admin@nodegrid outlet]# cd /settings/devices/Rack_PDU/management/

[admin@nodegrid management]# set snmp=yes

[+admin@nodegrid management]# snmp_version = v2

[+admin@nodegrid management]# snmp_commmunity = private

[+admin@nodegrid management]# commit
```

Edit Device

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the Name column, locate device and select checkbox.
- 3. Click **Edit** (displays dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete Device

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the *Name* column, locate device and select checkbox.
- 3. Click Delete.
- 4. On Confirmation dialog, click **OK**.

Rename Device

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the Name column, locate device and select checkbox.
- 3. Click Rename.
- Enter New Name.
- 5. Click Save.

Clone Device

WebUI Procedure

1. Go to Managed Devices :: Devices.

- 2. In the *Name* column, locate device and select checkbox.
- Click Clone.
- 4. Enter Name.
- 5. In Copy configuration to Local Serial Devices section:

Select from left-side panel, click Add ► to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

6. Click Save.

Enable/Disable Device

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the Name column, locate device and select checkbox.
- 3. Click **Enable**. (to enable device).
- 4. Click **Disable** (to disable device).

Set Device to On-Demand

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the *Name* column, locate device and select checkbox.
- 3. Click On-Demand.

Set Device as Default

WARNING: This restores the selected device back to it's original factory settings.

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. In the *Name* column, locate device and select checkbox.
- 3. Click Default.

Run Bounce DTR

This puts the DTR and RTS pins DOWN – waits 500ms, then put those pins UP.

- 1. Go to Managed Devices :: Devices.
- 2. In the *Name* column, locate device and select checkbox.
- 3. Click Bounce DTR.

Configure Individual Device Settings

Each device in the *Managed Devices*:: *Devices* table are individually configured. To gain access to a device's settings, locate it in the table, and click the **Name**. This displays the individual device settings in sub-tabs: **Access**, **Management**, **Logging**, **Custom Fields**, **Commands**.

In the procedures, the path is shown as:

Go to Device Management :: Devices :: <device name> :: <sub-tab>.

Alternately, select the checkbox next to the device name and click **Edit**.

Access sub-tab

Configure Serial Connections

The Nodegrid Platform supports RS-232 Serial connections with the available Serial and USB interfaces. Ports are automatically detected and shown in the Devices menu. To provide access to the target device, each port needs to be enabled and configured.

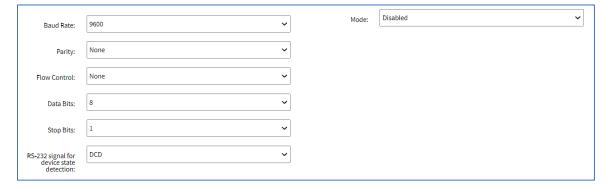

Before configuring the Nodegrid port, check the device manufacturer's console port settings. Most devices use default port settings: 9600,8,N,1

The Nodegrid Console Server S Series supports advanced auto-detection. This simplifies configuration with automatic detection of the cable pinout (Legacy and Cisco) and connection speed.

WebUI Procedure

Multiple devices can be selected for port settings.

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. On the **Access** sub-tab, scroll to the port settings:

On **Baud Rate** drop-down, select one (speed matching target device settings) or (**Auto**, **9600**, **19200**, **38400**, **57600**, **115200**).

On Parity drop-down, select one (None-default, Odd, Even)

- On Flow Control drop-down, select one (None-default, Software, Hardware)
- On Data Bits drop-down, select one (5,6,7,8-default)
- On **Stop Bits** drop-down, select one (1-default, 2)
- On RS-232 signal for device state detection drop-down, select one (DCD-default, None, CTS)
- On Mode drop-down, select one (Enabled, On-Demand, Disabled)
- 3. Click Save.

CLI Procedure

- 1. Go to /settings/devices
- 2. Use the edit command with the port name to change the port configuration. Multiple ports can be defined.
- 3. Use the show command to display current values.
- 4. Use the set command for:

```
baud_rate (set to the correct speed matching target device settings or to Auto)
parity (None (default), Odd, or Even)
flow_control (None (default), Software, Hardware)
data_bits (5, 6, 7, 8 (default))
stop_bits (1)
rs-232_signal_for_device_state_detection (DCD (default), None, CTS)
mode (Enabled, On-Demand, Disabled)
```

5. Use the commit command to change the settings.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# edit ttyS2
[admin@nodegrid {devices}]# show
name: ttyS2
type: local_serial
address_location =
coordinates =
web_url =
launch_url_via_html5 = yes
baud_rate = 9600
parity = None
flow_control = None
data bits = 8
stop_bits = 1
rs-232_signal_for_device_state_detection = DCD
enable_device_state_detection_based_in_data_flow = no
```

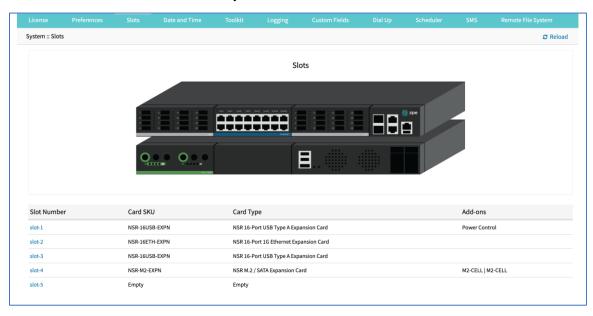

```
enable_hostname_detection = no
multisession = yes
read-write_multisession = no
icon = terminal.png
mode = disabled
skip authentication to access device = no
escape_sequence = ^Ec
power_control_key = ^0
show_text_information = yes
enable ip alias = no
enable_second_ip_alias = no
allow_SSH_protocol = yes
SSH_port =
allow_telnet_protocol = yes
telnet_port = 7002
allow binary socket = no
data_logging = no
[admin@nodegrid {devices}]# set mode=enabled baud_rate=Auto
[admin@nodegrid {devices}]# commit
```

Configure USB Passthrough Mode

WebUI Procedure

1. To confirm the USB card supports USB Passthrough, go to System :: Slots :: Supported cards . Check the Add-ons column for an entry: **Power Control**.

- 2. Go to Managed Devices :: Devices.
- 3. On the list, locate the USB and click the **Name** (displays dialog).
- 4. On the **Access** tab, *USB Mode* menu, select **Passthrough** radio button.

5. Click Save.

NOTE: When a device's Passthrough mode is enabled, its peer is also set to Passthrough mode.

Configure SSH Key Authentication

For added security, devices can be configured to authenticate via SSH keys. When enabled, SSH is connected with key pairs (user does not require password).

NOTE: Not all devices support this feature

Step 1 - Enable SSK Key Authentication WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Select Allow Pre-shared SSH Key checkbox.

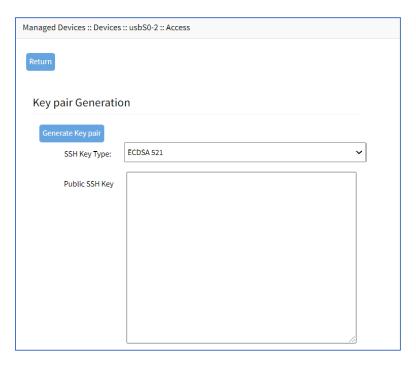

- 3. Click Save.
- 4. The **SSH Keys** button appears next to the **Save** and **Return** buttons.

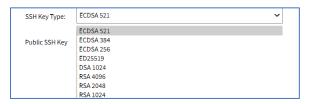

Step 2 - Generate a new SSH Key WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Click SSH Keys (displays Key-Pair dialog).

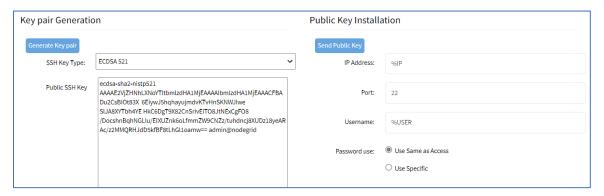

3. On **SSH Key Type** drop-down, select type.

4. Click Generate Pair Keys.

5. For **Password Use** setting, select **Use Same as Access** for the current account. Alternatively, select **Use Specific** and set new **Password** with **Confirm Password**.

6. Click **Send Public Key**. This sends the key to the device. On a connection to a Managed Device with Pre-shared SSH Key enabled, username is still required. If the device fails to authenticate, at the prompt, enter the password. If an error message displays, resolve and click again.

NOTE: Not all devices support the **Send Public Key** feature. If not, manually copy the **Public SSH Key** textbox contents to the device.

7. Click **Return** (goes back to the Access sub-tab view).

Enable Multi sessions

With multi-sessions enabled, several users can access the same device at the same time. All users see the same output. By default, the first user has read-write access, and all other users have read access. When the **Read-Write Multisession** option is enabled, all connected users have read-write access to the session. Because only one user at a time has write access, the system automatically switches to the first user entering keystrokes.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

- Select Multisession checkbox.
- 4. (optional) Select **Read-Write Multisession** checkbox.
- 5. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Set multisession to yes
- (optional) set write_multisession to yes
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set multisession=yes
[+admin@nodegrid /]# set read-write_multisession=yes
[+admin@nodegrid /]# commit
```

Enable Break Signal

When this is enabled, users can send a break signal via the SSH console session. This is enabled on a per-device basis. The break sequence is configurable.

NOTE: Not available for: usb_kvm, usb_sensor, usb_device, local_serial.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

- 3. Select the **Enable Send Break** checkbox.
- 4. (optional) Change Break Sequence.
- 5. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Set enable_send_break to yes
- 3. Adjust break_sequence, as needed
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set enable_send_break=yes
[+admin@nodegrid access]# set break_sequence=~break
[+admin@nodegrid access]# commit
```

Set Escape Sequences

Escape Sequences allow users to keep the current session active, and open another session. There are two types of escape sequences: open another normal session menu or open the power menu (for direct power control of a target device).

Both escape sequences are preset with a default value. This value can be changed, if needed.

Default Escape Sequences are:

```
Escape Sequence (^Ec) – Ctrl+Shift+E+c
Power Control Key (^O) – Ctrl+Shift+O
```

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

- 3. In Escape Sequence, enter new value.
- 4. In Power Control Key, enter new value.
- 5. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Adjust the escape_sequence or power_control_key, as needed.
- 3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set escape_sequence=^Ec
[+admin@nodegrid access]# set power_control_key=^O
[+admin@nodegrid access]# commit
```

Disable User Authentication

By default, user authentication is required to access a target device. If not required, Nodegrid authentication can be disabled for specific devices.

NOTE: This disables any Nodegrid authentication method for this device. It is recommended to configure an appropriate authentication mechanism.

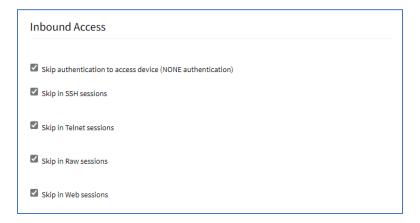

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to the Inbound Access menu.
- 3. Select the Skip authentication to access device (NONE authentication) checkbox.

4. When selected, additional checkboxes provide more detailed authentication options.

5. Click Save.

CLI Procedure

- Go to /settings/devices/<device name>/access
- 2. Set the skip_authentication_to_access_device to yes to disable authentication
- 3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set skip_authentication_to_access_device=yes
[+admin@nodegrid access]# commit
```

Enable/Set SSH Port and Telnet Port

Administrators can define a specific SSH or telnet port for the device. SSH and Telnet ports can be adjusted, as needed.

For SSH connections, the port setting is used for all connections.

For the Telnet port, each device has a unique assigned Telnet port (within the 7000+ range).

NOTE: SSHv1 is deprecated. Only SSHv2 is supported.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

Allow SSH protocol checkbox is enabled by default.

Allow Telnet protocol checkbox is enabled by default with a 7000+ Port number.

3. Enter the **SSH Port** value (applies to all connections).

NOTE: The SSH and Telnet protocols can be disabled, if required.

4. Click Save.

CLI Procedure - SSH

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command set allow_SSH_protocol to yes.
- 3. Use the set command to define a SSH_port number.
- 4. Save the changes with commit

CLI Procedure - Telnet

- Go to /settings/devices/<device name>/access
- 2. Use the set command set allow_telnet_protocol to yes
- 3. Use the set command to define a telnet port number
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set allow_SSH_protocol=yes
[+admin@nodegrid access]#set SSH_port=17001
[+admin@nodegrid access]#set allow_telnet_protocol=yes
[+admin@nodegrid access]#set telnet_port=7001
[+admin@nodegrid access]#commit
```

Set Binary Socket

With Binary Socket, third-party systems can directly access the device as if physically connected. Signals are transmitted directly and are not encapsulated in the telnet or SSH protocol. A specific port needs to be assigned.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

3. Select Allow Binary Socket checkbox and enter Port Number.

4. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command for allow_binary_socket to yes
- 3. Use the set command to define a tcp_socket_port number
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set allow_binary_socket=yes
[+admin@nodegrid access]#set tcp_socket_port=15001
[+admin@nodegrid access]#commit
```

Configure IP Aliases

Console sessions can be started from the WebUI, CLI console, or a SSH/telnet client. For a SSH client, the default method to access is to pass the target device name (as a parameter).

Port Aliases allow the user to connect to a target device with IP addresses. Each IP Alias supports the definition of a telnet with binary port. The allocation of up to two IP address alias are supported for each target device (IPv4 and IPv6 addresses).

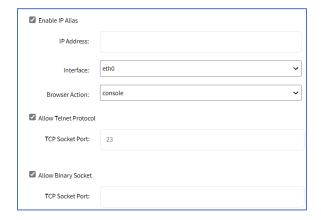

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll down to this section.

3. Select Enable IP Alias checkbox.

Enter IP Address.

On **Interface** drop-down, select one (eth0, eth1).

On Browser Action drop-down, select one (console, web).

Select Allow the Telnet Protocol checkbox and enter TCP Socket Port.

(if interface supports) Select Allow Binary Socket checkbox and enter TCP Socket Port.

- 4. (optional) Repeat for **Enable Second IP Alias** checkbox.
- 5. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command set enable_ip_alias to yes
- 3. Use the set command to define the following values:

```
ip alias - IP address
```

Interface (network interface to used)

ip_alias_telnet - enable/disable telnet

ip_alias_telnet_port - Telnet port to be used

ip_alias_binary - If the interface should support binary socket connections

- 4. Repeat these steps for enable_second_ip_alias
- 5. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set enable_ip_alias=yes
[+admin@nodegrid access]#set ip_alias=192.168.10.249
[+admin@nodegrid access]#set interface=eth0
[+admin@nodegrid access]#set ip_alias_telnet=yes
[+admin@nodegrid access]#set ip_alias_telnet_port=23
[+admin@nodegrid access]#set ip_alias_binary=no
```

```
[+admin@nodegrid access]#set ip_alias_binary_port=15001
[+admin@nodegrid access]#commit
```

Set Device Location

Each device can be associated with a location, displayed in the Map view. The location can be defined through address details or directly through Longitude and Latitude values. If provided with an address, the device requires an Internet connection to determine the longitude and latitude.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll to this section.

- 3. In **Address Location**, enter the full address. Click the **Compass** icon (to the right) to identify the latitude and longitude.
- 4. Alternatively, in **Coordinates (Lat., Lon)**, enter valid coordinates.
- 5. Click Save.

CLI Procedure

- Go to /settings/devices/<device name>/access
- 2. Use the set command to provide valid latitude and longitude coordinates
- 3. Alternatively, provide an address.
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set coordinates="37.5418582,-121.9750624"
[+admin@nodegrid access]#set address_location="46757 Fremont Blvd, Fremont, CA 94538,
USA"
[+admin@nodegrid access]#commit
```

NOTE: The CLI does not support the function to look up a address and convert it to valid latitude and longitude coordinates.

Enable Launch URL in HTML5

- Go to Managed Devices :: <device name> :: Access.
- 2. Scroll to this section.

WEB URL:		
Launch URL via HTML	5	

3. For **WEB URL**, adjust as needed.

A Web URL can be defined for each device. The URL is used for the WebUI, available for each device by default. The default URL (for all IP based sessions) is http://%IP where %IP will be replaced by the IP Address values defined for that device. By default, the URL opens inside an HTML5 frame which is forwarded to the client. This allows unsecured device web interfaces to be passed through without exposing the device to the network.

- 4. Select Launch URL via HTML5 checkbox.
- Click Save.

CLI Procedure

- Go to /settings/devices/<device name>/access
- 2. Use the set command to adjust the web_url
- 3. Enable or disable the launch of the URL in HTM5 window by setting launch_url_via_html5
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]#set web_url=https://%IP
[+admin@nodegrid access]#set launch_url_via_html5=yes
[+admin@nodegrid access]#commit
```

Enable Launch URL via Forwarder

(Chrome browser only) This requires Chrome Forwarder extension. This reduces resource usage by redirecting to a web server. This provides the same behavior as the HTML5 frame. The device's interface can be viewed in full-screen mode rather than a windowed frame.

Install Chrome Forwarder Extension

- 1. Open Google Chrome and go to https://chrome.google.com/webstore/detail/nodegrid-web-access-exten/cmcpkbfnablakhllgdmbhkedpoengpik
- Click Add to Chrome.
- 3. When the extension is installed, it is ready to use.

WebUI Procedure

- 2. Select Launch URL via Forwarder checkbox.
- Click Save.

Assign Icon to Device

An icon can be defined for each device. Different icons can define different device types.

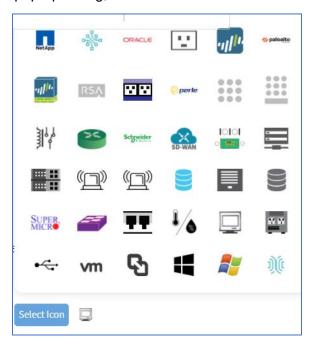

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll to this section.

3. Click **Select Icon** .On the pop-up dialog, select an icon.

4. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command to adjust the icon to a valid value. Use tab-tab at this point to see a list of valid values.
- 3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]#set icon=switch.png
[+admin@nodegrid access]#commit
```

Select Device Mode

Mode defines how the device is managed by the Nodegrid Platform and how device status is confirmed.

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll to this section.

3. On the **Mode** drop-down, select a mode.

Disabled (No sessions can be opened to it and Nodegrid does not check if the device is reachable.)

Enabled (Sessions can be started and Nodegrid actively checks if it is reachable.)

On-Demand (A session can be started. Nodegrid does not check if a device is reachable)

Discovered (System status only and cannot be selected. Device is disabled. No sessions can be opened. Nodegrid does not check if the device is reachable. This mode indicates the device was added to the system through a discovery process.)

4. Click Save.

CLI Procedure

- Go to /settings/devices/<device name>/access
- 2. Use the set command to adjust the mode to:

enabled

disabled

on-demand

3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]#set mode=enabled
[+admin@nodegrid access]#commit
```

Set Device Expiration

This feature is only available for IP-based devices. Each device has a defined expiration date or days. Once expired, the device automatically becomes unavailable (default: Never). The device and data remains in the system until removed by an admin.

NOTE: With VM devices, both Date and Days are synced with the ESXi Servers where the VMs are constantly being added, moved, and deleted, or if the Nodegrid managed device license becomes available.

WebUI Procedure

1. Go to Managed Devices :: <device name> :: Access.

2. Scroll to this section.

3. In the *Expiration* menu, select radio button for: **Never**, **Expiration Date** or **Expiration Days** and provide an appropriate value.

Date (YYYY-MM-DD) The device is available until the specified date. After that date, it is set to Disabled mode, and the admin user has 10 days to take action. After 10 days, the device and its data is removed from the system.

Days (between 1 and 999999999) If no update on the device's configuration after the specified days, the device and its data is removed from the System (similar to a timeout).

4. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command to adjust expiration:

never

date

set expiration_date with valid entry YYYY-MM-DD

days

set expiration_days with a valid number 0 and 9999999999

Save the changes with commit.

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]#set expiration=date
[+admin@nodegrid access]#set expiration_date=2020-01-01
[+admin@nodegrid access]#commit

or

[admin@nodegrid /]#set expiration=days
[+admin@nodegrid access]#set expiration_days=5
[+admin@nodegrid access]#commit

Or
```

[admin@nodegrid /]#set expiration=never

Enable Device State Detection

This is a device state detection that indicates if a device is currently available.

For serial devices – By default, Nodegrid uses DCD or CTS signals for serial devices. If these signals do not exist for a specific device, the device state detection can be changed to use data flow. For data flow, the state is based on actual data transmitted by the device. To function, this must be enabled.

For IP Devices – By default, this is a monitored active SSH session. The ICMP (ping) check can be enabled to check if active. This requires **Enable device state detection based on network traffic (icmp)** be enabled.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Access.
- 2. Scroll to this section.
- 3. In the *Device State Detection* menu, select one:

For serial: select Enable device state detection based in data flow checkbox.

For other devices: select **Enable device state detection based on network traffic (icmp)** checkbox.

Enable device state detection based on network traffic (icmp)

4. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/access
- 2. Use the set command to enable the device state detection

For serial:

enable_device_state_detection_based_in_data_flow

For other devices:

enable_device_state_detection_based_on_network_traffic

3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]#set enable_device_state_detection_based_in_data_flow=yes
```

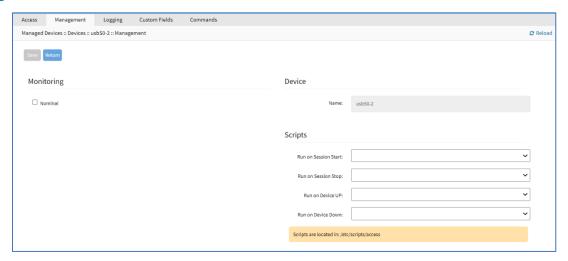

or

[admin@nodegrid /]#set enable_device_state_detection_based_on_network_traffic=yes

[+admin@nodegrid access]#commit

Management sub-tab

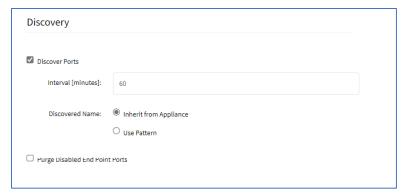

Configure Discovery (Appliances only)

This configures the discovery process for the Appliance (i.e., Console Server).

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Management.
- 2. Scroll to this section.

3. Select Discovery Ports checkbox.

Enter Set Interval (minutes).

In Discovered Name menu, select one:

Inherit from Appliance radio button

Use Pattern radio button

4. (optional) Select Purge Disabled End Point Ports checkbox.

5. Click Save.

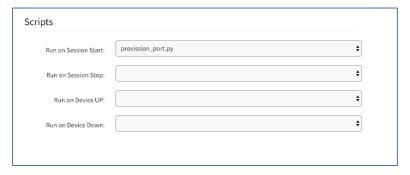

Run Custom Scripts on Device Status Change

Users can assign custom scripts to specific device status changes. This is normally used when a specific status change occurs, and a pre-defined action is needed. The customer or a professional services provider can create the custom script.

Copy the scripts to /etc/scripts/access folder before assignment to a device status condition. Each script must be executable with user privileges.

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Management.
- 2. Scroll to this section.

- 3. In the Scripts menu, select an available script for the appropriate device status drop-down list:
 - On Run on Session Start drop-down, select one.
 - On Run on Session Stop drop-down, select one.
 - On Run on Device UP drop-down, select one.
 - On Run on Device Down drop-down, select one.
- 4. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/management
- 2. Use the set command to assign a script to a device status
 - on_session_start
 - on_session_stop

on_device_up
on_device_down

3. Save the changes with commit.

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/management/
[admin@nodegrid /]#set on_session_start=sessionstart.sh
[+admin@nodegrid management]#commit
```

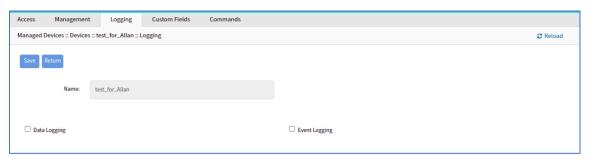

Logging sub-tab

Data logs capture all session information sent and received from a device. This feature is available to log all text-based sessions (serial or SSH-based).

Data Logging and Event Logging can be configured to collect information and create event notifications, based on custom scripts triggered by events. Defined alert strings (simple text match or regular expression pattern) are evaluated against the data source stream (during data collection). Events are generated for each match.

NOTE: Custom scripts can be created by the customer or a professional services provider.

For data log events, copy scripts to the /etc/scripts/datalog folder. For event logs, copy scripts to /etc/scripts/events folder. Each script must be executable with user privileges.

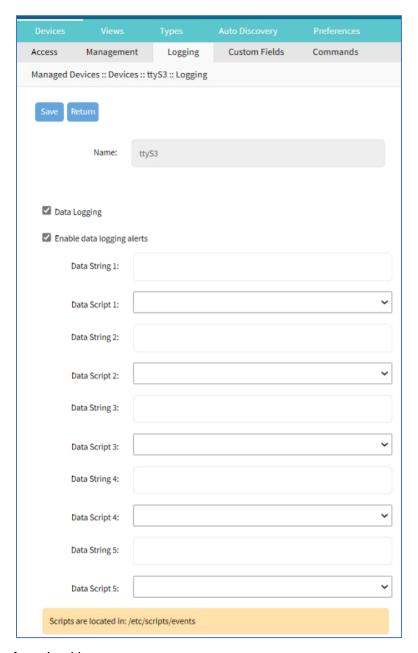

Enable Data Logging and Triggered Alerts

Session data is recorded even if no user is connected. System messages are logged when pushed to console sessions. Location of data logs (local or remote) is based on Auditing settings.

- 1. Go to Managed Devices :: <device name> :: Logging.
- 2. Scroll to this section.

- 3. Select Data Logging checkbox.
- 4. Select Enable data logging alerts checkbox.

Enter **Data String 1** (that triggers alert).

On Data Script 1 drop-down, select a script.

Repeat for additional triggers.

5. Click Save.

CLI Procedure

1. Go to /settings/devices/<device name>/logging

- 2. Use the set command to change the data_logging value to yes.
- 3. Use the set command to change the enable_data_logging_alerts value to yes.
- 4. Define for data_string_1 string or regular expression which will be matched against the data stream.
- 5. Define for data_script_1 an available script in case a custom script should be executed.
- 6. If needed, repeat for data_string_2 and data_script_2.
- 7. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/logging/
[admin@nodegrid /]#set data_logging=yes
[+admin@nodegrid logging]#set enable_data_logging_alerts=yes
[+admin@nodegrid logging]#set data_string_1="String"
[+admin@nodegrid logging]#set data_script_1=ShutdownDevice_sample.sh
[+admin@nodegrid logging]#commit
```

Enable Event Logging and Triggered Alerts

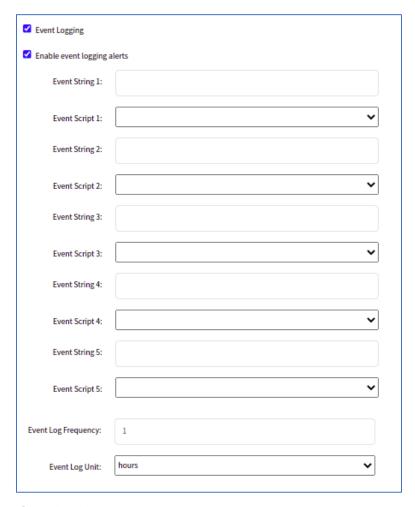

NOTE: If *Event Logging* does not appear on the **Logging** sub-tab, it is not available on the selected device.

This feature logs events for Service Processor and IPMI sessions. When enabled, the System collects Service Processor Event Log data. The type of collected data depends on the Service Process functions and configuration.

The settings control the interval of collected information (# = 1-999, and time = minutes-hour). Location of data logs (local or remote) is based on *Auditing* section settings.

- 1. Go to Managed Devices :: <device name> :: Logging.
- 2. Scroll to this section.

- 3. Select **Event Logging** checkbox.
- 4. Select Enable Event Logging Alerts checkbox.

Enter **Event String 1** (that triggers alert).

On Event Script 1 drop-down, select one.

Repeat for additional triggers.

- 5. Adjust Event Log Frequency (1 min to 9999 hours) or Event Log Unit values, as needed
- 6. Click Save.

CLI Procedure

- 1. Go to /settings/devices/<device name>/logging
- 2. Use the set command to change the event_logging value to yes
- Use the set command to adjust event_log_frequency and event_log_unit as needed: event_log_frequency range from 1 - 9999 event_log_unit options hours or minutes
- Use the set command to change the enable_event_logging_alerts value to yes
 ©2022 ZPE Systems, Inc.

- 5. For event_string_1, define the text string or regular expression (to be matched against the data stream).
- 6. For event_script_1 define an available script (if a custom script should be executed).
- 7. As needed, define event_string_2 and event_script_2.
- 8. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/ipmi/logging/
[admin@nodegrid /]#set event_logging=yes
[+admin@nodegrid logging]#set event_log_frequency=1
[+admin@nodegrid logging]#set event_log_unit=hours
[+admin@nodegrid logging]#set enable_event_logging_alerts=yes
[+admin@nodegrid logging]#set event_string_1="String"
[+admin@nodegrid logging]#set event_script_1=PowerCycleDevice_sample.sh
[+admin@nodegrid logging]#commit
```

Custom Fields sub-tab

Each device type has a collection of commands to access device of that type. Generally, the default configuration is sufficient and is the recommended option.

As needed, admin users can:

Disable or change existing commands

Enable any (by default) disabled commands

Assign custom commands to a device

Remove access to specific commands from certain users or groups (with user and group authorization)

Admin changes to the default command settings affect all users and require careful consideration.

Commands available on a device depend on the device type. For example, the KVM command (enable Service Processor KVM session support) is only available to Service Processor devices. The Outlet command is available to all device types.

Custom Commands can be created with custom scripts, for all device types. Custom Commands can support for a wide range of different functions (such as additional session options and specific custom device tasks).

NOTE: Custom scripts can be created by the customer or a professional services provider.

Add Custom Field

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Custom Fields.
- 2. Click Add (displays dialog).

- 3. Enter Field Name.
- 4. Enter Field Value.
- 5. Click Save.

Edit Custom Field

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Custom Fields.
- 2. Locate the custom field and select the checkbox.
- 3. Click **Edit** (displays dialog).

- 4. Edit the Field Value, as needed.
- 5. Click Save.

Delete Custom Field

- 1. Go to Managed Devices :: <device name> :: Custom Fields.
- 2. Locate the custom field and select the checkbox.
- 3. Click Delete.

4. On the dialog, click **OK**.

Commands sub-tab

While Custom Commands can be executed through the WebUI and CLI, feedback and output of Custom Commands is only available on the CLI and not on the WebUI.

About Custom Scripts

Custom scripts required the following conditions:

Written in Python

"Command label" must match a function within the script

Located in /etc/scripts/custom_commands

Custom script example:

```
# FILE NAME: custom_command.py
import os
def shell_script_global_env(dev):
   # User variables
   int_var = 1234
   bool_var = False
   str_var = "Hello World"
   # Setting global environment variables
   # Use lower_case format names to not change system variables accidentally
   # Use string values
   os.environ['device_name'] = dev.device_name
   os.environ['device_ip'] = dev.ip
   os.environ['int_var'] = str(int_var)
   os.environ['bool_var'] = str(bool_var)
   os.environ['str_var'] = str_var
   shell_script_path = "/etc/scripts/custom_commands/echo_environment.sh"
   # Call shell script
   os.system(shell_script_path)
```

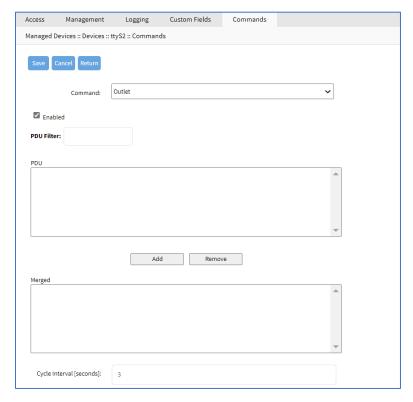

Create Commands (Outlet, SSH, Telnet, Web)

This integrates Out-of-Band and Console-like configurations with the In-Band command.

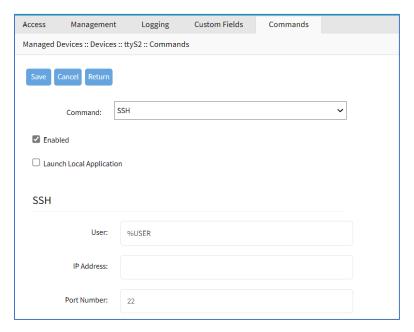

- 1. Copy the custom script into /etc/scripts/custom_commands
- Go to Managed Devices :: Oevices :: <device name> :: Commands.
- 3. Click **Add** (displays dialog).
- 4. In **Command** drop-down, select one (dialog changes depending on selection).

Command drop-down selection: Outlet. Enter details as needed.

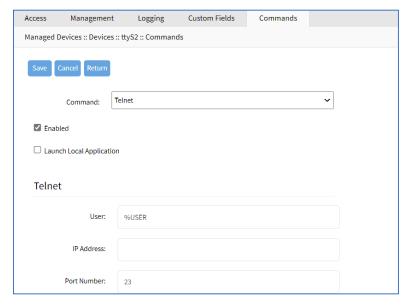

Command drop-down selection: SSH. Enter details as needed.

Command drop-down selection: Telnet. Enter details as needed.

Command drop-down selection: Web (if available). Select Enabled checkbox..

5. When done, click Save.

Device Access via RDP

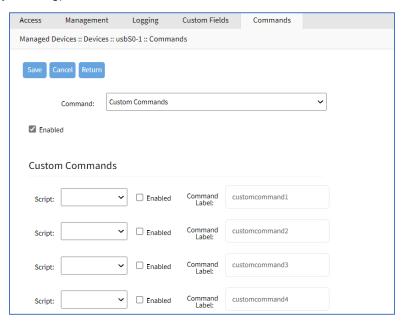

WebUI Procedure

- 1. Go to Managed Devices :: <device name> :: Commands.
- 2. Click Add (displays dialog).
- 3. In **Command** drop-down, select **KVM**.
- 4. Select Enabled checkbox.
- 5. On **Protocol** drop-down, select one:
- 6. On Type Extension drop-down, select one.
- 7. Click Save.

Create Custom Commands

- 1. Go to Managed Devices :: <device name> :: Commands.
- 2. Click Add (displays dialog).

- 3. In Command drop-down, select Custom Commands.
- 4. Select Enable checkbox.
- 5. In Custom Commands menu

On **Script** drop-down, select one.

Next to drop-down, select **Enabled** checkbox.

Adjust **Command Label** to match the command option in the script.

- 6. As needed, repeat for additional Scripts.
- 7. Click Save.

CLI Procedure

- Go to /settings/devices/<device name>/commands
- 2. Use the add command to create a new custom field.
- 3. Use the set command to define a field_name and field_value.
- 4. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Serial_Console/commands/
[admin@nodegrid /]#add
[+admin@nodegrid commands]#set command=custom_commands
[+admin@nodegrid commands]#set custom_command_enabled1=yes
[+admin@nodegrid commands]#set custom_command_script1=SSH.py
[+admin@nodegrid commands]#set custom_command_label1=SSH
```

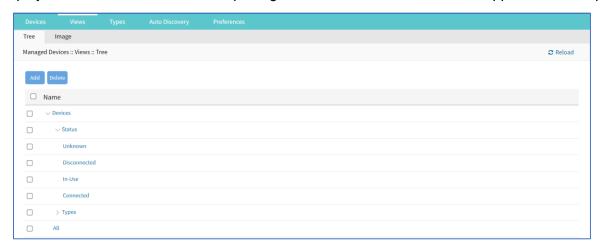

[+admin@nodegrid commands]#commit

Views tab

On this page, an admin can create and manage a device-based tree structure. This can be configured for specific organizational or physical structure layouts. Groups may also be used to aggregate monitoring values like a rack or room level.

Tree sub-tab

This displays the tree structure. On first opening, the roots are shown: Devices, Appliances, Groups.

View Tree Branches

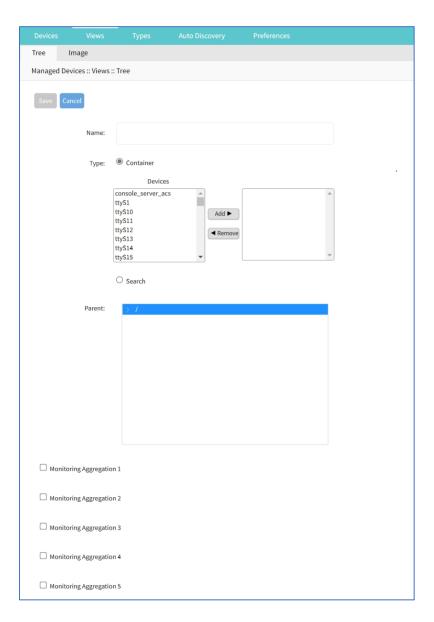

WebUI Procedure

- 1. Click the right icon to display the next branch level.
- 2. If further branch levels are available, click the right icon to expand the branch.
- 3. To contract the branch, click the down \square icon.

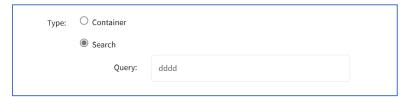

Add a Branch Item

- 1. Go to Managed Devices :: Views :: Tree.
- 2. Click Add (displays dialog).

- 3. Enter a Name.
- 4. To include in *Contains*, in *Devices* panel, select and click **Add**▶ button (moves selected item to the right panel. To remove to right panel, select and click **◄Remove**.
- 5. To search for an item, select **Search** radio button. Opens a search dialog to locate and select.

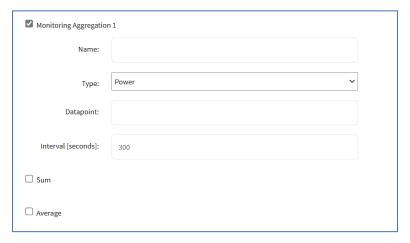

6. To select a **Parent**, click on the solid bar, expand the tree to locate the parent for this addition.

7. As needed, select Monitoring Aggregation checkbox.

Enter Name

On Type drop-down, select one (Power, Apparent Power, Power Factor, Current, Voltage, Frequency, Temperature, Humidity, Fan Speed, Time Left, Counter, Percent).

Enter Datapoint.

Enter Interval (seconds).

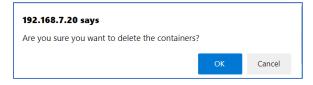

Select Sum checkbox or Average checkbox.

- 8. (as needed) Repeat for other Aggregations.
- 9. When done, click Save.

Delete a Branch Item

WebUI Procedure

- 1. Go to Managed Devices :: Views :: Tree.
- 2. Click Delete.

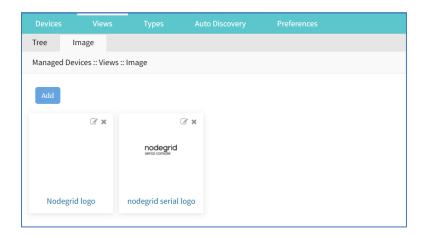

3. On the confirmation dialog, click **OK**.

Image sub-tab

Available images are shown on this page.

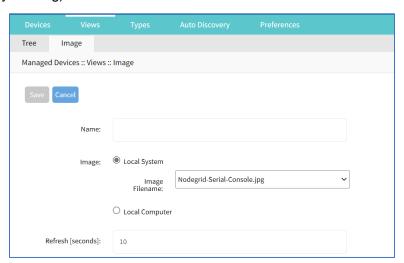

Add Image

WebUI Procedure

- 1. Go to Managed Devices :: Views :: Image.
- 2. Click Add (displays dialog).

- 3. Enter Name.
- 4. In Image menu:

Select **Local System** radio button, then select from the **Image Filename** drop-down.

Select Local Computer radio button.

Click Choose File, then locate and select the graphic file.

5. Click Save.

Edit Image Details

WebUI Procedure

- 1. Go to Managed Devices :: Views :: Image.
- 2. Click on an image.
- 3. Right-click on the image to display the properties dialog and select *Mode*.

- 4. Enter Name.
- 5. In Mode menu, select one:

Disabled radio button:

Query radio button:

Enter Query

Enter Field

Script radio button:

On Script drop-down, select one.

6. In Threshold menu:

Enter a Threshold value

On the **Comparison** drop-down select one

Click Icon and select from the dialog

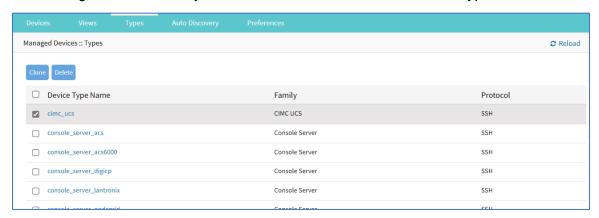

(as needed) Enter details for another Threshold.

7. Click Save.

Types tab

Administrators can manage Device Type settings for customized versions of existing device types. There are situations when the device type default value does not match with customer's default values. The admin can clone, edit, or delete existing device types. Settings can be adjusted as needed. When saved, new settings are immediately effective for all devices with that device type.

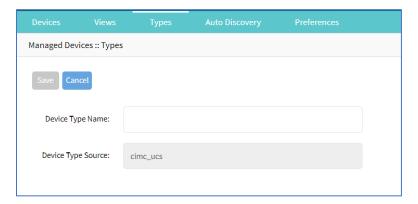

Manage Types

Clone a Type

- 1. Go to Managed Devices :: Types.
- 2. Locate and select the checkbox of the type to be cloned.
- 3. Click Clone (displays dialog)

- 4. Enter Device Type Name.
- 5. Click Save.

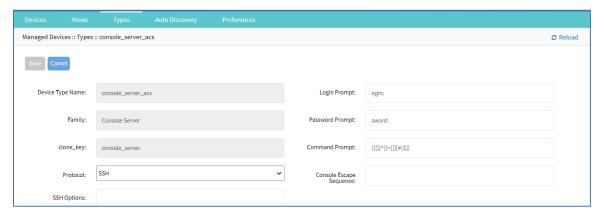

Clone Validation

Ensure the source device is correctly configured. After the clone is created, use this verification process:

- 1. Access the clone to verify username, password and IP address is correct.
- 2. Audit the log files to verify data logging and event logging settings are correct.
- 3. Simulate events and check if any notification is created.
- 4. Verify events are detected on the data and event logs.
- 5. Verify that the device is in the correct authorization group with proper access rights.

Edit a Device Type

- 1. Go to Managed Devices :: Types.
- 2. In the *Device Type Name* column, locate and click on the name.

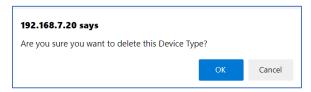

- 3. Modify details as needed:
- 4. Click Save.

Delete a Type

WebUI Procedure

- 1. Go to Managed Devices :: Types.
- 2. Locate and select the checkbox to be deleted.
- 3. Click **Delete** (displays confirmation dialog).

4. Click OK.

Auto Discovery tab

The System automatically discovers and adds network devices, enabled ports on console servers, KVM switches, and VMware (virtual serial ports and virtual machines).

Auto Discovery General Process

- Create a template device. (For each target device type, a template device must be created.)
 Clone is recommended. The template needs to include all the settings as for an end device, except connection details to the discovered devices.
- 2. For network devices, create a Network Scan.
- 3. For virtual machines, create a Virtual Manager.
- 4. For all devices, create a Discovery Rule.
 - Discovery rules must be associated with the template device. These rules determine action taken on every discovered device.
- 5. Start the discovery process.

This process automatically starts when a device is added to the Nodegrid Platform. A manual discovery process can be started from the WebUI (*Managed Devices :: Auto Discovery :: Discover Now*) or CLI (/settings/auto_discovery/discover_now/).

Configure Auto Discovery of Console Server and KVM Switch Ports

The Console Server appliance and KVM Switches can be discovered using the Network Devices process. Use the Auto Discovery process to automatically add and configure managed devices for third-party console server ports and KVM switch ports.

Step 1 – Create a Template Device

The device must be created first. In this process, only enter the details listed.

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click Add (displays dialog).
- 3. Enter **Name** (of the template).
- 4. In the **Type** drop-down, select one (console_server_acs, console_server_acs6000, console_server_lantronix, console_server_opengear, console_server_digicp, console_server_raritan, console_server_perle).
- 5. For IP Address, enter 127.0.0.1
- Select Ask During Login checkbox.
- 7. In End Point menu, select one

Serial Port radio button.

KVM Port radio button.

Enter Port Number.

- 8. On **Mode** drop-down, select **Disabled** (ensures the device is not displayed on the Access page).
- 9. Click Save.

CLI Procedure

- Go to /settings/devices
- 2. Use the add command to create a new device.
- 3. Use the set command to define the following settings:

name

type (console_server_acs, console_server_acs6000, console_server_lantronix, console_server_opengear, console_server_digicp, console_server_raritan, console_server_perle)

ip address as 127.0.0.1

Set credential to Ask During Login

endpoint (serial_port or kvm_port)

port_number (port number)

Set mode to disabled

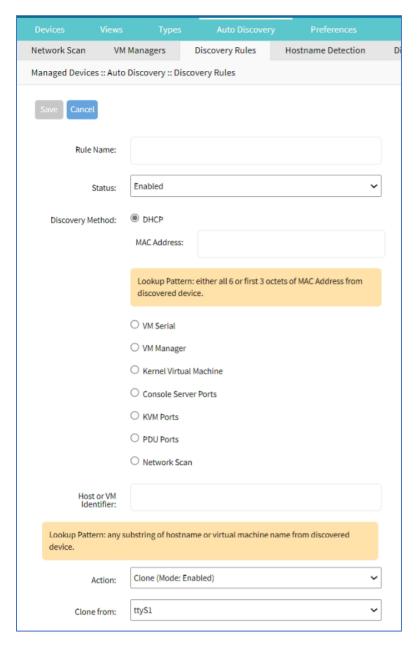

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Console_Server_Port_Template
[admin@nodegrid {devices}]# set type=console_server_acs6000
[admin@nodegrid {devices}]# set ip_address=192.168.2.151
[admin@nodegrid {devices}]# set end_point=serial_port
[admin@nodegrid {devices}]# set port_number=1
[admin@nodegrid {devices}]# set credential=ask_during_login
[admin@nodegrid {devices}]# set mode=disabled
[admin@nodegrid {devices}]# commit
```

Step 2 - Create a Discovery Rule

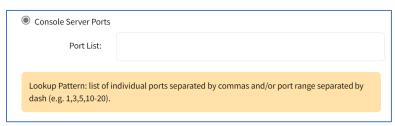

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- 2. Click Add (displays dialog).

- 3. Enter Rule Name.
- 4. On Status drop-down, select one (Enabled, Disabled).
- 5. In Discovery Method menu, select one:

Console Server Ports radio button. Enter **Port List** (list of ports to scan (i.e., 1,3,5,10-20).

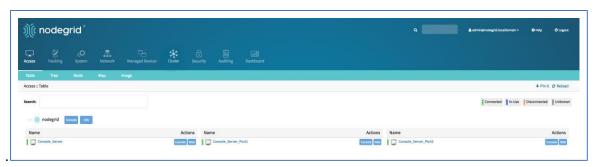

KVM Ports radio button. Enter **Port List** (list of ports to scan (i.e., 1,3,5,10-20).

- 6. (optional) In *Host or VM Identifier* menu, enter parameter to further filter (if provided, part of port name must match value).
- 7. On Action drop-down, select what to do when a new device is discovered (Clone (Mode: Enabled), Clone (Mode: On-Demand), Clone (Mode: Discovered), Discard Discovered Devices).
- 8. In the Clone from drop-down, select the template device (created earlier).
- 9. Click Save.

After the appliance is created, the Nodegrid Platform automatically starts discovering attached devices (based on the created Discovery Rules).

This process takes several minutes.

CLI Procedure

- Go to /settings/auto_discovery/discovery_rules/
- 2. Use the add command to create a Discovery Rule.
- 3. Use the set command to define the following settings:

rule_name (for the Discovery Rule)

status for the rule (enabled, disabled)

method set to console_server_ports or kvm_ports

port_list (list of ports which should be scanned – i.e., 1,3,5,10-20)

host_identifier parameter (apply as a filter)

(If a value is provided, part of the port name must match the value.)

4. For action (enter action taken when a new device is discovered) (clone_mode_enabled, clone_mode_on-demand, clone_mode_discovered, discard_device).

- clone_from (template device created earlier).
- 6. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/discovery_rules/
[admin@nodegrid discovery_rules]# add

[admin@nodegrid {discovery_rules}]# set rule_name=Console_Server_Ports
[admin@nodegrid {discovery_rules}]# set status=enabled
[admin@nodegrid {discovery_rules}]# set method=console_server_ports
[admin@nodegrid {discovery_rules}]# set port_list=1-48
[admin@nodegrid {discovery_rules}]# set action=clone_mode_enabled
[admin@nodegrid {discovery_rules}]# set clone_from=Console_Server_Ports_Template
[admin@nodegrid {discovery_rules}]# commit
```

After the appliance was created, the Nodegrid Platform automatically starts discovery of attached devices based on the created Discovery Rules.

This process takes several minutes.

Clone Validation

When a clone is created, ensure the source device is correctly configured. After the clone is created, use this verification process:

- 1. Access the clone to verify username, password and IP address is correct.
- Audit the log files to verify data logging and event logging settings are correct.
- 3. Simulate events and check if any notification is created.
- 4. Verify events are detected on the data and event logs.
- 5. Verify that the device is in the correct authorization group with proper access rights.

Configure Auto Discovery of Network Devices

Network appliances can be automatically discovered and added to the Nodegrid Platform. This includes appliances which support Telnet, SSH, ICMP, Console Servers, KVM Switches or IMPI protocols plus others.

Appliances can be discovered through various methods, in combination or singly:

- Similar Devices (select one of the devices from the drop-down),
- Port Scan and enter a list of ports in the Port List field,
- Ping
- DHCP (via MAC Address)

Setup is a three-step process.

Step 1 – Create a Template Device

The device must be created first. In this process, only enter the details listed.

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click Add (displays dialog).
- 3. Enter **Name** (of the template).
- 4. In the **Type** drop-down, select one (device_console, ilo, imm, drac, idrac6, ipmi1.5, impi2.0, ilom, cimc_ucs, netapp, infrabox, pdu).
- 5. For IP Address, enter 127.0.0.1
- 6. Enter Username
- 7. Enter Password and Confirm Password.

Alternatively, select **Ask During Login** checkbox (user credentials are entered during login).

- 8. On **Mode** drop-down, select **Disabled** (ensures the device is not displayed on the Access page).
- 9. Click Save.

CLI Procedure

- Go to /settings/devices
- 2. Use the add command to create a new device.
- 3. Use the set command to define the following settings:

name

type (device_console, ilo, imm, drac, idrac6, ipmi1.5, impi2.0, ilom, cimc_ucs, netapp, infrabox, pdu*)

ip_address as 127.0.0.1

username and password (of the device) or set credential ask_during_login

set mode to disabled

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Network_Template
[admin@nodegrid {devices}]# set type=device_console
[admin@nodegrid {devices}]# set ip_address=127.0.0.1
[admin@nodegrid {devices}]# set credential=ask_during_login

or

[admin@nodegrid {devices}]# set credential=set_now
[admin@nodegrid {devices}]# set username=admin password=admin
```

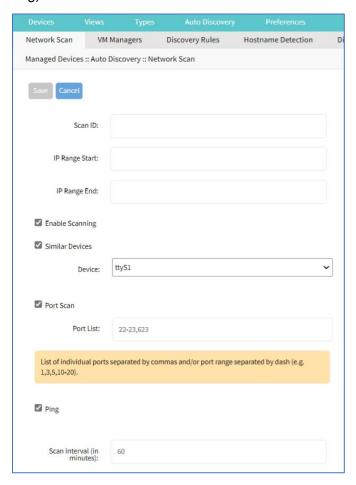

[admin@nodegrid {devices}]# set mode=disabled
[admin@nodegrid {devices}]# commit

Step 2 - Create a Network Scan

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Network Scan.
- 2. Click Add (displays dialog).

- 3. Enter Name (of Scan ID).
- 4. Enter IP Range Start.
- 5. Enter IP Range End.
- 6. Select Similar Devices checkbox.

On **Device** drop-down, select an existing template (to identify devices).

- 7. Select Enable Scanning checkbox.
- 8. Select Port Scan checkbox.

Enter **Port List** (ports to be scanned, i.e., 2, 3, 11-20).

- 9. Select **Ping** checkbox (enables Ping function).
- 10. In Scan interval (in minutes), enter a value.
- 11. Click Save.

CLI Procedure

- 1. Go to /settings/auto_discovery/network_scan/
- 2. Use the add command to create a Network Scan.
- 3. Use the set command to define the following settings:

```
scan_id (name for the Network Scan)
```

ip_range_start and ip_range_end (define a network range to be scanned)

Set enable_scanning to yes to enable the scan

4. Define one or more of the three scan methods:

```
similar_devices (set device to match one of the existing devices or templates port_scan (set to yes)
set port_list (to a list of ports reachable on the device)
ping (no further settings are required)
```

- 5. Set scan_interval (when to scan, in minutes).
- 6. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/network_scan/
[admin@nodegrid network_scan]# add
[+admin@nodegrid {network_scan}]# set scan_id=SSH_Console
[+admin@nodegrid {network_scan}]# set ip_range_start=192.168.10.1
[+admin@nodegrid {network_scan}]# set ip_range_end=192.168.10.254
[+admin@nodegrid {network_scan}]# set enable_scanning=yes
[+admin@nodegrid {network_scan}]# set similar_devices=yes
[+admin@nodegrid {network_scan}]# set device= network_template
[+admin@nodegrid {network_scan}]# set port_scan=yes
[+admin@nodegrid {network_scan}]# set port_list=22
[+admin@nodegrid {network_scan}]# set ping=no
[+admin@nodegrid {network_scan}]# set scan_interval=100
[+admin@nodegrid {network_scan}]# commit
```

Step 3 - Create a Discovery Rule

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- Click Add (displays dialog).
- 3. Enter Name (of the Discovery Rule).

©2022 ZPE Systems, Inc.

- 4. On **Status** drop-down, select (**Enabled**, **Disabled**).
- 5. In **Discovery Method** menu:

Select **Network Scan** checkbox.

- 6. On Scan ID drop-down, select the created Network Scan ID.
- 7. (optional) In *Host or VM Identifier* menu, enter parameter to further filter (if provided, part of port name must match value).
- 8. On Action drop-down, select what to do when a new device is discovered (Clone (Mode: Enabled), Clone (Mode: On-Demand), Clone (Mode: Discovered), Discard Discovered Devices).
- 9. In the **Clone from** drop-down, select the template device created earlier.
- 10. Click Save.

The Nodegrid Platform automatically starts discovering devices, based on the created Discovery Rules.

This process takes several minutes.

CLI Procedure

- Go to /settings/auto_discovery/discovery_rules/
- 2. Use the add command to create a Discovery Rule.
- 3. Use the set command to define the following settings:

```
rule_name for the Discovery Rule
```

status for the discovered rule (enabled, disabled)

method set to network scan

scan_id select a Network Scan ID created earlier

host_identifier parameter to further filer, if provided - part of the port name must match the value)

- 4. For action, select what should be done on a new device discovery (clone_mode_enabled, clone_mode_on-demand, clone_mode_discovered, discard_device).
- 5. clone_from set to the template device created earlier.
- 6. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/discovery_rules/
[admin@nodegrid discovery_rules]# add
[admin@nodegrid {discovery_rules}]# set rule_name=Network_Scan
[admin@nodegrid {discovery_rules}]# set status=enabled
[admin@nodegrid {discovery_rules}]# set method=network_scan

[admin@nodegrid {discovery_rules}]# set scan_id=SSH_Console
[admin@nodegrid {discovery_rules}]# set action=clone_mode_enabled
[admin@nodegrid {discovery_rules}]# set clone_from=Network_Template
```

[admin@nodegrid {discovery_rules}]# commit

The Nodegrid Platform automatically starts discovering devices, based on the created Discovery Rules.

This process takes several minutes.

Configure Auto Discovery of Virtual Machines

Virtual Machines which are managed by VMWare vCenter or run on ESXi can be discovered and managed directly on Nodegrid. The process will regularly scan vCenter or the ESXi host and detect newly added Virtual Machines. The virtual machines can be added as type virtual_console_vmware or virtual_serial_port.

NOTE: The free version of ESXi is not supported.

Step 1 - Create a Template Device

The device must be created first. In this process, only enter the details listed.

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- Click Add (displays dialog).
- 3. Enter **Name** (of the template).
- 4. In the **Type** drop-down, select one (virtual_console_vmware).
- 5. For **IP Address**, enter **127.0.0.1**
- 6. Enter **Username**.
- 7. Enter Password and Confirm Password.

Alternatively, select **Ask During Login** checkbox (user credentials are entered during login).

- 8. Select **Mode Disabled** checkbox (ensures device is not displayed on Access page).
- 9. Click Save.

CLI Procedure

- 1. Go to /settings/devices
- 2. Use the add command to create a new device.
- 3. Use the set command to define the following settings:

name

type (virtual_console_vmware)

ip address as 127.0.0.1

set mode to disabled

4. Save the changes with commit.

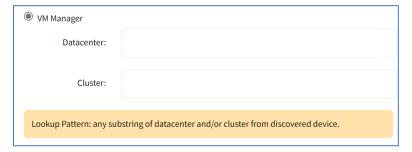

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Virtual_Machine_Template
[admin@nodegrid {devices}]# set type=virtual_console_vmware
[admin@nodegrid {devices}]# set ip_address=192.168.2.151
[admin@nodegrid {devices}]# set mode=disabled
[admin@nodegrid {devices}]# commit
```

Step 2 - Create a Discovery Rule

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- 2. Click **Add** (displays dialog).
- 3. Enter Rule Name.
- 4. On **Status** drop-down, select an item (**Enabled**, **Disabled**).
- 5. In *Discovery Method* menu, select **VM Manager**.

(optional) To filter the scan, enter Datacenter and Cluster.

- 6. (optional) In *Host or VM Identifier* menu, enter parameter to further filter (if provided, part of port name must match value).
- 7. On Action drop-down, select what to do when a new device is discovered (Clone (Mode: Enabled), Clone (Mode: On-Demand), Clone (Mode: Discovered), Discard Discovered Devices).
- 8. In the **Clone from** drop-down, select the template device (created earlier).
- 9. Click Save.

CLI Procedure

- 1. Go to /settings/auto_discovery/discovery_rules/
- 2. Use the add command to create a Discovery Rule.
- 3. Use the set command to define the following settings:
 - rule_name for the Discovery Rule
 - status for the discovered rule (enabled, disabled)

method set to vm_manager

Use datacenter and cluster to define filters based on Data Center and or Cluster

host_identifier parameter (apply as a filter)

(If a value is provided, part of the port name must match the value.)

- 4. For action (enter action taken when a new device is discovered) (clone_mode_enabled, clone_mode_on-demand, clone_mode_discovered, discard_device).
- clone_from (template device created earlier).
- 6. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/discovery_rules/
[admin@nodegrid discovery_rules]# add
[admin@nodegrid {discovery_rules}]# set rule_name=Virtual_Machine
[admin@nodegrid {discovery_rules}]# set status=enabled
[admin@nodegrid {discovery_rules}]# set method=vm_manager
[admin@nodegrid {discovery_rules}]# set action=clone_mode_enabled
[admin@nodegrid {discovery_rules}]# set clone_from=Vitual_Machine_Template
[admin@nodegrid {discovery_rules}]# commit
```

Step 3 - Define a VM Manager

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: VM Managers.
- 2. Click Add (displays dialog).
- 3. In VM Server, enter the vCenter/ESXi IP or FQDN.
- 4. Enter **Username**.
- 5. On Virtualization Type drop-down, select VMware.
- 6. Enter Password and Confirm Password.
- 7. Enter **HTML console port** (if needed).
- 8. Click Save.

The Nodegrid Platform connects to the vCenter or ESXi system.

This process takes several minutes.

CLI Procedure

- 1. Go to /settings/auto_discovery/vm_managers/
- 2. Use the add command to create a VM Manager.
- 3. Use the set command to define the following settings:

vm_server (vCenter/ESXi IP or FQDN)

Define username and password

Adjust the html_console_port (if needed)

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/vm_managers/
[admin@nodegrid vm_managers]# add
[admin@nodegrid {vm_managers}]# set vm_server=vCenter
[admin@nodegrid {vm_managers}]# set username=admin
[admin@nodegrid {vm_managers}]# set password=password
[admin@nodegrid {vm_managers}]# commit
```

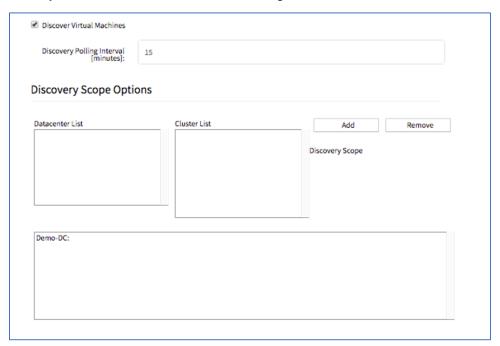

The Nodegrid Platform connects to the vCenter or ESXi system.

This process takes several minutes.

Step 4 – Enable Discover Virtual Machines

WebUI Procedure

Click on the newly created and connected VM Manager.

- 2. Select Discover Virtual Machines checkbox.
- 3. In **Discovery Polling Interval (minutes)**, enter a value.
- 4. Click Save.

CLI Procedure

- 1. Log into the newly created VM Manager
- 2. Enable Discover Virtual Machines option.

- 3. Define the Data Center and Discovery Polling Interval.
- Save the changes with commit.

```
[admin@nodegrid 192.168.2.217]# set html_console_port=7331,7343
[admin@nodegrid 192.168.2.217]# set discover_virtual_machines=yes
[admin@nodegrid 192.168.2.217]# set interval_in_minutes=15
[admin@nodegrid 192.168.2.217]# set discovery_scope=Demo-DC!
[admin@nodegrid 192.168.2.217]# commit
```

Configure Auto Discovery of DHCP Clients

The Nodegrid Platform can be used as a DHCP Server for Clients within the management network. These devices can be automatically discovered and added to the Nodegrid platform. This feature only supports DHCP Clients that receive DHCP lease from the local Nodegrid Platform.

Step 1 - Create a Template Device

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click Add (displays dialog).
- 3. Enter **Name** (of the template).
- 4. For IP Address, enter 127.0.0.1
- 5. In the **Type** drop-down field, select one (device_console, ilo, imm, drac, idrac6, ipmi1.5, impi2.0, ilom, cimc_ucs, netapp, infrabox, pdu*).
- 6. Enter **Username**.
- 7. Enter Password and Confirm Password.

Alternatively, select **Ask During Login** checkbox (user credentials are entered during login).

- 8. Select **Mode Disabled** checkbox (ensures device is not displayed on Access page).
- 9. Click Save.

CLI Procedure

- Go to /settings/devices
- 2. Use the add command to create a new device,
- 3. Use the set command to define the following settings:

name

type (device_console, ilo, imm, drac, idrac6, ipmi1.5, impi2.0, ilom, cimc_ucs, netapp, infrabox, pdu*)

ip_address as 127.0.0.1

username and password (of the device) or set credential ask_during_login

Set mode to disabled

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Network_Template
[admin@nodegrid {devices}]# set type=device_console
[admin@nodegrid {devices}]# set ip_address=127.0.0.1
[admin@nodegrid {devices}]# set credential=ask_during_login

or

[admin@nodegrid {devices}]# set credential=set_now
[admin@nodegrid {devices}]# set username=admin password=admin
[admin@nodegrid {devices}]# set mode=disabled
[admin@nodegrid {devices}]# commit
```

Step 2 - Create a Discovery Rule

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules
- 2. Click Add (displays dialog).
- 3. Enter Name.
- 4. On **Status** drop-down, select (**Enabled**, **Disabled**).
- 5. On Discovery Method menu:

Select **DHCP** checkbox.

- 6. (optional) To filter specific entries, enter **MAC Address**.
- 7. (optional) In *Host or VM Identifier* menu, enter parameter to further filter (if provided, part of port name must match value).
- 8. On Action drop-down, select what to do when a new device is discovered (Clone (Mode: Enabled), Clone (Mode: On-Demand), Clone (Mode: Discovered), Discard Discovered Devices).
- 9. In the **Clone from** drop-down, select the template device created earlier
- 10. Click Save.

After the rule is created, the device is automatically added to the system as soon as it receives a DHCP address or renews its DHCP address lease. The default for the address lease renewal is every 10 minutes.

CLI Procedure

- 1. Go to /settings/auto_discovery/discovery_rules/
- 2. Use the add command to create a Discovery Rule.
- 3. Use the set command to define the following settings:

```
rule_name for the Discovery Rule
```

status for the discovered rule (enabled, disabled)

method set to dhcp

(optional) use the mac_address field to filter to these specific entries

host_identifier parameter can be used to further apply a filter if a value is provided then part of the port name has to match the value

action - select what should be performed when a new device is discovered (clone_mode_enabled, clone_mode_on-demand, clone_mode_discovered, discard_device)

- 4. clone_from set to the template device created earlier.
- 5. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/discovery_rules/
[admin@nodegrid discovery_rules]# add

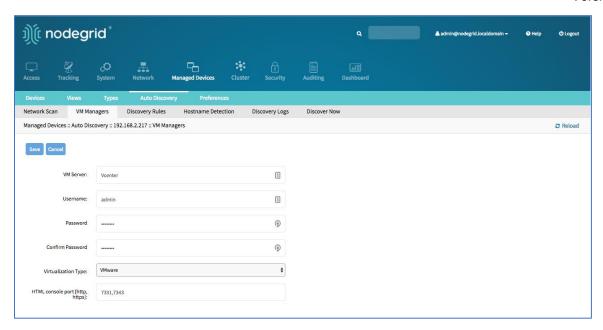

[admin@nodegrid {discovery_rules}]# set rule_name=Network_Scan
[admin@nodegrid {discovery_rules}]# set status=enabled
[admin@nodegrid {discovery_rules}]# set method=dhcp
[admin@nodegrid {discovery_rules}]# set mac_address=00:0C:29
[admin@nodegrid {discovery_rules}]# set action=clone_mode_enabled
[admin@nodegrid {discovery_rules}]# set clone_from=Network_Template
[admin@nodegrid {discovery_rules}]# commit
```

Configure Auto Discovery of VMware Virtual Machine

Step 1 – Add VMware Virtual Manager

- 1. Go to Managed Devices :: Auto Discovery :: VM Managers.
- Click Add (displays dialog).

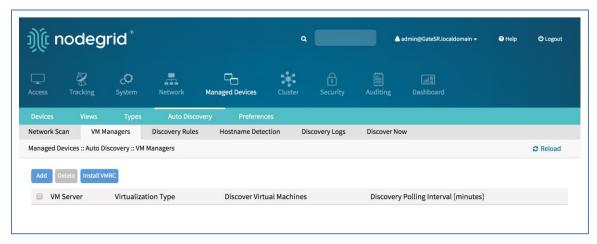

- 3. In **VM Server**, enter *vCenter/ESXi* **IP** or **FQDN**.
- 4. Enter Username.
- 5. Enter Password and Confirm Password.
- (if needed) Enter HTML console port.
- 7. Click Save.

Step 2 - Install VMRC

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: VM Managers.
- 2. Click Install VMRC.

This sets up graphical device connections and console access to virtual machines.

CLI Procedure

- 1. Go to /settings/auto_discovery/vm_managers/
- 2. Use the add command to create a VM Manager.
- 3. Use the set command to define the following settings:

```
vm_server (vCenter/ESXi IP or FQDN)
username and password (of the device)
or set credential ask_during_login
Adjust the html_console_port (if needed)
```

4. Save the changes with commit.

```
[admin@nodegrid /]# cd /settings/auto_discovery/vm_managers/
[admin@nodegrid vm_managers]# add
[admin@nodegrid {vm_managers}]# set vm_server=vCenter
[admin@nodegrid {vm_managers}]# set username=admin
[admin@nodegrid {vm_managers}]# set password=password
[admin@nodegrid {vm_managers}]# commit
```

Step 3 - Add VMware Virtual Machine

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click Add (displays dialog).
- Enter Name (of the Virtual Machine).

This must match the Hypervisor Name.

- 4. In the **Type** drop-down, select type (virtual_console_vmware).
- 5. (optional) Enter IP Address.
- 6. In **VM Manager** drop-down, select the correct hypervisor.
- 7. Click Save.

CLI Procedure

- 1. Go to /settings/devices
- 2. Use the add command to create a new device.
- 3. Use the set command to define the following settings:

```
name
type (virtual_console_vmware)
(optional) ip_address
vm_manager (existing VM Manager)
```

4. Save the changes with commit

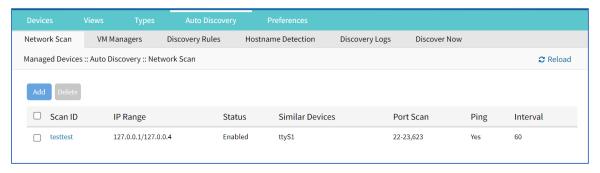

©2022 ZPE Systems, Inc.

```
[admin@nodegrid /]# cd /settings/devices
[admin@nodegrid devices]# add
[admin@nodegrid {devices}]# set name=Virtual_Machine
[admin@nodegrid {devices}]# set type=virtual_console_vmware
[admin@nodegrid {devices}]# set ip_address=192.168.2.151
[admin@nodegrid {devices}]# set vm_manager=192.168.10.11
[admin@nodegrid {devices}]# commit
```

Network Scan sub-tab

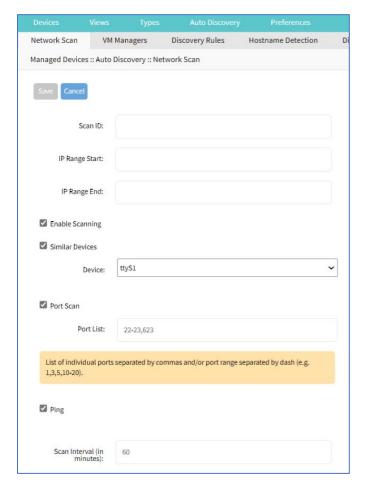

This lists available network scan setups.

Add Network Scan

- 1. Go to Managed Devices :: Auto Discovery :: Network Scan.
- 2. Click Add (displays dialog).

- 3. Enter Name (of Scan ID).
- 4. Enter IP Range Start.
- 5. Enter IP Range End.
- 6. Select Similar Devices checkbox.

On **Device** drop-down, select an existing template (to identify devices).

- 7. Select Enable Scanning checkbox.
- 8. Select Port Scan checkbox.

Enter **Port List** (ports to be scanned, i.e., 2, 3, 11-20).

- 9. Select Ping checkbox (enables Ping function).
- 10. In Scan interval (in minutes), enter a value.
- 11. Click Save.

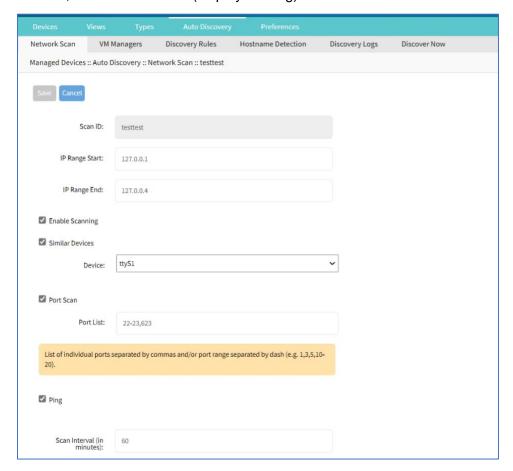

Edit Network Scan

WebUI Procedure

1. Go to Managed Devices :: Auto Discovery :: Network Scan.

2. In Scan ID column, click on the name (displays dialog).

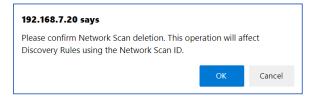

- 3. Make changes as needed.
- 4. Click Save.

Delete Network Scan

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Network Scan.
- Select the checkbox(es) of items to delete.
- 3. Click **Delete** (displays confirmation dialog).

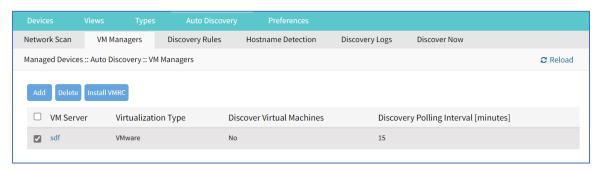

4. Click OK.

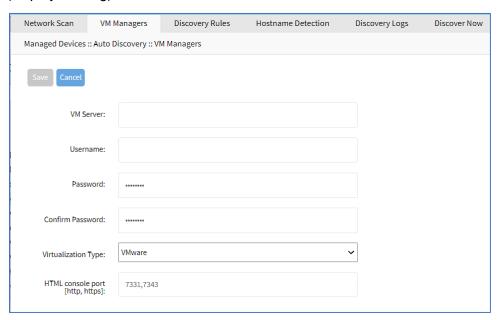

VM Manager sub-tab

This lists VM Managers.

Add VM Manager

- 1. Go to Managed Devices :: Auto Discovery :: VM Managers.
- 2. Click Add (displays dialog).

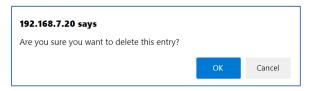

- 3. In **VM Server**, enter the *vCenter/ESXi* **IP** or **FQDN**.
- 4. Enter Username.
- 5. On Virtualization Type drop-down, select VMware.
- 6. Enter Password and Confirm Password.
- 7. Enter HTML console port (if needed).
- 8. Click Save.

Delete VM Manager

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: VM Managers.
- Select the checkbox(es) of items to delete.
- 3. Click **Delete** (displays confirmation dialog).

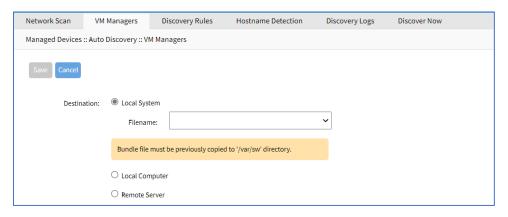

4. Click OK.

Install VMRC

WebUI Procedure

- Go to Managed Devices :: Auto Discovery :: VM Managers.
- Click Install VMRC (displays dialog).

3. In *Destination* menu, select one:

Local System radio button . On Filename, select from drop-down

Local Computer radio button. On File Name, click Choose File (locate and select).

Remote Server radio button. Enter URL, Username, and Password.

(as needed) Select **Download path is absolute path name** checkbox.

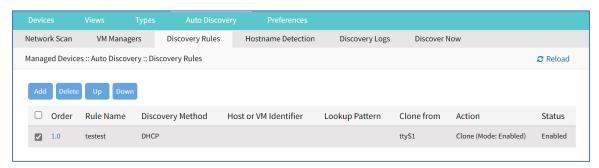

4. Click Save.

Discovery Rules sub-tab

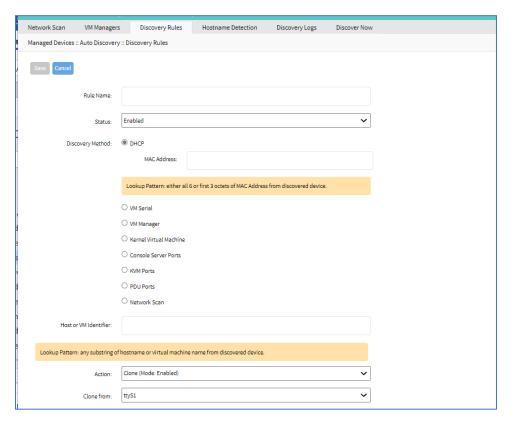

This lists all available discovery rules.

Add Discovery Rule

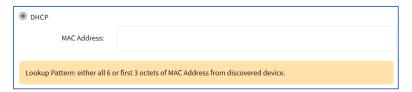

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- Click Add (displays dialog).

- 3. Enter Rule Name.
- 4. On Status drop-down, select (Enabled, Disabled).
- 5. In Discovery Method menu, select one and enter associated details.

DHCP radio button

VM Serial radio button

VM Manager radio button

Kernel Virtual Machine radio button

Console Server Ports radio button

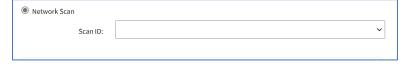

KVM Ports radio button

PDU Ports radio button

Network Scan radio button

- 6. (optional) To filter specific entries, enter MAC Address (not available for some selections).
- 7. (optional) In *Host or VM Identifier* menu, enter parameter to further filter (if provided, part of port name must match value).
- 8. On Action drop-down, select what to do when a new device is discovered (Clone (Mode: Enabled), Clone (Mode: On-Demand), Clone (Mode: Discovered), Discard Discovered Devices).
- 9. On **Clone from** drop-down, select appropriate template device.

10. Click Save.

Edit Discovery Rule

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- 2. In the Order column, click on the name (displays dialog).
- 3. Make changes as needed.
- 4. Click Save.

Delete Discovery Rule

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- 2. Select the checkbox(es) of items to delete.
- 3. Click **Delete** (displays confirmation dialog).

4. Click OK.

Move Discovery Rule Priorities

WebUI Procedure

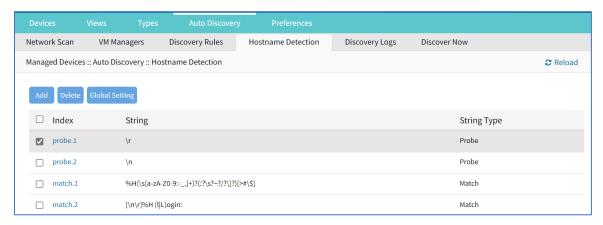

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Rules.
- 2. Select the checkbox(es) of items.
- 3. Click **Up** or **Down** to move the sequence.

Hostname Detection sub-tab

Hostname (network or serial) is automatically discovered when logged into the Nodegrid Platform, based on user access permissions. By default, Nodegrid devices include probes and matches for these device types: PDUs, NetApp, Console Servers, Device Consoles, and Service Processors.

Nodegrid sends a probe and waits for a match. If no match, a second probe is sent. This is repeated until a match occurs, then the probe process stops.

Enable Hostname Detection

Hostname detection must be enabled on the target device. After hostname detection is enabled, it runs only once and then reverts to disabled.

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click on the device Name (displays dialog).
- 3. Select Enable Hostname Detection checkbox.

4. Click Save.

CLI Procedure

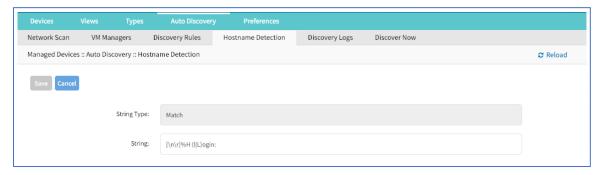

- 1. Go to /settings/devices/<device name>/access
- 2. Set enable_hostname_detection to yes
- 3. Save the changes with commit

```
[admin@nodegrid /]# /settings/devices/Device_Console_Serial/access/
[admin@nodegrid /]# set enable_hostname_detection=yes
[+admin@nodegrid /]# commit
```

Create a Probe or Match

- 1. Go to Managed Devices :: Auto Discovery :: Hostname Detection.
- 2. Click **Add** (displays dialog).

- 3. On String Type drop-down, select one (Match, Probe).
- 4. Enter String (characters for Match or Probe).

NOTE: For Matches, RegEx expressions are allowed. Use the variable %H to indicate the location of the hostname.

Click Save.

CLI Procedure

- 1. Go to /settings/auto_discovery/hostname_detection/string_settings
- Type add
- 3. Use the set command to define string_type (match, probe)
- 4. Use the set command to define a probe or match string
- 5. Make active
- 6. Save the changes with commit

NOTE: For Matches RegEx expressions are allowed. Use the variable %H to indicate the location of the hostname

```
[admin@nodegrid /]# /settings/auto_discovery/hostname_detection/string_settings
[admin@nodegrid /]# add
[admin@nodegrid /]# set string_type=match
[+admin@nodegrid /]# set match_string=[\a\r]%H{I|L)ogin:
[+admin@nodegrid /]# active
[+admin@nodegrid /]# commit
```

Delete a Probe or Match

- 1. Go to Managed Devices :: Auto Discovery :: Hostname Detection.
- 2. Select checkbox(es).
- Click **Delete** (displays confirmation dialog).

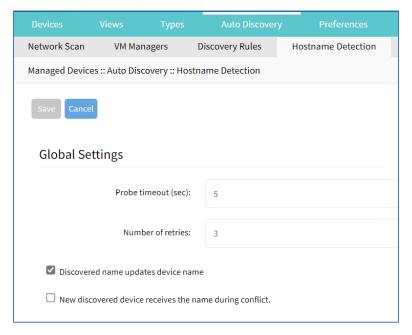

Click OK.

Modify Global Setting

1. Go to Managed Devices :: Auto Discovery :: Hostname Detection.

2. Click Global Settings (displays dialog).

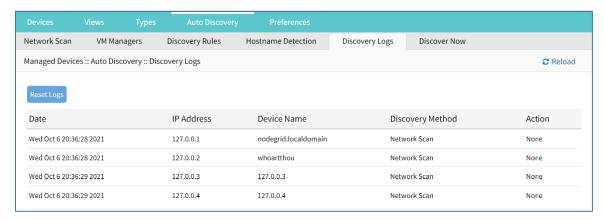

- 3. Enter Probe timeout (sec) (wait for output).
- 4. Enter **Number of retries** (number of times probe is resent if no output).
- Select Discovered name updates device name checkbox (enabled by default)If disabled, no devices names are updated, even if a match was found.)
- Select New discovered device receives the name during conflict checkbox.
 If enabled and multiple devices have the same name, the latest discovered device receives the name.
- 7. Click Save.

Discovery Logs sub-tab

This displays the available Auto Discovery logs.

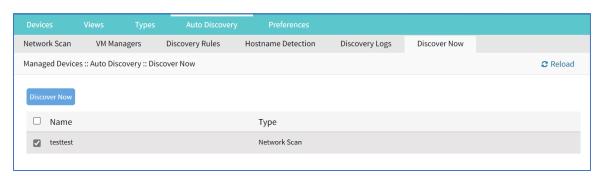

Reset Logs

WebUI Procedure

- 1. Go to Managed Devices :: Auto Discovery :: Discovery Logs.
- 2. Click Reset Logs (clears the table listing).

Discover Now sub-tab

Start Discovery

- 1. Go to Managed Devices :: Auto Discovery :: Discover Now.
- 2. On the list, select checkboxes.
- Click Discover Now.

This manually runs the auto discovery process for the selected item(s).

Preferences tab

Administrators can define various preferences options that are applied to all sessions.

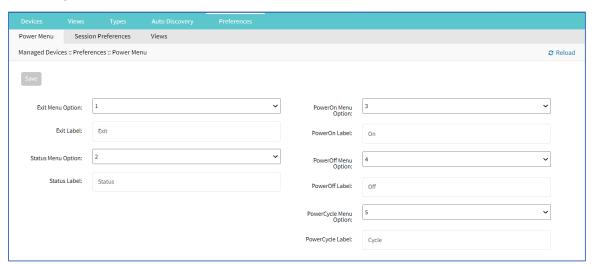

Power Menu sub-tab

This configures preferences for defined order and labeling of the power menu as it appears in a console session.

Edit Power Menu Settings

WebUI Procedure

1. Go to Managed Devices :: Preferences :: Power Menu.

2. On Exit Menu Option drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7, 8, 9).

Enter Exit Label.

3. On Status Menu Option drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7, 8, 9).

Enter Status Label.

4. On PowerOn Menu Option drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7, 8, 9).

Enter PowerOn Label.

5. On PowerOff Menu Option drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7, 8, 9).

Enter PowerOff Label.

6. On PowerCycle Menu Option drop-down, select one (0, 1, 2, 3, 4, 5, 6, 7, 8, 9).

Enter PowerCycle Label.

7. Click Save.

Session Preferences sub-tab

This defines session preferences. Often, it is difficult to exist a specific console session without affecting other sessions in the chain. The Disconnect HotKey closes the current active session in a chain. Configuring this hot key is useful when multiple sessions are open, i.e., a console session started from within a console session; or cascaded console sessions.

Configure Disconnect HotKey to Terminate Session

WebUI Procedure

1. Go to Managed Devices :: Preferences :: Session Preferences.

- 2. In **Disconnect HotKey**, create a key sequence to signals a terminate session.
- 3. Select Terminate session checkbox.

When enabled, on Disconnect HotKey, all connected sessions are closed – and the user is returned to the main shell prompt.

If disabled, on Disconnect HotKey, only the current session is closed.

4. Click Save.

Views sub-tab

This changes how columns are displayed, as well as creating custom columns.

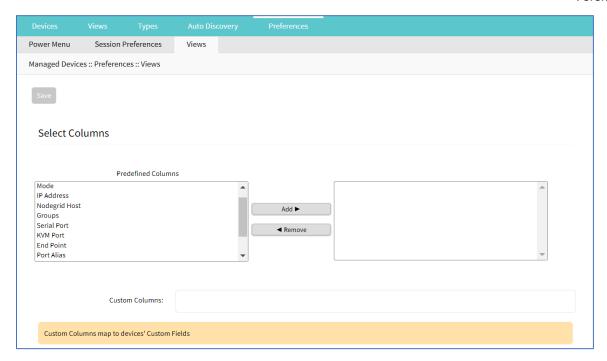

Change Table Column Preferences

Column selections and arrangements are stored on the local computer. This column layout is not available when logged into another device.

WebUI Procedure

Go to Managed Devices :: Preferences :: Views.

2. To add columns to right panel:

In *Predefined Columns*, select and click **Add**▶.

- To remove columns from right panel:
 In right side panel, select and click ◀Remove.
- 4. Click Save.

Step 1 – Create Custom Columns (per Device)

These provide additional organization of data on connected devices, custom columns can be created and enabled. This is a two-step process. First create the custom column, then add the custom column(s) to the individual device.

This two-step procedure connects the device's custom column to the device's custom field displayed in tables that contain that device's settings/values.

WebUI Procedure

- 1. Go to Managed Devices :: Preferences :: Views.
- 2. In the **Custom Columns** text box, enter the name.

3. To add multiple columns, separate each name with a comma.

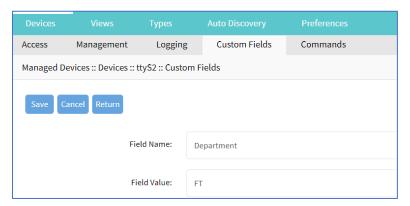

4. Click Save.

NOTE: The new custom column(s) do not appear on the *Access :: Devices* page until the associated device and column is enabled.

Step 2 - Associate Device to the new Custom Field

WebUI Procedure

- 1. Go to Managed Devices :: Devices.
- 2. Click the device name to be associated with the custom field.
- 3. On Custom Fields sub-tab, click Add (displays dialog).

- 4. Enter **Field Name** (must exactly match name entered in the *Custom Columns* dialog).
- 5. Enter Field Value.
- 6. Click Save.

Cluster Section

Cluster establishes a secure and resilient connection with a set of Nodegrid devices. When enabled, a Nodegrid device that is part of the Cluster can access and manage other devices. By logging into any Nodegrid device, all devices in the Cluster can be reached with a single interface. This allows for vertical and horizontal scalability.

There are two types of clustering topologies:

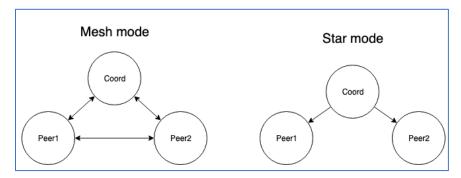

STAR

This is the default option. In a star configuration, one Nodegrid unit acts as the coordinator and central node. All the other peers connect to the coordinator in a star formation. Only the coordinator has the list of all peers and attached devices within the configuration. This option allows centralized access and visibility from the coordinator Nodegrid device.

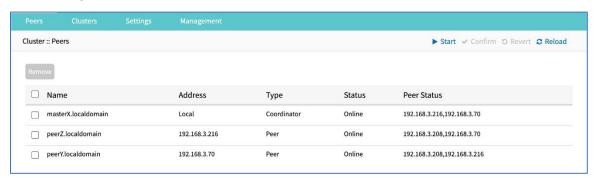

MESH

In this configuration, one Nodegrid unit acts as the coordinator and all Nodegrid units (coordinator and peers) see each other (and all attached devices). This option allows for distributed access. Each unit keeps a list of all peers and attached devices and demands equal system resources of all devices. This configuration is recommended for clusters of less than 50 units.

Peers tab

This lists all Nodegrid devices enrolled in the cluster. The table shows information on each device.

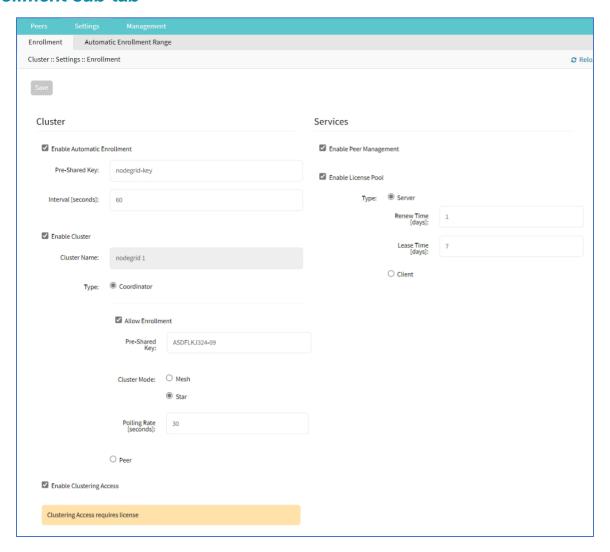

Settings tab

This configures Cluster settings and additional services such as Peer Management and License Pool.

NOTE: The Cluster feature requires a software license for each node in the cluster.

Enrollment sub-tab

Description of Settings

Automatic Enrollment

With Automatic Enrollment, new Nodegrid devices can automatically become available to an existing cluster. For Peers, this is enabled by default. The Pre-Shared Key setting must be the same on the Coordinator (set by default to **nodegrid-key**). The Interval setting only applies to the Coordinator and regulates how often invitations are sent to potential peers.

Cluster Enablement

When enabled, each Cluster requires one Coordinator that controls enrollment of peer systems. The first unit in the Cluster must be the Coordinator. All other units are Peers. When a Peer device is set to the Coordinator role, the change is automatically propagated. The previous Coordinator device is changed to Peer. Ensure the Coordinator device has Allow Enrollment selected. This provides a Cluster Name and Pre-Shared Key to enroll peers (and used in each Peer's settings). The Cluster Mode can be Star or Mesh.

In MESH, the Coordinator is only required for the enrollment of the peers. Once all Nodegrid systems were enrolled in the Cluster, the Coordinator can be set to Peer (prevents enrollment of other devices.)

Peer Management

This allows Nodegrid device hardware to be centrally upgraded. The upgrade process for remote devices is done on the cluster's Management page. The firmware applied to the units must be hosted on a central location, available through a URL (URL should include the remote server's IP or hostname, file path, and the ISO file. If the status shows Disabled, that device has Peer Management disabled.

License Pool

When enabled, the License Pool allows central management of all software licenses within a cluster. At least one device must be configured as the License Pool Server. In STAR mode, this must be the Coordinator. License Pool Clients automatically request required licenses from the License Pool Server. The Server checks availability and assigns as needed. The client sends a renew request based on the Renew Time. If client is unavailable for an extended time (exceeding the servers Lease Time), the client's licenses become invalid. The license is returned to the pool.

NOTE: Each Nodegrid device is shipped with five additional test target licenses. A test license is used automatically when a target license is added to the system. This also applies if a target license is applied on the License Pool Server. The first time a device requests target licenses, it requests five additional licenses to cover the currently used test licenses.

Configure Cluster

WebUI Procedure

- 1. Go to Cluster :: Settings :: Enrollment.
- 2. In the Cluster menu:

Select Enable Automatic Enrollment checkbox (expands to show additional fields)

Enter **Pre-shared Key** (default: nodegrid key).

Enter Interval (seconds).

Select **Enable Cluster** checkbox (allows other Nodegrid systems to manage, access, and search managed devices from other nodes)

In Type menu, select one:

Coordinator radio button

Enter Pre-Shared Key.

In Cluster Mode menu, select one (Star, Mesh).

Enter Polling Rate (seconds).

Peer radio button

For Coordinator's Address (accept default: localhost).

Enter **Pre-Shared Key**.

Select Enable Clustering Access checkbox.

3. In Services menu:

Select Enable Peer Management checkbox.

Select Enable License Pool checkbox

In Type menu, select one.

Server radio button

Enter Renew Time (days).

Enter Lease Time (days) (7-30 days)

Client radio button

4. Click Save.

Automatic Enrollment Range sub-tab

After the Coordinator is enabled and configured, the admin user can add a range of IPs for other Nodegrid devices on the network. This range eliminates the need to go to each Nodegrid node and manually set each as peers.

NOTE: It is recommended to only add IP's to the Automatic Enrollment Range which are potentially Nodegrid units. When set, invitations are continually sent to all IP's until a Nodegrid device is identified on a specific IP, and then is added to the Cluster.

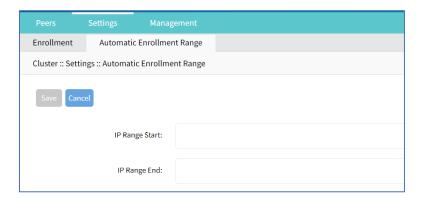

NOTE: An existing IP range setting cannot be modified. If an adjustment is needed, create a new IP range and delete the old IP range.

Add Automatic Enrollment Range

- 1. Go to Cluster :: Settings :: Automatic Enrollment Range.
- 2. Click Add (displays dialog).

- 3. Enter IP Range Start.
- 4. Enter IP Range End.
- 5. Click Save.

Delete Automatic Enrollment Range

WebUI Procedure

- 1. Go to Cluster :: Settings :: Automatic Enrollment Range.
- 2. Select checkbox next to IP range to delete.
- 3. Click Delete.
- 4. On the pop-up dialog, click **OK**.

Management tab

Software Upgrade

To use the restore configuration option, the Nodegrid software version must match the version used to create the restoration file. For example: if the configuration file was created in version 4.2 and Nodegrid is currently on version 5.0, Nodegrid must be downgraded to version 4.2 before the restoration file can be used.

Upgrade the Software

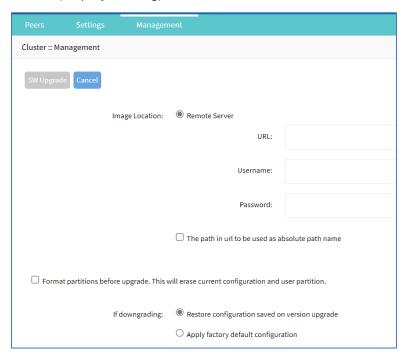

Software can be upgraded or downgraded on this procedure.

WebUI Procedure

1. Go to Cluster :: Management.

- Select checkbox next to the name for software management.
- 3. Click **Upgrade Software** (displays dialog).

4. In Image Location menu, select Remote Server.

Enter URL.

Enter Username.

Enter Password.

- 5. (as needed) Select **The path in url to be used as absolute path name** checkbox.
- 6. (as needed) Select Format partitions before upgrade. This will erase current configuration and user partition checkbox.
- 7. (if applicable) In *If downgrading* menu (select one):

Restore configuration saved on version upgrade radio button

Apply factory default configuration radio button.

- 8. Review the details.
- 9. Click SW Upgrade.

Security Section

Local Accounts tab

New local users can be added, deleted, changed, and locked. Administrators can force passwords to be changed upon next login, and set expiration dates for user accounts. Administrators can manage API keys for each account.

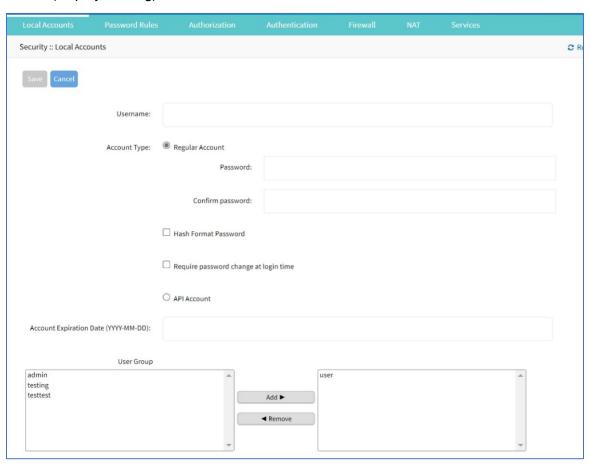

NOTE: Regardless of activation options, users can change their passwords at any time.

Manage Local Users

Add Local User

WebUI Procedure

- 1. Go to Security :: Local Accounts.
- 2. Click Add (displays dialog).

- 3. Enter Username.
- 4. In Account Type menu, select one.

Regular Account radio button

Enter Password and Confirm Password.

If the password is in a hash format, select **Hash Format Password** checkbox.

(as needed) Select Require password change at login time checkbox.

API Account radio button

On the **API Key**, follow this instruction: "Copy and store the API Key as it will not be possible to recover it after clicking on Save button."

- 5. (optional) Enter Account Expiration Date (YYYY-MM-DD).
- 6. (optional) In the *User Group*:

Select from left-side panel, click **Add**▶ to move to right-side panel.

To remove from right-side panel, select, and click **∢Remove**.

7. Click Save.

Edit Local User

WebUI Procedure

- 1. Go to Security :: Local Accounts.
- 2. Locate and select checkbox next to username.
- 3. Click Edit (displays dialog).
- 4. Make changes as needed.
- 5. Click Save.

Delete Local User

WebUI Procedure

- 1. Go to Security :: Local Accounts.
- 2. Locate and select checkbox next to username.
- Click **Delete** dialog.

4. On the confirmation dialog, click **OK**.

Lock/Unlock Local User

WebUI Procedure

Generally, the administrator can lock a user out of the device.

1. Go to Security :: Local Accounts.

- Locate and select checkbox next to username.
- 3. Click one:

Lock (locks user out of device).

Unlock (administrator allows user access)

There is a function whereby the user is authorized by an external authentication provider (LDAP, AD, or TACACS+) and the Local user account is locked. The user can authenticate with the sshkey, but permissions are enforced based on his group permissions with the external authentication provider.

Hash Format Password

As needed, the administrator can use a hash format password, rather than plain password. This can be used for scripts (avoids requiring scripts to use actual user passwords). The hash password must be generated separately beforehand. Use a hash password generator. These applications (OpenSSL, chpasswd, mkpasswd) use MD5, SHA256, SHA512 engines.

Hash Format

CLI Procedure

The Nodegrid Platform has an OpenSSL version. In the Console, use this:

```
root@nodegrid:~# openssl passwd -1 -salt mysall
Password:
$1$mysall$YBFr9On0wjde5be32mC1g1
```

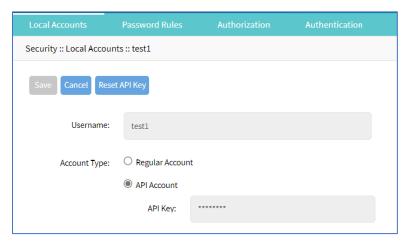

Generate a new API key for a user

In the *Type* column, the user must have a value of **API**.

WebUI Procedure

- 1. Go to Security :: Local Accounts.
- 2. Locate and click the user's name Type column must be API (displays dialog).

Alternatively, select checkbox and click Edit.

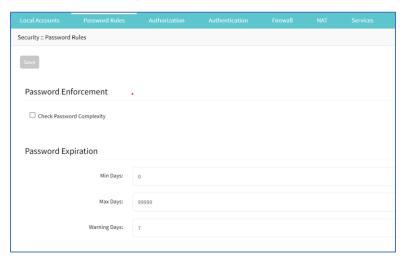

3. Click Generate API Key.

The new key is displayed in the API Key field. Copy the key and save in a secure location.

4. Click Save.

Password Rules tab

When password rules are configured for the Nodegrid Platform, all local user accounts are subject. The administrator can set password complexity as well as password expiration.

Manage Password Rules

Modify Password Rules

WebUI Procedure

- 1. Go to Security :: Password Rules.
- 2. In Password Enforcement menu:

Select Check Password Complexity checkbox (expands options).

Enter **Minimum Number of Digits** (minimum characters in password).

Enter **Minimum Number of Upper Case Characters** (minimum upper case characters in password).

Enter Minimum Number of Special Characters (minimum special characters in password).

Enter **Minimum Size**. (minimum characters in password – default: 8).

Enter **Number of Passwords to Store in History** (Number of passwords stored in history to prevent reuse – default: 1).

3. In Password Expiration menu:

Enter Min Days (minimum days password must be valid before changed – default: 0).

Enter Max Days (maximum days password is valid before forcing change – default: 99999).

Enter Warning Days (days that users is notified before expiration – default: 7).

4. Click Save.

Authorization tab

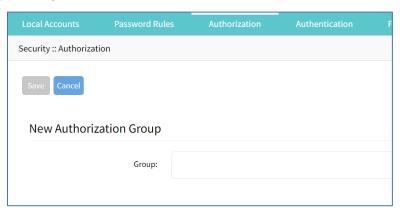

User groups combine multiple local and remote users into a single local group. Members are assigned group-specific roles/permissions. Members have access to devices assigned to that group. Groups which are authenticated against an external authentication provider are mapped to local groups. When a user is assigned to a group, that user received the combined access rights. Administrators can add and delete groups, as well as change permissions. On the device's original configuration, two default groups are available: Admin and Users. The Admin group grants full system and target access.

Configure a User Group

Step 1 - Create a User Group

WebUI Procedure

- 1. Go to Security :: Authorization.
- Click Add (displays dialog).

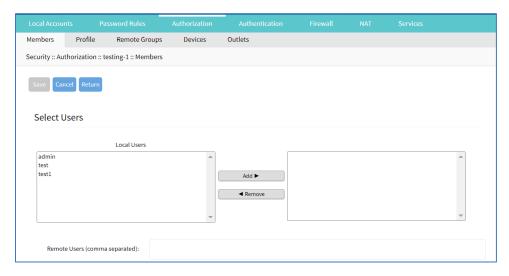

- 3. Enter Group Name.
- 4. Click Save.

Step 2 – Add Local Users to a Group

- 1. Go to Security :: Authorization.
- 2. Click the Group Name.
- 3. On **Members** sub-tab, click **Add** (displays dialog).

4. In the Local Users (left) panel:

Select from left-side panel, click **Add**▶ to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

5. Click Save.

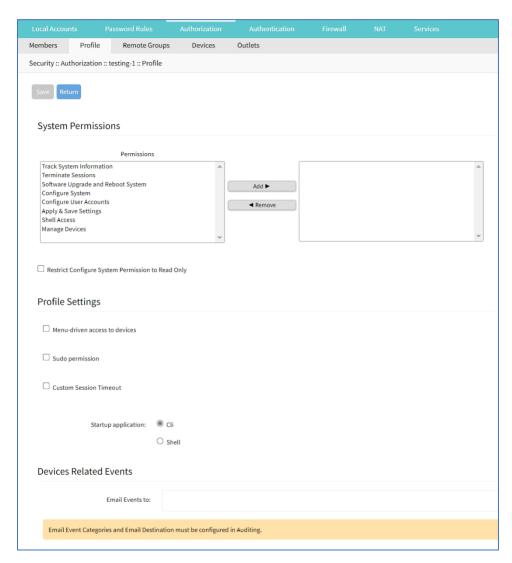

Step 3 – Assign Group System Permissions and Settings

Permissions include:

- Track System Information (access tracking information).
- Terminate Sessions (terminate user and device sessions).
- Software Upgrade and Reboot System (perform system upgrades and reboots).
- Configure System (admin rights to change system configuration).
- Configure User Account (change the Authorization setting).
- Apply & Save Settings (save changed settings).
- Shell Access (access to the system shell).

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name.
- 3. Click on the Profile sub-tab:

In System Permissions menu:

Select from left-side panel, click **Add** ► to move to right-side panel.

To remove from right-side panel, select, and click **∢Remove**.

Select **Restrict Configure System Permission to Read Only** checkbox (granted system settings are visible but cannot be changed)

In Profile Settings menu:

Select **Menu-driven access to devices** checkbox (group members presented a target menu when SSH connection to the Nodegrid device is established).

Select **Sudo permission** checkbox (users can execute sudo commands).

Select **Custom Session Timeout** checkbox (enables a custom session time).

Enter Timeout [seconds].

In Startup application menu, select one (Cli, Shell).

In Devices Related Events menu:

On **Email Events to**, enter email addresses (comma-separated).

NOTE: *Email Event Categories* and *Email Destination* are configured in the *Auditing* section.

4. Click Save.

Step 4 – Assign external groups

External groups must be assigned to a local group. This ensures the remote group gets the correct permissions.

NOTE: This step is required for LDAP, AD, and Kerberos groups. Radius and Tacacs+ authentication providers use other methods to link external groups/users to local groups.

WebUI Procedure

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name,
- 3. On the Remote Groups sub-tab:

In Remote Group Names, list external group names (comma-separated).

4. Click Save.

Step 5 – Assign device permissions

Depending on system permission, access to specific devices can be assigned to groups. Devices must be added to the group. Appropriate access rights can be set. Multiple devices can be added at the same time.

NOTE: Access permissions to control power outlets are granted through the Outlets permissions and not through Devices

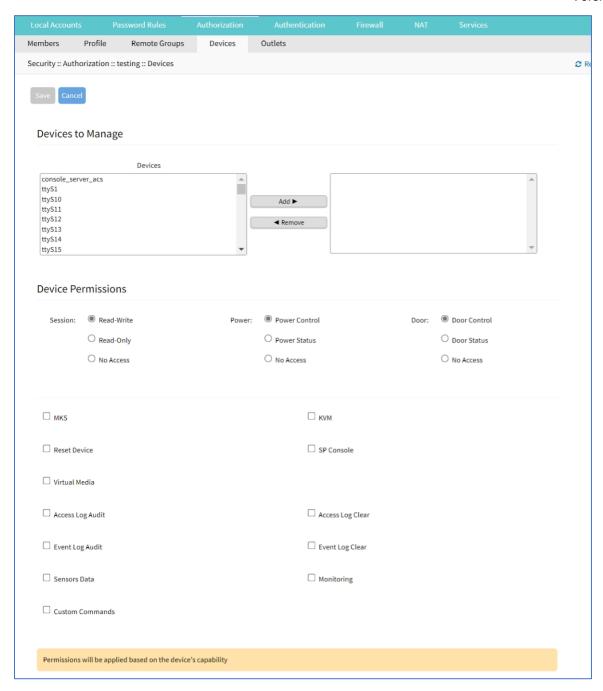

WebUI Procedure

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name.
- 3. Click on the **Devices** sub-tab.

4. Click **Add** (displays dialog).

5. In Devices to Manage menu:

On *Devices* panel:

Select from left-side panel, click **Add** ► to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

In Device Permissions menu:

In Sessions menu, select one (Read-Write, Read-Only, No Access).

In Power menu, select one (Power Control, Power Status, No Access).

In *Door* menu, select one (**Door Control**, **Door Status**, **No Access**)

6. (as needed) Select/unselect the following settings:

MKS (access to MKS sessions).

KVM (access to KVM sessions).

Reset Device (permission to reset a device session).

SP Console (access to IPMI console sessions - serial over LAN).

Virtual Media (access to start a Virtual Media session to an IPMI device).

Access Log Audit (access to read the access log of an IPMI device).

Access Log Clear (permission to clear the access log of an IPMI device).

Event Log Audit (permission to read the device-specific event log).

Event Log Clear (permission to clear the device-specific Event Log).

Sensors Data (permission to access monitoring features).

Monitoring (permission to read sensor data).

Custom Commands (permission to execute custom commands).

7. Click Save.

Edit Device in Group

WebUI Procedure

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name.
- 3. Click on the **Devices** sub-tab.
- 4. In the **Name** column, click on the device name.

Alternatively, select checkbox and click Edit.

- 5. Make changes as needed.
- 6. Click Save.

Delete Device from Group

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name.
- 3. Click on the **Devices** sub-tab.
- 4. Select checkbox and click **Delete**.

Assign Power Outlet Permissions

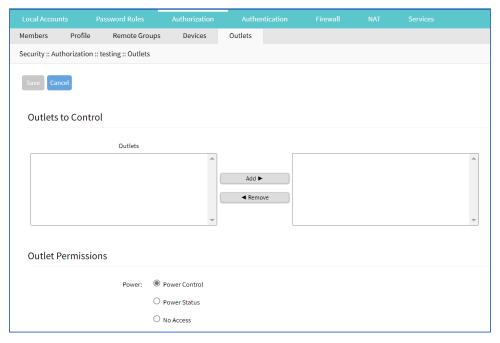

Access permissions for power outlets from Rack PDUs are controlled individually as the power to turn on or off a device can have severe consequences for the running of a data center or remote location. The assignment of permissions is analogous to device's access permissions.

WebUI Procedure

- 1. Go to Security :: Authorization.
- 2. Click on the Group Name.
- 3. Click Outlets sub-tab.

4. Click Add (displays dialog).

5. In Outlets to Control menu:

In Outlets panel:

Select from left-side panel, click **Add** ▶ to move to right-side panel.

To remove from right-side panel, select, and click **◄Remove**.

6. In *Outlet Permissions* menu, select one:

Power Control radio button (permission to turn on or off an outlet)

Power Status radio button (permission to see the current outlet status)

No Access radio button (no access to outlet)

7. Click Save.

Configure SSH Key Authentication

The Nodegrid platform allows use of SSH keys for authorization. The feature is often used to allow automation systems to gain secure access without a password. It works well with direct Shell access and users who want to use SSH keys for a local home directory. This feature is available for all local, LDAP, AD, and Tacacs+ users. Radius users cannot use SSH keys for authentication.

Setup SSH Key Authorization

WebUI Procedure

- 1. Go to Security :: Authorization.
- 2. In the Group column, click on a name.
- 3. On the **Profile** sub-tab:

In Startup application menu:

Select **Shell** radio button (gives group members default shell access, and not CLI access, on connection via SSH).

- 4. Go to Security :: Local Accounts.
- 5. Create a local user and add to the new group.

The SSH key can be used for authentication. The default SSH tools can copy the SSH key to the Nodegrid device (i.e., SSH-copy-id).

NOTE: If the user needs default CLI access, and not Shell access, remove the user from the newly created Group.

Authentication tab

Authentication validates the user, usually with credentials that, most often, take the form of a username and password. Authorization is an essential security feature that complements authentication. Once authenticated with credentials, authorization determines access (i.e., directories, functions, features, and displays).

Nodegrid devices have a built-in admin user account named 'admin'. This has full access and rights to all configurable unit functions: network, security, authentication, authorization, managed devices, including other users. The admin account cannot be deleted (initial default password: admin).

NOTE: For security reasons, during the first login, administrators are immediately required to change the default password. Use the Change Password option on the pull-down menu under the username (upper right corner of the WebUI).

Authentication of local users and groups is fully supported, as well as external users and groups. External authentication of users and groups can be done through LDAP/AD, Tacacs+, Radius and Kerberos.

By default, all users have access to enabled managed devices. Based on assigned groups, users have limited access to Nodegrid Web portal management attributes. User privileges can be modified with profile and access rights in an authorization group.

A user in the Admin group has the same administrative privileges as the initial admin user. Each user must have a specific user account on a Nodegrid device. An external authentication server can provide authenticated access. A user can be assigned to one or more authorization groups.

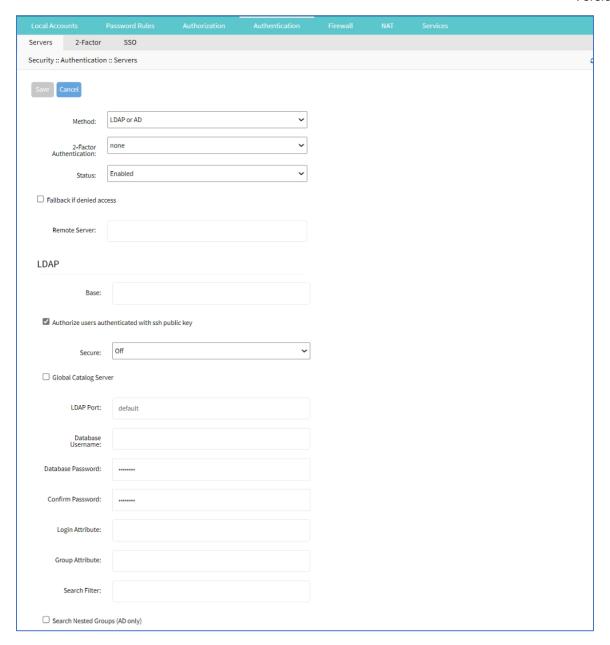

NOTE: The device's root user and Admin group users can still bypass 2-Factor Authentication in Console and WebUI, in case the remote server is unreachable.

Servers sub-tab

Add a server

- 1. Go to Security :: Authentication :: Servers.
- 2. Click Add (displays dialog).

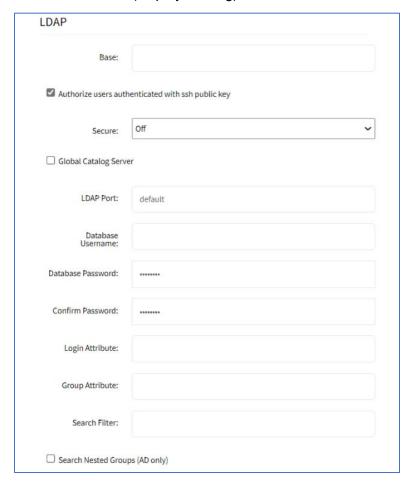

- On Method drop-down, select one (LDAP or AD, RADIUS, TACACS+, Kerberos). (Additional options display, depending on selection).
- 4. On 2 Factor Authentication drop-down, select one (None, Enabled).
- 5. On Status drop-down, select one (Enabled, Disabled).
- 6. Select Fallback if denied access checkbox.
- 7. Enter Remote Server (IP address of remote server).

8. If **Method** selection is: **LDAP or AD** (displays dialog).

Enter **Base** (root DN or a sublevel DN – highest point used to search for users or groups).

Select Authorize users authenticated with ssh public key checkbox (default: disabled).

On Secure drop-down, select one (On, Off, Start_TLS) (default: Off).

Select **Global Catalog Server** checkbox (if enabled, uses an Active Directory Global Catalog Server).

Enter LDAP Port (or accept "default").

Enter Database Username.

Enter Database Password.

Enter Confirm Password.

Enter Login Attribute (contains username - for AD, default: sAMAccountName).

Enter **Group Attribute** (group identifier - for AD, default: memberOf).

Enter Search Filter.

Select Search Nested Groups (AD only) checkbox (default: disabled).

Enter Group Base.

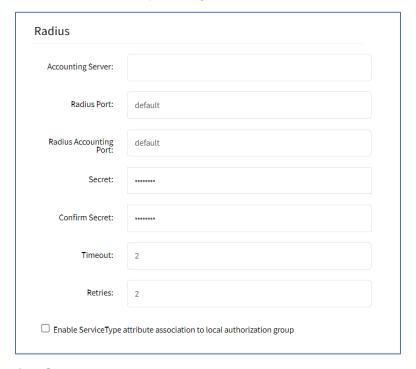

Example: OpenLDAP Configuration

Status: True; Fallback if denied access: True; Remote Server: 192.168.1.1; Base: dc=zpe, dc=net; Secure: Off; Global Catalog Server: False; Database Username: cn=admin, dc=zpe, dc=net; Login Attribute: cn; Group Attribute: Member, UID

Example: Active Directory Configuration

Status: True; Fallback if denied access: True; Remote Server: 192.168.1.1; Base: dc=zpesystems, dc=com; Secure: Start TLSI; Global Catalog Server: True; Database Username: cn=Administrator, cn=Users, dc=zpesystems, dc=com; Login Attribute: sAMAccountName; Group Attribute: memberOf

9. If **Method** selection is: **RADIUS** (displays dialog).

Enter Accounting Server.

Enter Radius Port (or accept "default").

Enter Radius Accounting Port (or accept "default").

Enter Secret and Confirm Secret.

Enter Timeout.

Enter Retries.

Select Enable ServiceType attribute association to local authorization group checkbox (allows assignment of Radius Service Types to Nodegrid local groups).

+++++++++++++++

FreeRadius Server Configuration - CLI Procedure (example)

1. Create the file "/usr/share/freeradius/dictionary.zpe" with the content listed below:

```
VENDOR ZPE 42518
BEGIN-VENDOR ZPE
ATTRIBUTE ZPE-User-Groups 1 string
END-VENDOR ZPE
```

2. Edit the file "/usr/share/freeradius/dictionary". In the file, add a line with dictionary.zpe (suggested location).

```
$INCLUDE dictionary.zpe
$INCLUDE dictionary.jradius
```

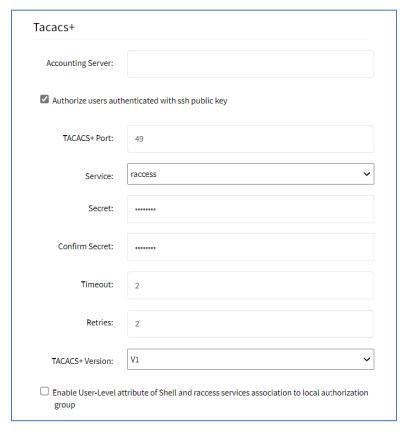

3. In /etc/freeradius/users, assign user groups. Define the "Framed-Filter-ID" attribute (as before) or define a new attribute "ZPE-User-Groups".

NOTE: If both attributes are defined, "ZPE-User-Groups" takes precedence.

+++++++++++++++

10. If **Method** selection is: **TACACS+** (displays dialog).

Enter TACACS+ Port (default: 49).

On Service drop-down, select one (PPP, Shell, raccess) (default: raccess).

Enter **Secret**.

Enter Confirm Secret.

Enter Timeout.

Enter Retries.

On TACACS+ Version drop-down, select one (V0, V1, V0_V1, V1_V0).

Select Enable User-Level attribute of Shell and raccess services association to local authorization group checkbox.

11. If **Method** selection is: **Kerberos** (displays dialog).

Enter Realm Domain Name.

Enter Domain Name.

12. Click Save.

Edit a Server

WebUI Procedure

- 1. Go to Security :: Authentication :: Servers.
- 2. In Index column, click the index to be updated (displays dialog).
- 3. Make changes, as needed.
- 4. Click Save.

Delete a Server

WebUI Procedure

- 1. Go to Security :: Authentication :: Servers.
- 2. Locate and select checkbox).
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

Move Index Up/Down

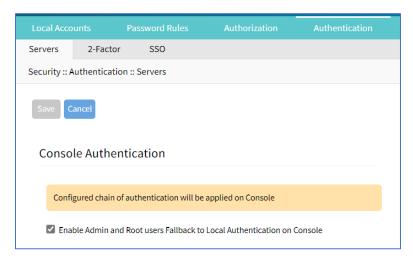

WebUI Procedure

- 1. Go to Security :: Authentication :: Servers.
- 2. Locate and select checkbox.
- 3. Click **Up** to move the selection up in the table.
- 4. Click **Down** to move the selection down in the table.
- 5. Click Save.

Enable/disable Console Authentication

- 1. Go to Security :: Authentication :: Servers.
- 2. Locate and select checkbox).
- 3. Click Console (displays dialog).

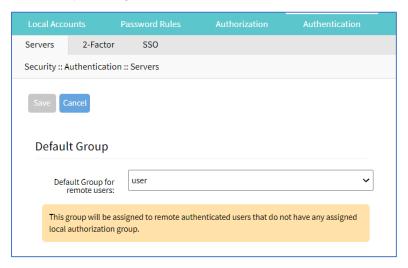

- 4. (as needed) Select/unselect Enable Admin and Root users Fallback to Local Authentication on Console checkbox.
- 5. Click Save.

Display Console

WebUI Procedure

- 1. Go to Security :: Authentication :: Servers.
- 2. Locate and select checkbox).
- 3. Click **Default Group** (displays dialog).

- 4. On the **Default Group for Remote Server** drop-down, select one.
- 5. Click Save.

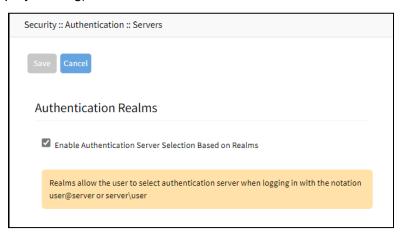

Set Realms

Realms allow the user to select authentication server when logging in with the notation user@server or server\user

WebUI Procedure

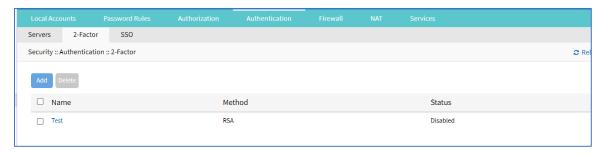

- 1. Go to Security :: Authentication :: Servers.
- 2. Locate and select checkbox.
- 3. Click **Realms** (displays dialog).

4. Click Save.

2-Factor sub-tab

This sets up 2-factor authentication.

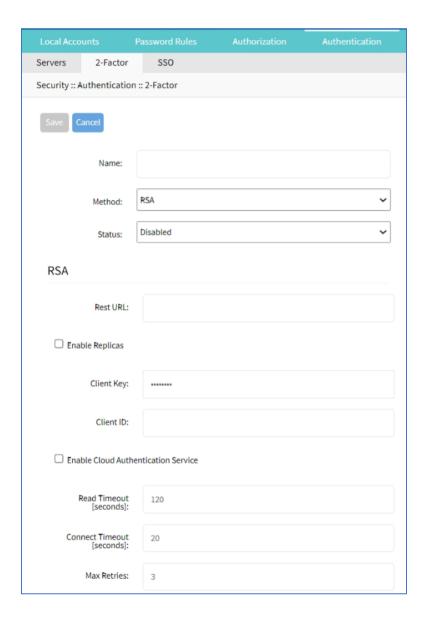

Add 2-Factor Configuration

WebUI Procedure

- 1. Go to Security :: Authentication :: 2-Factor.
- 2. Click Add (displays dialog)

- 3. Enter Name.
- 4. On **Method** drop-down, select one (**RSA**).
- 5. On Status drop-down, select one (Enabled, Disabled).
- 6. In RSA menu:

Enter Rest URL.

Select Enable Replicas checkbox.

Enter Client Key.

Enter Client ID.

Select Enable Cloud Authentication Service checkbox.

Enter Read Timeout [seconds] (default: 120).

Enter Connect Timeout [seconds] (default: 20).

Enter Max Retries.

7. Click Save.

Configure RSA SecurID (2-Factor)

Step 1 – Add SecurID (WebUI Procedure)

- 1. Go to Security :: Authentication :: 2-Factor.
- 2. Click **Add** (displays dialog)
- 3. Enter **Name** (name to identify the SecurID system, i.e., SecurID)
- 4. Enter **Rest URL** (URL to access the SecurID Authentication API format: https://:5555/mfa/v1_1/authn)
- 5. Select **Enable Replicas** (Rest Service URL to failover to the server (up to 15 replicas). One per line).

Client Key (available through RSA Security Console. Copy/paste the **Access Key** from *SecurID Security Console*. The Access Key is also available at RSA SecurID Authentication API (under System Settings)

Client ID (retrieve the Server Node name from the Authentication Manager Contact List.)

6. Select Enable Cloud Authentication Service checkbox (if enabled, two required fields display).

Policy ID (access policy name configured in the Cloud Administration Console. Obtain this name from your Cloud Authentication Service Super Admin)

Tenant ID (Tenant Id name created in the Cloud Administration Console. Obtain this name from your Cloud Authentication Service Super Admin)

7. Click Save.

Step 2 – Set Certificate to access SecurID Server (WebUI Procedure

1. If RSA server is through Cloud Authentication:

Go to RSA SecurID Access and click the Lock icon (next to URL).

Locate and click on the Certificate.

On the pop-up dialog, click on the first/top certificate, and drag it to your desktop.

Upload certificate to Nodegrid (certificate is automatically converted to the expected format).

2. If not via Cloud:

Go the RSA Operations Console

Download the Signing Root Certificate.

Go to Security :: Authentication :: 2-Factor.

Click the link representing the SecurID server (added above).

Click Certificate.

Select Local Computer checkbox.

Click Choose File and select the file (i.e. RootCA.cer file).

Click Apply,

Click Save.

Edit 2-Factor Configuration

WebUI Procedure

- 1. Go to Security :: Authentication :: 2-Factor.
- 2. In *Name* column, click the name to be updated (displays dialog).
- 3. Make changes, as needed.
- 4. Click Save.

Delete 2-Factor Configuration

WebUI Procedure

- 1. Go to Security :: Authentication :: 2-Factor.
- 2. Locate and select checkbox.
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

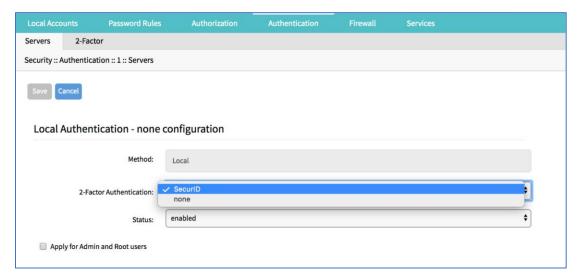

Assign 2-factor to an Authentication Method

RSA SecurID 2-factor authentication can be added to any of the Nodegrid-supported authentication methods: Local, LDAP/AD, Radius, Tacacs+, or Kerberos.

Nodegrid authenticates users following the order of the authentication servers, as configured. When a method succeeds (user authenticated), Nodegrid initiates the 2-factor authentication (if configured).

The user receives a request from RSA SecurID to provide the token code and PIN (according to the setup on the user's RSA Security Console). The process is applied on user login via Web Browser, SSH, Telnet or Console port.

NOTE: For Local authentication method, 2-factor can be enforced or skipped. This allows local Nodegrid administrators to login without needing to configure counterpart users in the RSA Security Console.

RSA Authenticate App

This applies only to Cloud Authentication Services.

- 1. Download the RSA SecurID Authenticate app.
- Go to RSA SecurID Access and login.
- 3. Follow the steps to register the device.

SSO sub-tab

With Single Sign-On (SSO), users authenticate once to gain access to multiple secured systems without resubmitting credentials. Nodegrid currently supports multiple service providers.

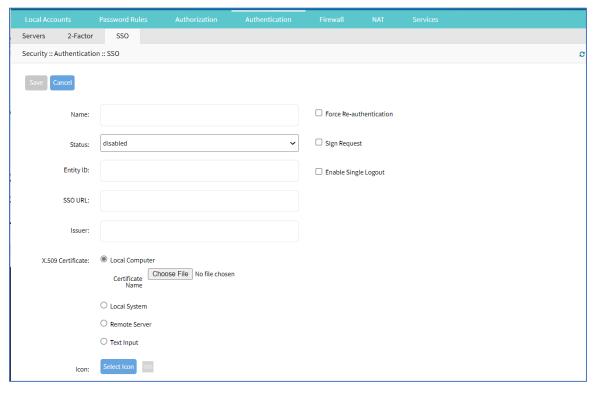

Add SSO

WebUI Procedure

1. Go to Security :: Authentication :: SSO.

2. Click Add (displays dialog).

- 3. .Enter Name.
- 4. On Status drop-down, select one (Enabled, Disabled).
- 5. Enter **Entity ID** (globally unique name).
- 6. Enter SSO URL.
- 7. Enter Issuer.
- 8. In X-509 Certificate menu, select one:

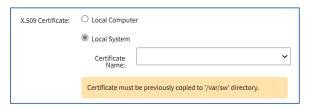

Local Computer radio button.

Click Choose File.

Locate and select file.

Local System radio button.

On Certificate Name drop-down, select one.

Remote Server radio button.

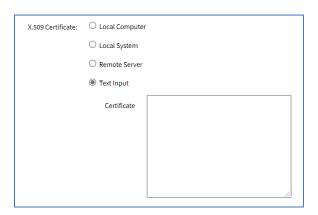

Enter URL.

Enter Username.

Enter Password.

(as needed) Select The path in url to be used as absolute path name checkbox.

Text Input radio button.

In Certificate text box, enter details.

- 9. Select Force Re-authentication checkbox.
- 10. Select **Sign Request** checkbox.
- 11. Select Enable Single Logout checkbox. Enter Logout URL.

12. (optional) In Icon, click Select Icon. Click on a logo to set as 2-Factor icon.

13. Click Save.

The following fields are required to configure a successful SAML flow for each Identity Provider:

SAML Requirements

Identity Provider (Idp)	Copy Fields from Nodegrid to IdP	Paste Fields from IDP to Nodegrid
Duo	Login URL Entity ID	SSO URL Entity ID Download Certificate
Okta	Single Sign On URL Audience URI (SP Entity ID)	Identity Provider SSO URL Identity Provider Issuer X.509 Certificate
G Suite	ACS URL Entity ID	SSO URL Entity ID Certificate
Ping	Entity ID ACS URL	Issuer Idpid NOTE: The idpid from Ping is used as the SSO URL field in Nodegrid: https://sso.connect.pingidentity.com/sso/idp/SSO.saml2?idpid= + the idpid
ADFS	Entity ID (maps to Relying party trust identifier) ACS URL (maps to Trusted URL)	Entity ID (maps to Issuer on Nodegrid)

IdP configuration fields:

Entity ID (globally unique name for the SP URL)

ACS URL (Assertion Consumer Service URL in which the Identity Provider redirects the user and sends the SAML assertion after its authentication process.)

Attributes (attributes that IdP sends back with the SAML assertion. SP can have more than one attribute, nameID is the most common.)

SAML Signature Algorithm (either SHA-1 or SHA-256. Used with X.509 certificate. Default: SHA-256.)

SP configuration fields:

X.509 Certificate (certificate provided by the IdP to allow the SP to verify that the SAML assertion is from the IdP)

Issuer URL/Entity ID (unique identifier of the IdP)

Single Sign On URL (IdP endpoint that starts the authentication process)

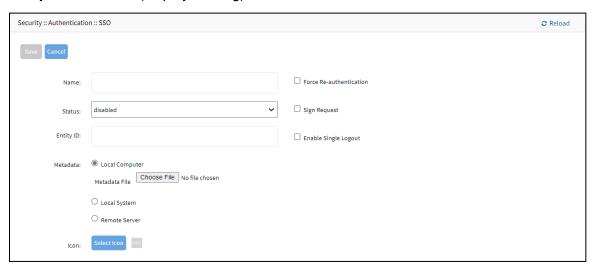

RelayState: (optional) (deep linking for SAML for <ip>/direct/<device>/console)

For more information on SSO, please see https://support.zpesystems.com/portal/kb/articles/single-sign-on-sso

Import Metadata

WebUI Procedure

- 1. Go to Security :: Authentication :: SSO.
- Click Import Metadata (displays dialog).

- Enter Name.
- 4. On Status drop-down, select one (Enabled, Disabled).
- 5. Enter Entity ID (globally unique name).
- 6. In Metadata menu, select one:

Local Computer radio button.

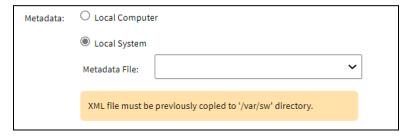

Click Choose File.

Locate and select file.

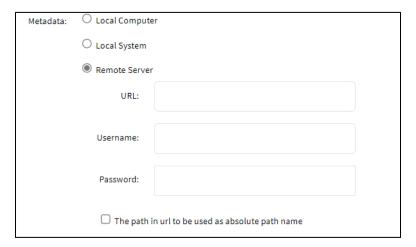

Local System radio button.

On Metadata File drop-down, select one.

Remote Server radio button.

Enter URL.

Enter Username.

Enter Password.

(as needed) Select The path in url to be used as absolute path name checkbox.

7. (optional) In Icon, click Select Icon. Click on a logo to set as 2-Factor icon.

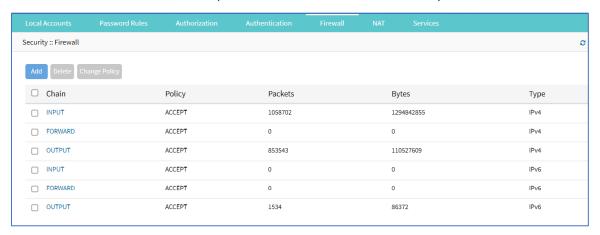

- 8. Select Force Re-authentication checkbox.
- 9. Select Sign Request checkbox.
- 10. Select Enable Single Logout checkbox.
- 11. Click Save.

Firewall tab

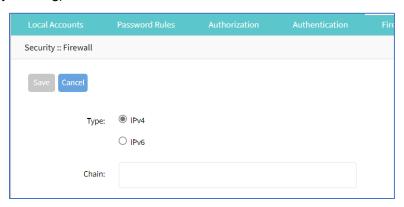

When configured, the Nodegrid device functions as a Firewall. There are six built-in default chains (three for IPv4, three for IPv6). These accept packets (Output, Input, and Forward). As needed, additional user chains can be created. (Default chains cannot be deleted.)

Add a Chain

WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. Click Add (displays dialog).

3. For Type, select one

IPv4 radio button

IPv6 radio button

- 4. Enter Chain (name of this chain).
- 5. Click Save.

Delete a Chain

WebUI Procedure

1. Go to Security :: Firewall.

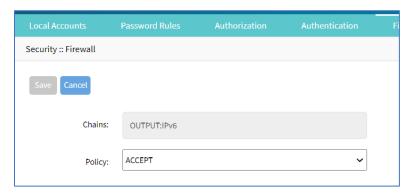

- Select checkbox next to name to be deleted.
- 3. Click Delete.
- 4. On confirmation pop-up dialog, click **OK**.

Change Chain Policy

WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. In the Chain column, locate and click the name (displays dialog).

- 3. On Policy drop-down, select one (ACCEPT, DROP).
- 4. Click Save.

Manage a Chain

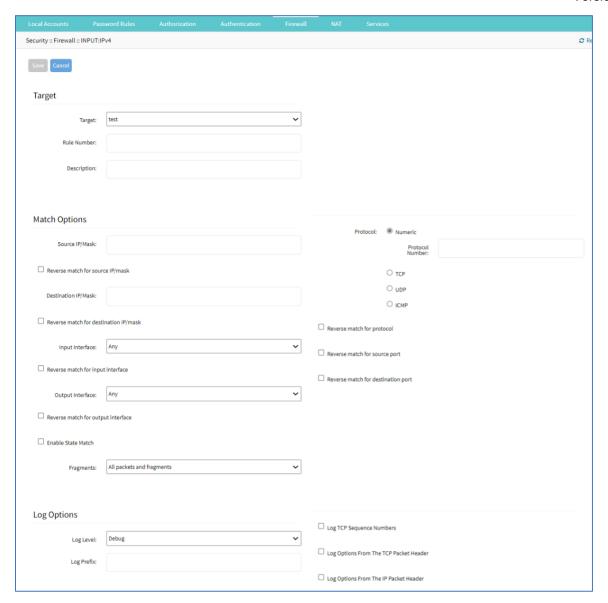

To manage chain functions/settings, click on the name in the *Chain* column (displays dialog).

Add - WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. In the Chain column, locate and click on the name (displays dialog).
- 3. Click Add (displays dialog).

4. In Target menu:

In Target drop-down, select one (ACCEPT, DROP, REJECT, LOG, RETURN).

Enter Rule Number.

Enter **Description**.

If **REJECT** selected, *Reject Options* menu displays:

In Reject With drop-down, select one (Network Unreachable, Host Unreachable, Port Unreachable, Protocol Unreachable, Network Prohibited, Host Prohibited, Administratively Prohibited, TCP Reset).

5. In Match Options menu:

Enter Source IP/Mask.

Select Reverse match for source IP/mask checkbox.

Enter Destination IP/Mask.

Select Reverse match for destination IP/mask checkbox.

On Input Interface drop-down, select one (Any, Io, eth0, eth1).

Select Reverse match for input interface checkbox.

On Output Interface drop-down, select one (Any, Io, eth0, eth1).

Select Reverse match for output interface checkbox.

Select Enable State Match checkbox (displays options – one or more can be selected):

NEW checkbox.

ESTABLISHED checkbox.

RELATED checkbox.

INVALID checkbox.

Reverse state match checkbox

On Fragments drop-down, select one (All packets and fragments, Unfragmented packets and 1st packets, 2nd and further packets).

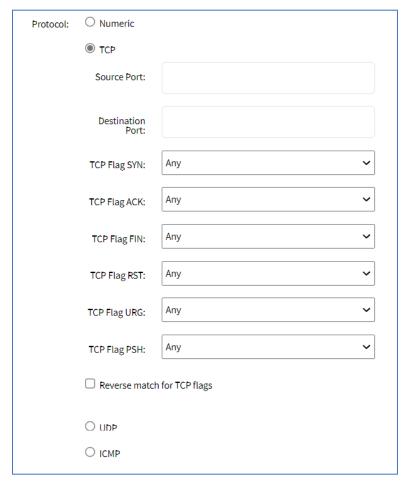

In *Protocol* menu, select one:

Numeric radio button. Enter Protocol Number.

TCP radio button

Enter Source Port.

Enter **Destination Port**.

On TCP Flag SYN drop-down, select one (Any, Set, Unset).

On TCP Flag ACK drop-down, select one (Any, Set, Unset).

On TCP Flag FIN drop-down, select one (Any, Set, Unset).

On TCP Flag RST drop-down, select one (Any, Set, Unset).

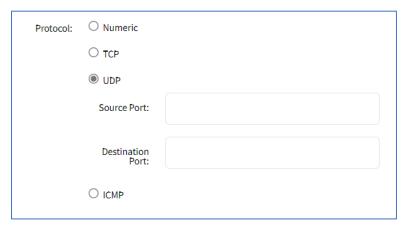

On TCP Flag URG drop-down, select one (Any, Set, Unset).

On TCP Flag PSH drop-down, select one (Any, Set, Unset).

Select Reverse Match for TCP Flags checkbox.

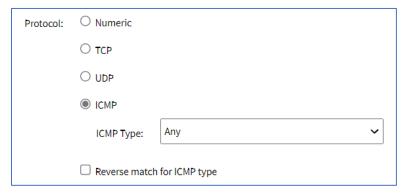

UDP radio button. Enter **Source Port**. Enter **Destination Port**.

Enter Source Port.

Enter **Destination Port**.

ICMP radio button.

On ICMP Type drop-down, select one (Any, Echo Reply, Destination Unreachable, Network Unreachable, Host Unreachable, Protocol Unreachable, Port Unreachable, Fragmentation Needed, Source Route Failed, Network Unknown, Host Unknown, Network Prohibited, Host Prohibited, TOS Network Unreachable, TOS Host Unreachable, Communication Prohibited, Host Precedence Violation, Precedence Cutoff, Source Quench, Redirect, Network Redirect, Host Redirect, TOS Network Redirect, TOS Host Redirect, Echo Request, Router Advertisement, Router Solicitation, Time Exceeded, TTL Zero During Transit, TTL Zero During Reassembly, Parameter Problem, Bad IP Header, Required Option Missing, Timestamp Request, Timestamp Reply, Address Mask Request, Address Mask Reply)

Select Reverse match for ICMP type checkbox.

Select **Reverse match for protocol** checkbox.

Select Reverse match for source port checkbox.

Select Reverse match for destination port checkbox.

6. In Log Options menu:

On Log Level drop-down, select one (Debug, Info, Notice, Warning, Error, Critical, Alert, Emergency).

Enter Log Prefix.

Select **Log TCP Sequence Numbers** checkbox.

Select Log Options from the TCP Packet Header checkbox.

Select Log Options from the IP Packet Header checkbox.

7. Click Save.

Edit - WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. In the Chain column, locate and click on the checkbox.
- 3. Click Edit (displays dialog).
- 4. Make changes, as needed.
- 5. Click Save.

Delete - WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. In the Chain column, locate and select checkbox on the name.
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

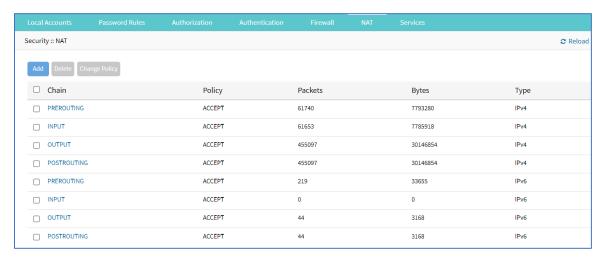

Move Up/Down - WebUI Procedure

- 1. Go to Security :: Firewall.
- 2. In the *Chain* column, locate and select checkbox on the name.
- 3. Click **Up** to move up.
- 4. Click **Down** to move down.

NAT tab

There are eight built-in default chains (cannot be deleted): IPv4 with four, IPv6 with four. These accept Pre-routing, Output, Input, and Post-routing packets. Rules can be created for each chain.

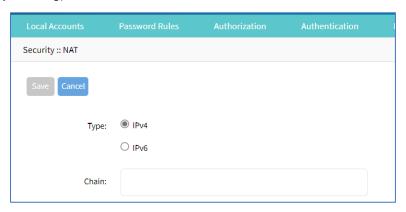

Add a Chain

WebUI Procedure

- 1. Go to Security :: NAT.
- 2. Click Add (displays dialog).

3. For Type, select one

IPv4 radio button

IPv6 radio button

- 4. Enter Chain (name of this chain).
- 5. Click Save.

Delete a Chain

WebUI Procedure

- 1. Go to Security :: NAT.
- 2. Select checkbox next to name to be deleted.
- 3. Click Delete.
- 4. On confirmation pop-up dialog, click **OK**.

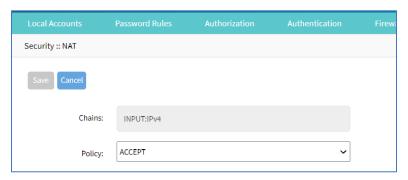

©2022 ZPE Systems, Inc.

Change Chain Policy

WebUI Procedure

- 1. Go to Security :: NAT.
- 2. In the Chain column, locate and click the name (displays dialog).

- 3. On Policy drop-down, select one (ACCEPT, DROP).
- 4. Click Save.

Manage a Chain

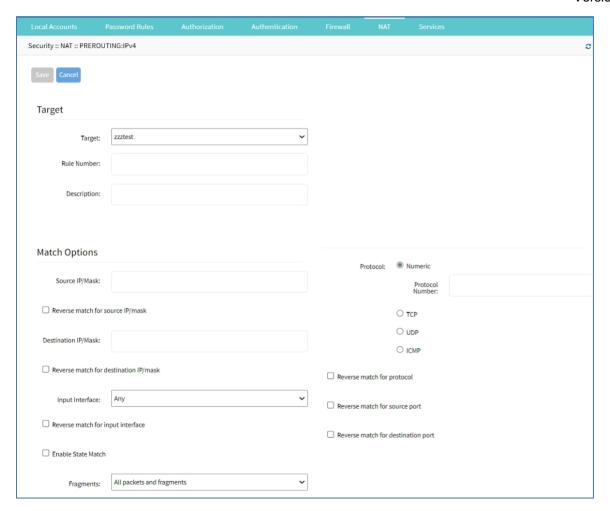

To manage chain functions/settings, click on the name in the Chain column (displays dialog).

Add - WebUI Procedure

- 1. Go to Security :: NAT.
- 2. In the Chain column, locate and click on the name (displays dialog).
- 3. Click Add (displays dialog).

4. In *Target* menu:

In Target drop-down, select one (ACCEPT, DNAT, REDIRECT, LOG, RETURN).

Enter Rule Number.

Enter **Description**.

5. In Match Options menu:

Enter Source IP/Mask.

Select Reverse match for source IP/mask checkbox.

Enter Destination IP/Mask.

Select Reverse match for destination IP/mask checkbox.

On Input Interface drop-down, select one (Any, Io, eth0, eth1).

Select Reverse match for input interface checkbox.

Select **Enable State Match** checkbox (displays options – one or more can be selected):

NEW checkbox.

ESTABLISHED checkbox.

RELATED checkbox.

INVALID checkbox.

SNAT checkbox.

DNAT checkbox.

Reverse state match checkbox

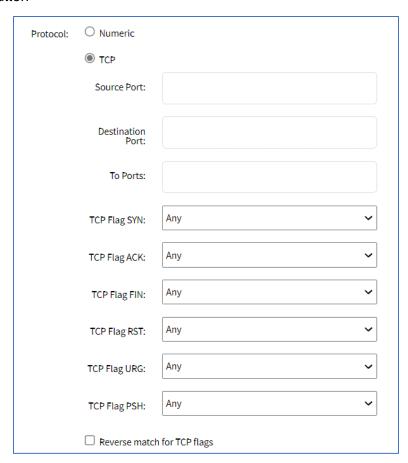

On Fragments drop-down, select one (All packets and fragments, Unfragmented packets and 1st packets, 2nd and further packets).

In Protocol menu, select one:

Numeric radio button. Enter Protocol Number.

TCP radio button

Enter Source Port.

Enter Destination Port.

Enter To Ports

On TCP Flag SYN drop-down, select one (Any, Set, Unset).

On TCP Flag ACK drop-down, select one (Any, Set, Unset).

On TCP Flag FIN drop-down, select one (Any, Set, Unset).

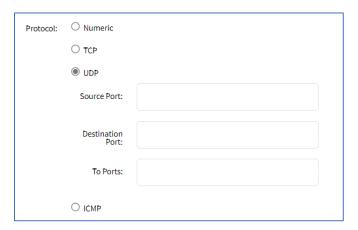

On TCP Flag RST drop-down, select one (Any, Set, Unset).

On TCP Flag URG drop-down, select one (Any, Set, Unset).

On TCP Flag PSH drop-down, select one (Any, Set, Unset).

Select Reverse Match for TCP Flags checkbox.

UDP radio button.

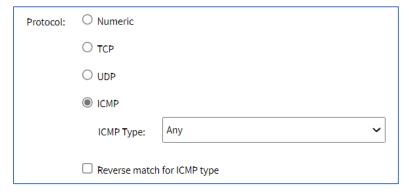

Enter Source Port.

Enter Destination Port.

Enter To Ports.

ICMP radio button

On ICMP Type drop-down, select one (

Select Reverse match for ICMP type checkbox.

Select Reverse match for protocol checkbox.

Select Reverse match for source port checkbox.

Select Reverse match for destination port checkbox.

6. Click Save.

Edit - WebUI Procedure

- 1. Go to Security :: NAT.
- 2. In the Chain column, locate and click on the checkbox.
- 3. Click Edit (displays dialog).
- Make changes, as needed.
- 5. Click Save.

Delete - WebUI Procedure

- 1. Go to Security :: NAT.
- 2. In the Chain column, locate and select checkbox on the name.
- 3. Click Delete.
- 4. On the confirmation pop-up dialog, click **OK**.

Move Up/Down - WebUI Procedure

- 1. Go to Security :: NAT.
- 2. In the Chain column, locate and select checkbox on the name.
- 3. Click **Up** to move up.
- 4. Click **Down** to move down.

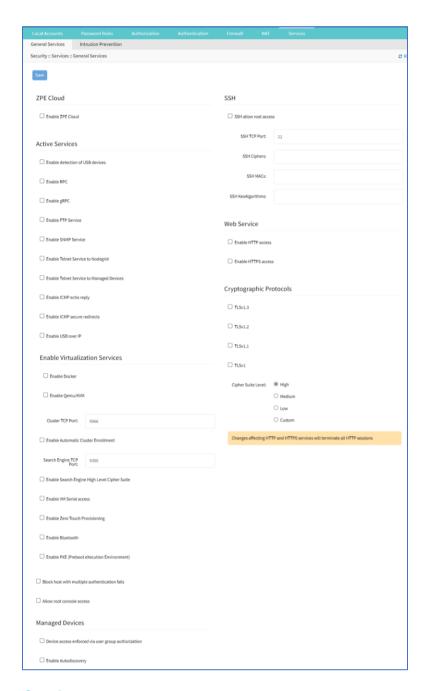

Services tab

The device's security level is configured here. This includes active service settings for ZPE Cloud, managed devices, intrusion prevention, SSH, web service settings, and cryptographic protocols.

General Services sub-tab

General security service settings are configured on this page. Because of this complexity, it is recommended to prepare a document that defines how the company security requirements are implemented with the device security settings.

Configure General Services

WebUI Procedure

- 1. Go to Security :: Services :: General Services.
- 2. In ZPE Cloud menu (cloud-based management platform for Nodegrid products):

Select **Enable ZPE Cloud** checkbox (Nodegrid NSR, GSR, BSR, LSR - default: enabled. Nodegrid Serial Console - default: disabled).

Confirm ZPE Cloud URL (read-only).

Select Enable Remote Access checkbox.

Select **Enable File Protection** checkbox (If enabled, file transfer requires authentication hash based on this password to validate file integrity and origin – default: disabled).

3. In Active Services menu (select all that apply):

Select Enable detection of USB devices checkbox.

Select Enable RPC checkbox.

Select Enable gRPC checkbox. Enter gRPC Port.

Select Enable FTP Service checkbox.

Select Enable SNMP Service checkbox (default: enabled).

Select Enable Telnet Service to Nodegrid checkbox. Enter Telnet TCP Port (default: 23).

Select Enable Telnet Service to Managed Devices checkbox.

Select Enable ICMP echo reply checkbox.

Select Enable ICMP secure redirects checkbox.

Select Enable USB over IP checkbox.

4. In Enable Virtualization Services menu (select all that apply):

Select Enable Docker checkbox.

Select Enable Qemu/KVM checkbox.

Enter Cluster TCP Port (default: 9966).

Select Enable Automatic Cluster Enrollment checkbox.

Enter Search Engine TCP Port (default: 9300).

Select Enable Search Engine High Level Cipher Suite checkbox.

Select Enable VM Serial access checkbox (default: enabled).

Enter VM Serial Port (default: 9977).

Enter vMotion timeout [seconds] (default: 300).

Select Enable Zero Touch Provisioning checkbox (default: enabled).

Select Enable Bluetooth checkbox. Enter Display name.

Select Enable PXE (Preboot eXecution Environment) checkbox (default: enabled).

Select Block host with multiple authentication fails checkbox.

Enter **Period Host will stay blocked (min)** (default: 10).

Enter Timeframe to monitor authentication fails (min) (default: 10).

Enter Number of authentication fails to block host (default: 5).

Enter Whitelisted IP Addresses (comma-separated).

Select Allow root console access checkbox.

5. In *Managed Devices* menu (select all that apply):

Select **Device access enforced via user group authorization** checkbox (If enabled, users can only access devices listed in user's authorization groups. If not enabled, all enrolled devices are available.).

Select **Enable Autodiscovery** checkbox.

Select **DHCP lease controlled by autodiscovery rules** checkbox (default: auto-selected)

6. In SSH menu:

Select **SSH** allow root access checkbox (default: enabled).

Enter SSH TCP Port (default: 22).

Enter **SSH Ciphers** (comma-separated) (default: blank).

Enter SSH MACs (comma-separated) (default: blank).

Enter **SSH KexAlgorithms** (comma-separated) (default: blank).

7. In Web Service menu:

Select Enable HTTP access checkbox (default: enabled).

Enter HTTP Port (default: 80).

Select Enable HTTPS access checkbox (default: enabled).

Enter HTTP Port (default: 443).

Select Redirect HTTP to HTTPS checkbox (default: enabled).

8. In Cryptographic Protocols menu:

Select TLSv1.3 checkbox (default: enabled).

Select **TLSv1.2** checkbox (default: enabled).

Select **TLSv1.1** checkbox (default: enabled).

Select **TLSv1** checkbox (default: disabled).

In Cipher Suite Level menu, select one:

High radio button.

Medium radio button (default).

Low radio button.

Custom radio button.

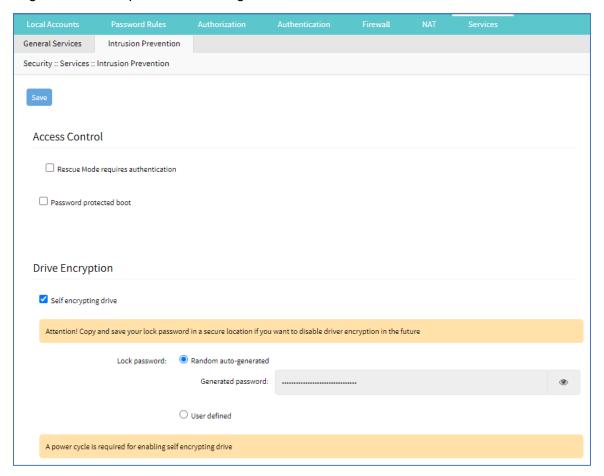

Enter Custom Cipher Suite.

9. Click Save.

Intrusion Prevention sub-tab

This configures intrusion prevention settings.

Configure Intrusion Prevention

WebUI Procedure

- 1. Go to Security :: Services :: Intrusion Prevention.
- 2. In Access Control menu:

Select Rescue Mode requires authentication checkbox.

Select **Password protected boot** checkbox (password required to reboot).

3. In *Drive Encryption* menu:

NOTE: This menu is only available if the drive is OPAL 2 compliant.

Select **Self encrypting drive** checkbox. If enabled, the device must be restarted for the change to take effect.

In Lock Password menu, select one:

Random auto-generated radio button (save password in a secure location - cannot be recovered if lost).

User defined radio button. Enter Password.

4. Click Save.

SED Pre-Boot Authenticator (PBA)

Install or upgrade the SED Pre-Boot authenticator

SED must be disabled before upgrading or installing the SED PBA. If currently enabled, enter the unlock password and disable it.

Contact a ZPE representative to get valid copies of these PBA image files:

pba.img

pba.img.sha256

- Copy the files to /var/sed
- 3. Restart the system and boot into Rescue Mode.
- 4. Execute the script:

/usr/sbin/sed_install.sh

5. When prompted, type:

continue.\

- 6. Enter the path to the SED PBA image file.
- 7. Enter the path to the SED PBA Image hash file.
- 8. Accept the SED PBA version check.
- 9. Wait for the installation to complete.
- 10. Once complete, power cycle the device for changes to take effect.

RFID Tag tab

This tab lists authorized RFID Keys. Currently, these keys are linked to the RFID Door Lock. When a RIFD Reader door lock is connected to the Nodegrid device, a card with the correct RFID tag (on this list) must be inserted to unlock the door.

NOTE: When the RIFD Reader door lock is connected to the Nodegrid device, it is automatically recognized.

Manage RFID Tag

Add RFID Tag

WebUI Procedure

- 1. Go to Security :: RFID Tag.
- Click Add (displays dialog).

- 3. Enter Tag Name.
- 4. Enter Tag ID.
- 5. Click Save.

Read RFID Tag from Card

WebUI Procedure

- 1. Go to Security :: RFID Tag.
- 2. Click Add (displays dialog).
- 3. Click RIFD Read.
- 4. Insert Card into RIFD Reader.
- 5. The **Tag Name** and **Tag ID** are populated.
- Click Save.

7. Repeat for additional cards.

Delete RFID Tag

WebUI Procedure

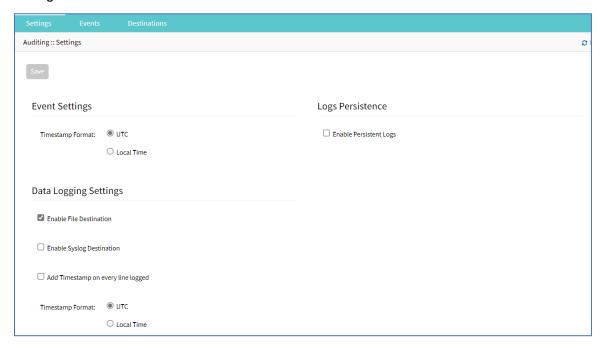

- 1. Go to Security :: RFID Tag.
- 2. Select checkbox.
- 3. Click Delete.

Auditing Section

This tracks events and data logging settings. Events can be distributed with four different methods: Email, File, SNMP Trap, and Syslog. Data logging and events logging can be stored locally, remotely (via NFS) or sent to a syslog server.

Settings tab

Log settings are configured here. Data logging captures the data stream on the device, as well as to and from target devices.

Data Logging Settings

Update Logging Settings

WebUI Procedure

1. Go to Auditing :: Settings.

2. In Event Setting menus

In **Timestamp Format**, select one:

UTC radio button (default).

Local Time radio button.

3. In Data Logging Settings menu:

Select **Enable File Destination** checkbox (if enabled, data logs stored at location defined in *Auditing :: Destination* - default: enabled).

Select **Enable Syslog Destination** checkbox (if enabled, data logs stored at location defined in *Auditing :: Destination* - default: disabled)..

Select Add Timestamp on every line logged checkbox.

In **Timestamp Format**, select one:

UTC radio button (default).

Local Time radio button.

4. In Logs Persistence menu:

Select Enable Persistent Logs checkbox.

5. Click Save.

Events tab

Events are automatically created based on event and device settings. By default, all events are stored to the local file system. This behavior is adjusted under *Auditing :: Events*. The administrator can configure to which destination events and which event categories are logged.

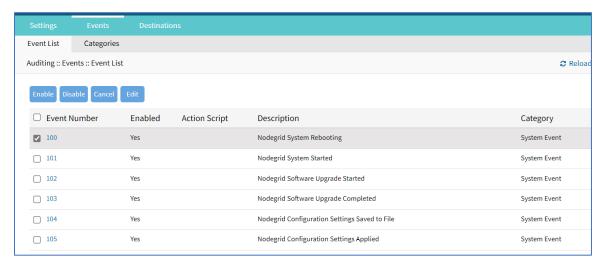

There are four event categories:

- Systems Events
- AAA Events
- Device Events
- Logging Events

Event List sub-tab

This is a list of events. The table lists all current event types: 100 – 527 (list can be variable).

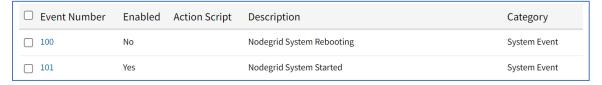

Enable/Disable Event

WebUI Procedure

- 1. Go to Auditing :: Events :: Event List.
- 2. Locate and select checkbox(es).
- 3. Click **Enable** to enable reporting of that event type.

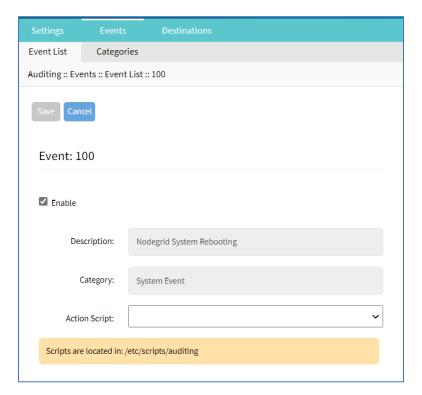

4. Click **Disable** to disable reporting of that event type.

Edit Event

WebUI Procedure

- 1. Go to Auditing :: Events :: Event List.
- Locate and select checkbox.
- 3. Click **Edit** (displays dialog).

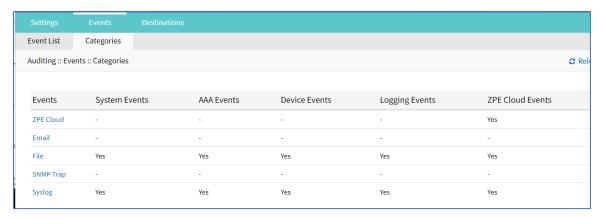

- 4. Select/unselect **Enable** checkbox (must be enabled to report occurrence).
- On Action Script drop-down, select one (list is based on existing scripts).
 NOTE: If event is enabled, and an action script assigned, the script runs when the event occurs.
- 6. Click Save.

Categories sub-tab

Category reporting is defined here. Table indicates current settings for reporting.

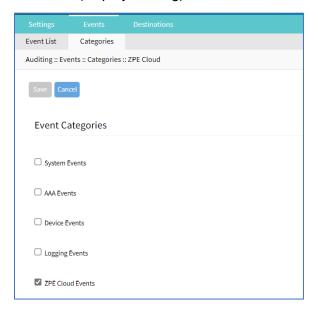

Set Categories for ZPE Cloud

WebUI Procedure

1. Go to Auditing :: Events :: Categories.

2. In Events column, click ZPE Cloud (displays dialog).

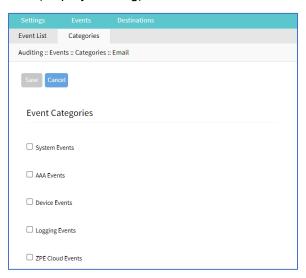

- 3. Select ZPE Cloud Events checkbox (events that occur in ZPE Cloud are reported).
- 4. Click Save.

Set Categories for Email

WebUI Procedure

- 1. Go to Auditing :: Events :: Categories.
- 2. In Events column, click Email (displays dialog).

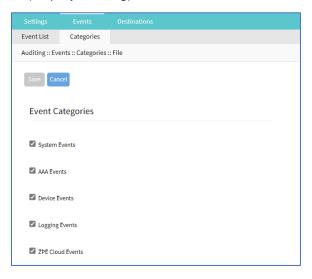

- 3. Select checkbox(es) that, when event occurs, email is sent (configured in *Auditing :: Destinations :: Email*.
- 4. Click Save.

Set Categories for File

WebUI Procedure

- 1. Go to Auditing :: Events :: Categories.
- 2. In Events column, click File (displays dialog).

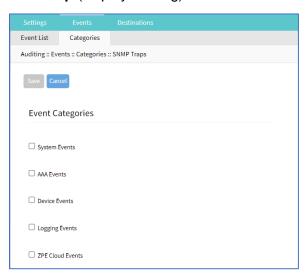

- 3. Select/unselect checkboxes, as needed.
- 4. Click Save.

Set Categories for SNMP Trap

WebUI Procedure

- 1. Go to Auditing :: Events :: Categories.
- 2. In Events column, click SNMP Trap (displays dialog).

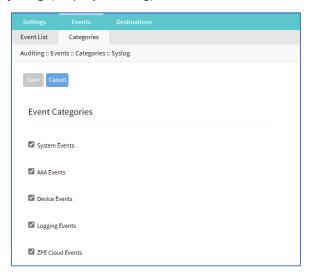

- 3. Select/unselect checkboxes, as needed.
- 4. Click Save.

Set Categories for Syslog

WebUI Procedure

- 1. Go to Auditing :: Events :: Categories.
- 2. In Events column, click Syslog (displays dialog).

- 3. Select/unselect checkboxes, as needed.
- 4. Click Save.

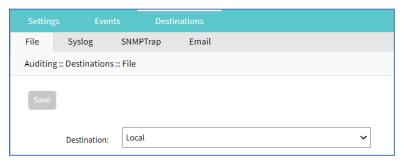

Destinations tab

Event Destinations are defined here.

File sub-tab

File destination and archive settings are configured here. By default, data logs are written to local files.

NOTE: NFS requires RPC service to be enabled (Security :: Services).

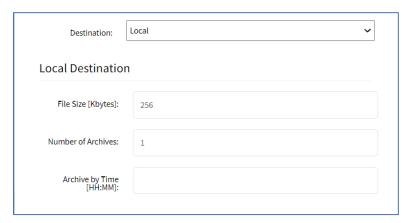

Configure File Settings

WebUI Procedure - Local Destination

- 1. Go to Auditing :: Destinations :: File.
- 2. On **Destination** drop-down, select **Local** (displays dialog):

3. In Local Destination menu:

Enter File Size [Kbytes] (0=disabled, up to 2048 KB - default: 1024).

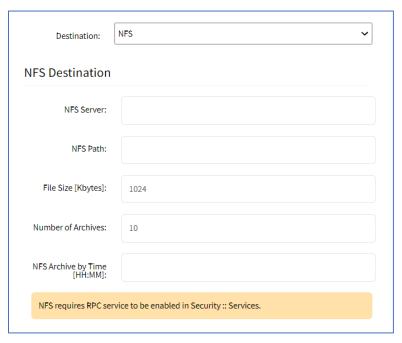

Enter Number of Archives (number of archive files before discard - default: 0, max: 99).

Enter Archive by Time [HH:MM] (when file archive is rotated - default: blank).

4. Click Save.

WebUI Procedure - NFS Destination

- 1. Go to Auditing :: Destinations :: File.
- 2. On **Destination** drop-down, select **NFS** (displays dialog):

3. In NFS Destination menu:

Enter NFS Server (IP address of NFS server).

Enter NFS Path (path to NFS root directory).

Enter File Size [Kbytes] (0=disabled, up to 2048 KB - default: 1024).

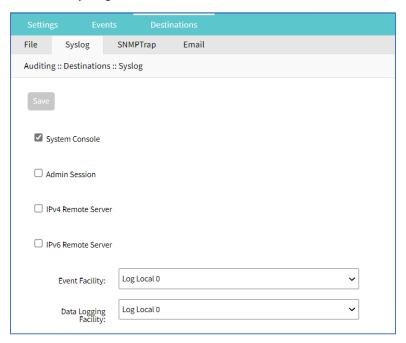

Enter Number of Archives (number of archive files before discard - default: 0, max: 99).

Enter NFS Archive by Time [HH:MM] (when file archive is rotated - default: blank).

4. Click Save.

Syslog sub-tab

Support destinations are: local Syslog destination or remote IPv4 and IPv6 destination.

Configure Syslog Settings

WebUI Procedure

- 1. Go to Auditing :: Destinations :: Syslog.
- 2. Select **System Console** checkbox.
- 3. Select Admin Session checkbox.
- 4. Select IPv4 Remote Server checkbox. Enter IPv4 Address or Hostname.

5. Select IPv6 Remote Server checkbox. Enter IPv6 Address or Hostname.

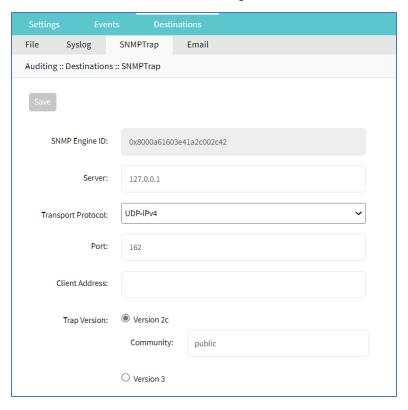

- 6. On Event Facility drop-down, select one (Log Local 0, Log Local 1, Log Local 2, Log Local 3, Log Local 4, Log Local 5).
- 7. On Data Logging Facility drop-down, select one (Log Local 0, Log Local 1, Log Local 2, Log Local 3, Log Local 4, Log Local 5).
- 8. Click Save.

SNMP Trap sub-tab

Any triggered event can be sent as an SNMP trap to an existing NMS system. SNMP v2 and 3 for traps is supported. The MIB files for the device are available together with the firmware files.

Configure SNMP Trap Settings

WebUI Procedure

- 1. Go to Auditing :: Destinations :: SNMP Trap.
- 2. Enter Server.

- 3. On **Transport Protocol** drop-down, select one (**UDP-IPv4**, **TCP-IPv4**, **UDP-IPv6**, **TCP-IPv6**) (protocol to send traps default: UDP-IPv4).
- 4. Enter **Port** (default: 161).
- Enter Client Address.
- 6. In Trap Version menu, select one:

NOTE: SNMP3 INFORM messages are currently not supported.

Version 2c radio button.

Enter Community.

Version 3 radio button.

Enter User Name.

On Security Level drop-down, select one (noAuthNoPriv, authNoPriv, authPriv).

On Authentication Algorithm drop-down, select one (MD5, SHA).

Enter Authentication Password.

On Privacy Algorithm drop-down, select one (DES, AES).

Enter Privacy Passphrase.

7. Click Save.

Access MIB files

CLI Procedure

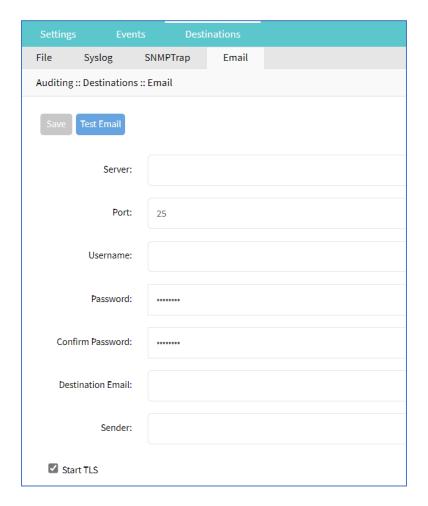

The MIB files are located as follows:

```
root@nodegrid:~# ls -l /usr/local/mibs/
total 104
-rw-r--r-- 1 root root 36940 Nov 20 2017 NodeGrid-MIB.asn
-rw-r--r-- 1 root root 61403 Nov 20 2017 NodeGrid-TRAP-MIB.asn
-rw-r--r-- 1 root root 2732 Nov 20 2017 ZPESystems.smi
```

Email sub-tab

Events can be sent to an email address.

Configure Email Settings

WebUI Procedure

- 1. Go to Auditing :: Destinations :: Email.
- 2. Enter Server.
- 3. Enter Port (default: 25).
- 4. Enter Username.
- 5. Enter Password and Confirm Password.
- 6. Enter **Destination Email**.
- 7. Enter Sender.
- 8. Select **Start TLS** checkbox (f TLS is used for communication).
- 9. Click Save.

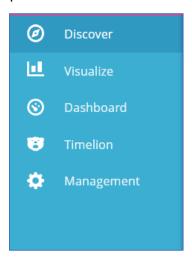

Dashboard Section

The Dashboard (WebUI only) allows visual presentations of Event activities, Managed Device details, and data monitoring. Multiple dashboards can be created for different purposes. For example, one to monitor managed device data points (i.e., Power Consumption, Voltage, Current, Temperature, Fan speed, etc.) Another dashboard can monitor Nodegrid events such as authentication failures, login, and logout

Description

Navigation Tabs

Navigation tabs are located on the left panel.

Toolbar Description

The Toolbar is show across top of the panel.

New

Initiates an option to create a new option - visualization, panel, etc..

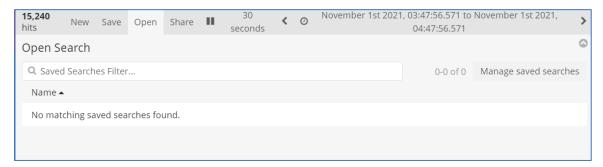

Save

Saves the settings of the current configuration with any modifications.

Open

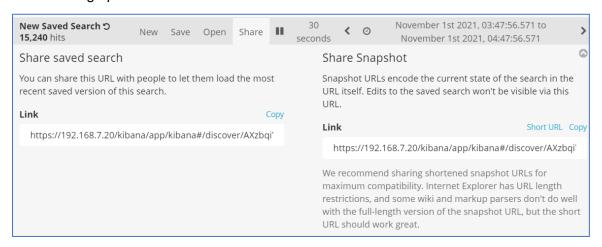

Displays Open Search dialog.

Share

Opens Share dialog options of the current saved search.

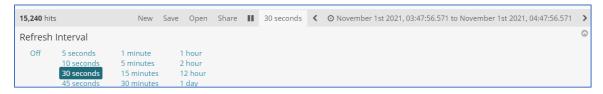

Click to play discovery to include modifications. Useful for testing parameter changes before saving.

< (back)

Click to move the display back in time.

Refresh interval

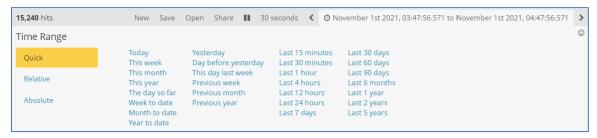

How often the results are checked and shown in the display.

Quick sub-tab

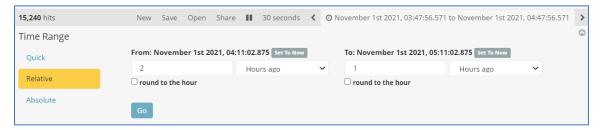

Quick options to select a relative time frame to current time.

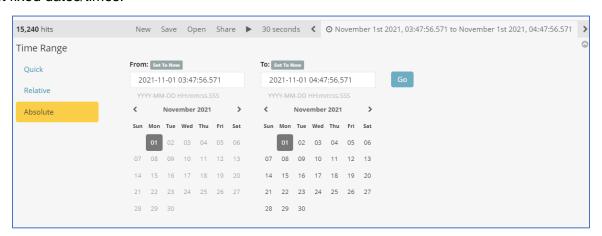

Relative sub-tab

Select custom time frames in relation to current time.

Absolute sub-tab

Select fixed dates/times.

> (forward)

Click to moves the display forward in time.

Search bar

Enter search criteria to locate details. Search expressions are used to select/limit data points on the visualization. They can be used as a filter for the whole visualization, or as a filter for the whole dashboard.

Search expressions are not restricted to data point fields. An expression can also refer to fields associated with the device (type, IP address, groups, custom fields, and more). For example, to collect current from each outlet in a selection of Rack PDUs, use one custom field "rack:abc" with another custom field "rack:xyz". Here are some search examples:

host:"ServertechPDU"

- collectd_type:"power"
- type_instance:"AA1"
- collectd_type:"power" AND type_instance:"AA1"

Configuration Expressions of Data Points

Data Point fields (logstash-* Index)

Field	Value	Description
host	Device Name	Name of the device being monitored.
plugin	snmp, ipmi, nominal, aggregation Name of the collection plugin.	
plugin_instance	sum, average	Instance of the plugin collecting the data, if the plugin requires it. Present in the aggregation plugin.
collectd_type	temperature, fan speed, humidity, counter, percent time left, voltage, current power, apparent_power, power_factor, frequency	Type of measurement.
type_instance	Data Point Name	Name of the element associated with measurement.

Device fields (logstash-* Index)

Field	Values	Description
name	Device Name	Name of the device being monitored.
mode	enabled, on demand, disabled	Device operational mode.
type	device type	Device type (assigned under Managed Devices).
family	ilo, drac, ipmi_1.5, ilmi_2.0, cimc_ucs, device_console, pdu	Device family.
addr_location	Address	Address (street, city, country).
coordinates	Coordinates	Latitude, longitude.
ip	IP address	Device IP address.
mac	MAC address	Device MAC address (if known).
alias	IP address alias	Alias of the IP address.
groups	list of groups	Groups authorized to access the device.
licensed	yes, no	Device license state.

Field	Values	Description
status	connected, disconnected, in-use, unknown	Current device status.
nodegrid	Nodegrid hostname	Device hostname that controls the device.
custom fields		Any configured custom field for the device.

Event fields (*_date_* Index)

Field	Value	Description
event_id	Number	Event ID number.
event_msg	Text	Event message.
host	Nodegrid hostname	Device hostname on which the event occurred.
message	Text	Full message text.

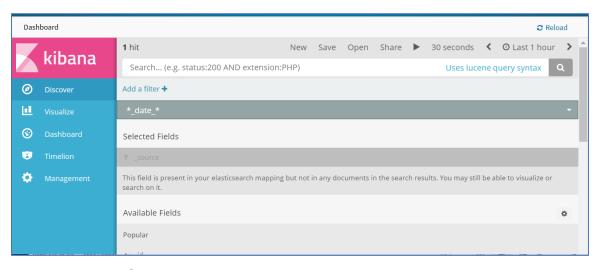

Discover tab

Data Point Exploration

This allows an inspection of the entire json document that was indexed

Collect Raw Data Points

10. Go to Dashboard :: Discover.

11. Click in the dark bar. On the drop-down, select the Index Pattern:

logstash-* (contains monitored data)

- * date * (contains event notifications)
- 12. Adjust the time frame as needed

By default, all displayed data is collected within the defined time frame.

- 13. Use **Search** to find a specific device or data point.
- 14. Verify that data points were collected.
- 15. Inspect the available fields.

NOTE: Collected data is buffered before stored. it may take up to a few minutes for data to display. If the data source produces a lot of content, buffers quickly fill up.

Visualize tab

Visualizations display aggregate data in a variety of options. Following are descriptions of data presentation.

Line Charts

Line Charts allow the visualization of data points along the line graph.

Create a Single or Multi-Line Chart (Configuration Example)

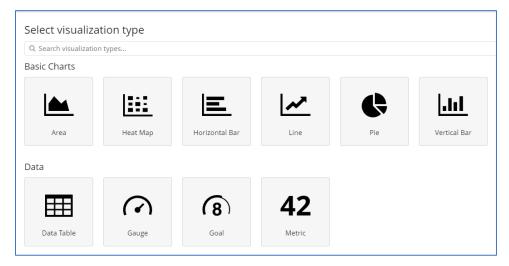

WebUI Procedure

- 16. Go to Dashboard:: Visualize.
- 17. Click the + icon.

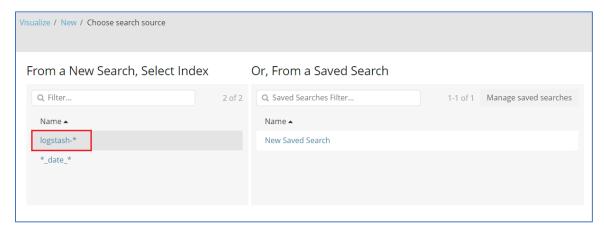

18. This displays the Select visualization type dialog.

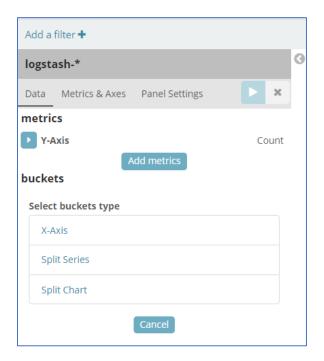

19. Click the **Line** icon. On the dialog, click **logstash-***.

20. In the From a New Search, Select Index menu, click logstash-* (displays editor dialog).

21. To select the data points to visualize, enter a search expression.

The search expression can be extended.

22. In the Metrics section, click Y-Axis arrow.

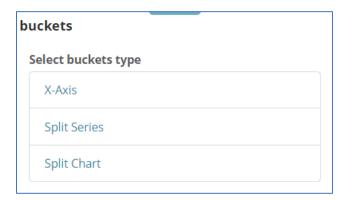

23. On the **Aggregation** drop-down, under *Metric Aggregations* section, select **Average** . In **Field** drop-down, select **value**.

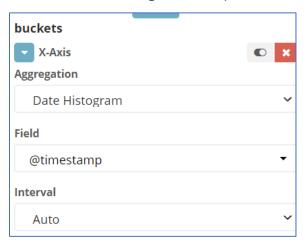

24. In buckets section, in Select buckets type menu, click X-Axis.

25. On Aggregation drop-down, select Date Histogram. Accept Field and Interval defaults.

26. On the Toolbar, click Save (displays dialog).

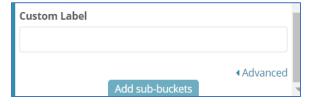

27. Enter a name for the visualization and click Save.

Create a Multi-Line Chart (Configuration Example)

Follow the Single-Line Chart example and continue these steps.

WebUI Procedure

28. Below Custom Label field, click Add sub-buckets.

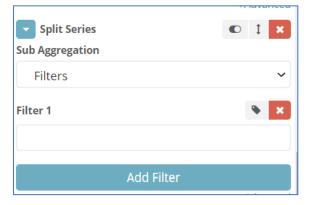

29. On the Select buckets type menu, click Split Series.

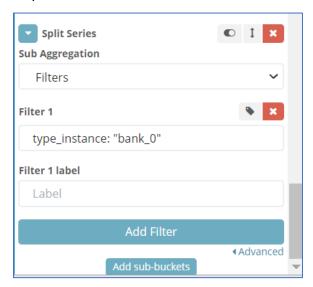

30. On **Sub Aggregation** drop-down, select **Filters**.

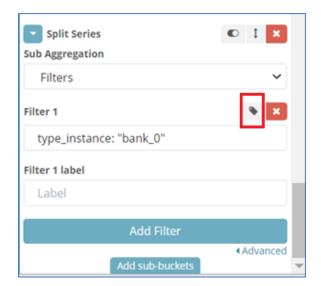

31. In **Filter 1**, enter a search expression for the elements to visualize.

32. (optional) To associate a label, click the **Settings** icon and enter **Filter 1 label**.

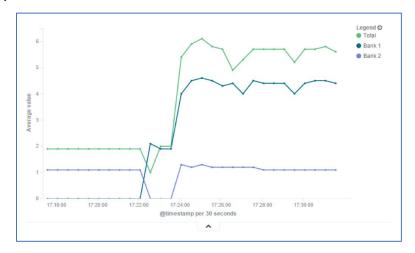

- 33. (as needed) Click Add Filter and repeat.
- 34. (as needed) Click Add sub-buckets and repeat.
- 35. To refresh the graph based on the configuration, click on the Play icon.

The graph example includes several sub-buckets.

36. On the Toolbar, click Save (displays dialog).

37. Enter a name for the visualization and click **Save**.

Area Charts

Create an Area Chart (Configuration Example)

The area chart is useful for stacking measurements for different but related entities.

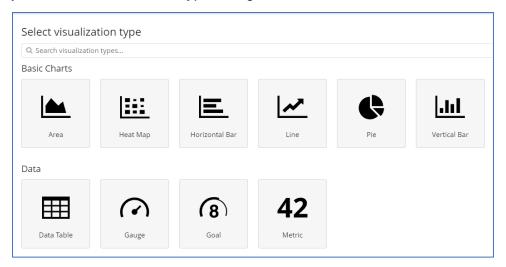

NOTE: Become familiar with the Line Chart procedure before creating an Area Chart,

WebUI Procedure

- 38. Go to Dashboard :: Visualize.
- 39. Click the + icon.

40. This displays the Select visualization type dialog.

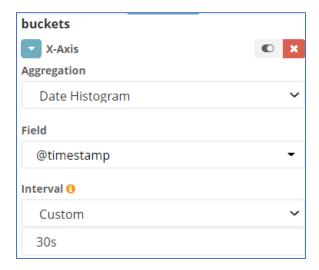

- 41. Click the Area icon. On the dialog, click logstash-*.
- 42. In *metrics* section, click on **Y-Axis** icon. In **Aggregation** drop-down, select **Sum**.

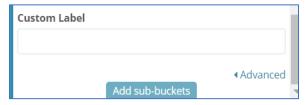

43. On *Buckets* menu, X-Axis, on **Aggregation** drop-down, select **Data Histogram**. In **Interval** drop-down, select **Custom** then enter value (i.e., 30s).

44. Below Custom Label field, click Add sub-buckets.

45. On the Select buckets type menu, click Split Series.

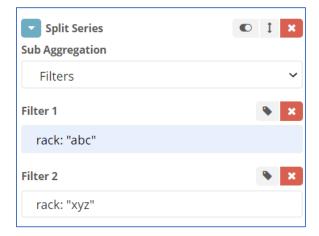

46. On Sub Aggregation drop-down, select Filters. In Filter 1, enter value. Click Add Filter.

47. In Filter 2, enter a search expression for the elements to visualize.

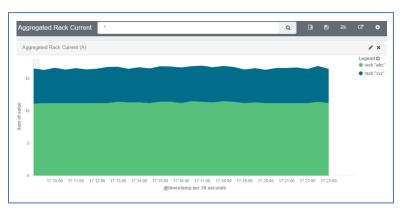

- 48. (as needed) Click Add Filter and repeat.
- 49. To refresh the graph based on the configuration, click on the Play icon.

The resulting visualization would look like this:

50. On the Toolbar, click Save (displays dialog).

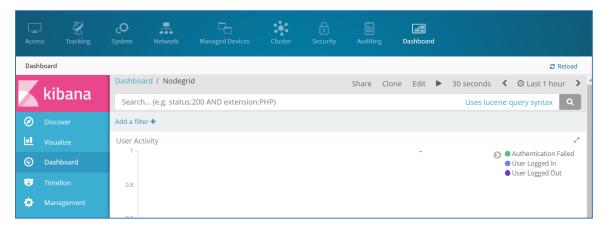

51. Enter a name for the visualization and click Save.

NOTE: When using area charts, be careful to not use the same measurement twice,

Dashboard tab

Dashboards are a collection of one or more visualizations. These objects can be created, modified, and deleted.

Manage Dashboards

Description

WebUI Procedure

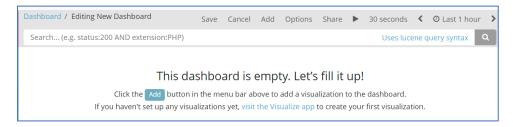

52. On the left side panel, click **Dashboard** tab (main panel lists saved visualizations).

53. On the Navigation bar, click the New Dashboard icon

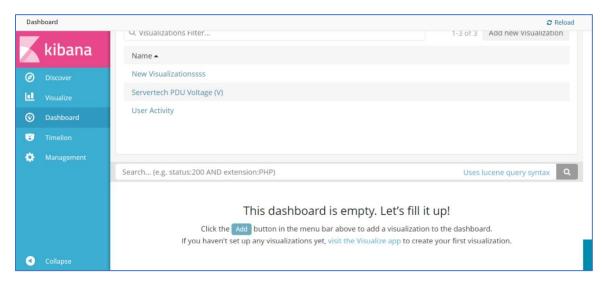

54. On the Editing New Dashboard panel, click Add.

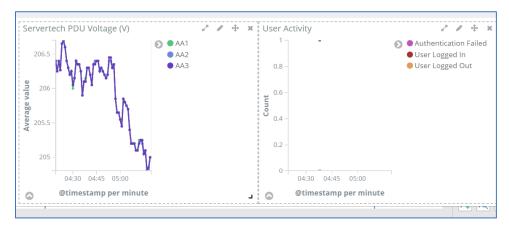

55. On the *Add Panels* dialog, top panel lists available visualizations. To the upper right is the option to create a new visualization. Below is the *dashboard* panel.

56. On the visualization list, click the first one to add. The visualization displays in the *dashboard* panel. Click others to add those to the *dashboard* panel.

- 57. Resize (lower right corner handle) and reposition (click, drag and drop) the graphs, as needed. .
- 58. If needed, to include a filter, click **Add a filter** (displays *Add a Filter* dialog).

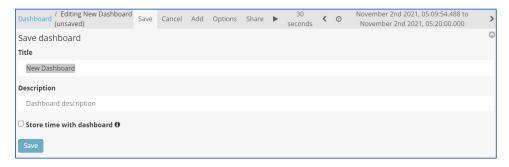

Select from Filter drop-down, Enter Label, then click Save.

59. When the dashboard appearance and details are ready, click Save icon.

60. On the Save dashboard dialog:

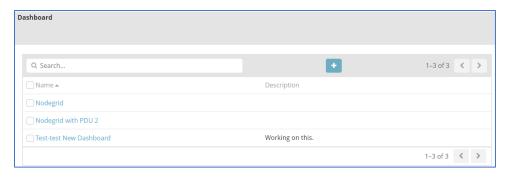

Enter Title.

Enter **Description**.

(optional) Select Store time with dashboard checkbox.

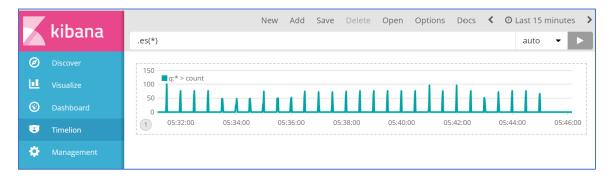

Click Save.

61. The new dashboard is added to the list.

Timelion tab

This is another visualization tool for time-based data analysis. For example, it can view specific data activity on a timeline basis. The chart results can be analyzed in various time segments (daily, weekly, etc.).

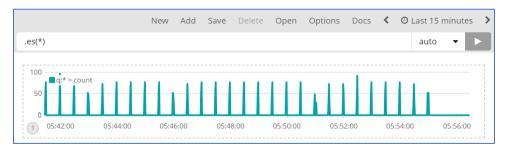

Toolbar tabs

On the Toolbar, these functions are available:

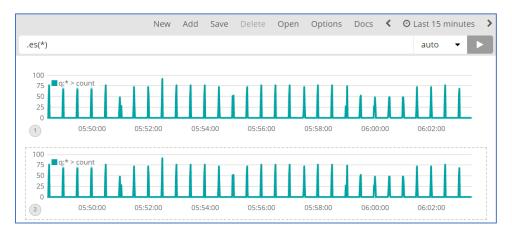

New sub-tab

Option to modify the display (change field, change time

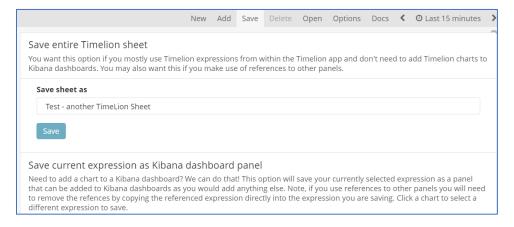

Add sub-tab

Adds another visualization chart.

Save sub-tab

Saves the current configuration. Click on one paragraph, as needed.

Delete sub-tab

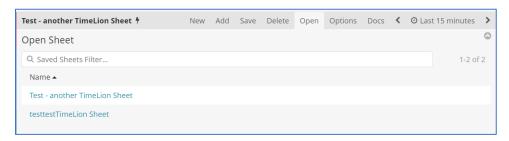

Displays pop-up dialog to confirm deletion of the current displayed visualization.

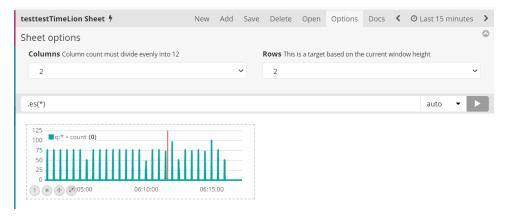

Open sub-tab

Displays Open Sheet dialog to select a visualization...

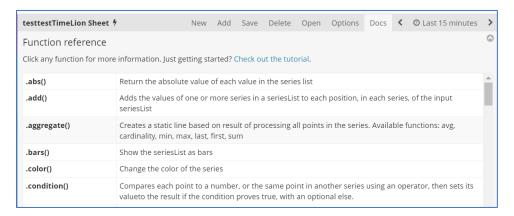

Options sub-tab

Displays options to modify display of the visualization (Columns, Rows, etc.)

Docs sub-tab

Displays the Function Reference details.

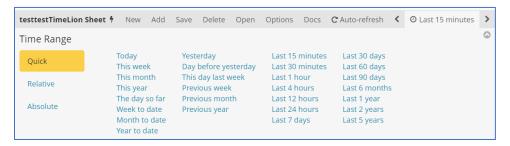

< (back)

Click to move the display back in time.

Time Range sub-tab

Option to modify the time range of the visualization.

> (forward)

Click to moves the display forward in time.

Management tab

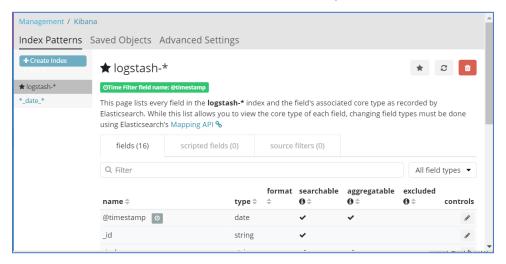

This manage index patterns, saved objects. The advanced settings can tweak some points, especially visualizations.

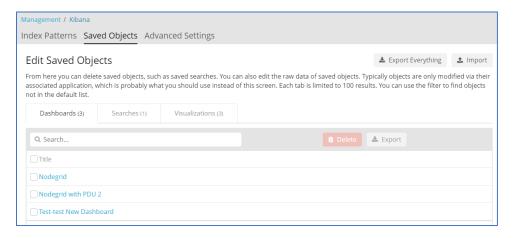

Index Patterns sub-tab

Displays details of selected index patterns (screenshot shows logstash-*).

Saved Objects sub-tab

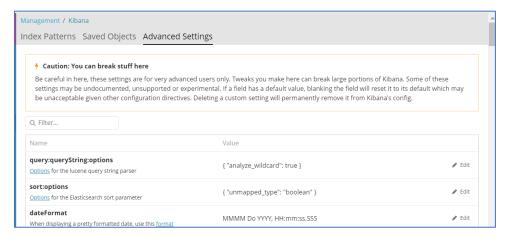

Displays Edit Saved Objects. To modify, click name on list.

Advanced Settings sub-tab

Settings can be directly edited here (admin privileges required). Carefully read the **Caution** statement, especially for the size of the history of saved search queries.

Applications Section

Nodegrid devices can run additional applications. These provide expanded software capabilities. The most used apps are in the areas of monitoring and SD-WAN. While all Nodegrid units support this feature, the Services Router Family is designed to run applications to enhance a wide variety of connectivity options.

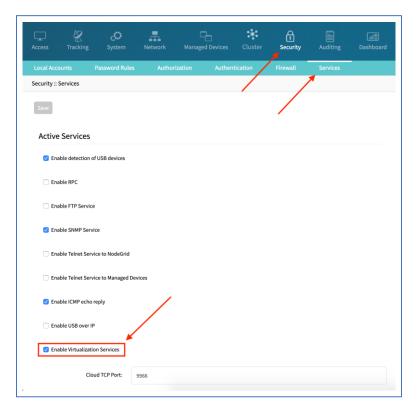

NOTE: To run applications, additional licenses are required.

Docker Applications

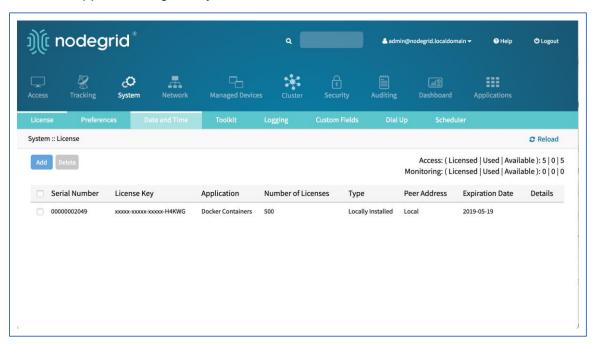

Docker is an open platform to build, ship and run distributed applications. Admnistrators can run Docker apps on Nodegrid. Docker applications can be pulled from **Docker Hub**, starting and stopping of the Docker Containers.

NOTE: To activate virtualization, go to *Security*:: *Services* and select **Enable Virtualization Services**. This is necessary to run NFV's or Docker apps. Both features require licenses (System :: License).

To view licensed applications, go to System :: Licenses.

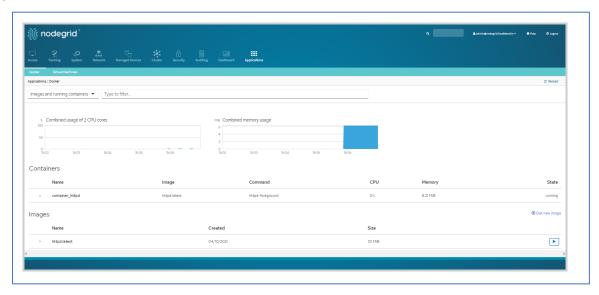

NOTE: The management of Docker Applications is currently only available through the WebUI. The WebUI provides a basic interface to manage Docker Containers. For more advanced features can administrators use the docker command line tools.

Docker Images

Administrators can directly download images from the Docker Hub to *Applications :: Docker*. The Nodegrid device must have access to the Docker Hub.

Each container can be configured with several parameters, including exposed ports, memory allocation, environmental variables, name, etc. When a container is created, detailed information is displayed in drop-down menus.

Add a new Docker Image

NOTE: Requires administrator privileges.

WebUI Procedure

- 1. Ensure the virtualization license is valid, and device firmware version is 5.2 or later.
- 2. Go to Security:: Services and ensure Docker services are enabled.
- 3. Go to Applications :: Docker.
- 4. Click Get new image.
- 5. Type **httpd** and press enter
- 6. On the list, select the image and click **Download**.
- 7. On download, the image is listed in the Images table.

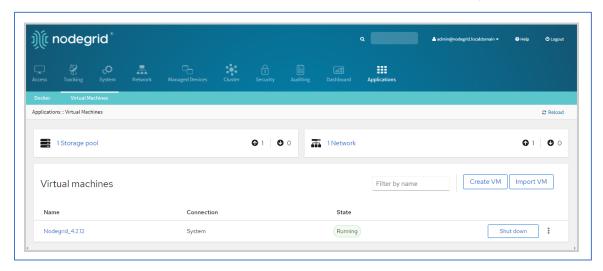

Add a New Docker Container

- 1. Select the image and click Play.
- 2. Adjust the configuration details.
- 3. Click Run.

Virtual Machines (VM)

On *Applications :: Virtual Machines*, virtual machines can be created, imported, and managed. Within the drop-down menu, an embedded VNC terminal is available and automatically started with the VM.

For additional details please see the official **Docker create** documentation.

NOTE: After the container is created, it does not automatically start.

Libvirt VM Tool

Create a new VM via Libvirt

- Copy the .iso image to /var/lib/libvirt/images
- 2. Go to Applications :: Virtual Machines.
- Click Create VM.
- 4. In the Installation Source field, enter: /var/lib/libvirt/images/<nameoffile>

NOTE: To select, click on the file name.

5. Provide the following information:

Image name (Name of a Docker Image, see *Applications :: Images*)

(optional) **Command** (Command to run within the container)

Hostname (Hostname assigned to the container)

Domain (Domain name assigned to the container)

Container Name (Name of the container)

CPUs (Number of CPU's assigned to the container)

Memory(MB) (Amount of RAM assigned to the container)

(optional) **Arguments** (Options to be used on the container)

6. Click Create.

Application Links

Administrators can create simple web links to run containers and other applications.

Create Application Link

WebUI Procedure

- 1. Go to Applications :: Links.
- 2. Click Add (displays dialog).
- 3. Enter a Name for the link.
- 4. In URL, provide a valid URL.
- 5. Click **Select Icon** to choose an icon associated with the link.

- 6. Click Save.
- 7. When the link is created, click to test.

NOTE: Depending on the Application, there can be an advantage to create a target device for the created Application.

Network Function Virtualization

Administrators can run additional NFV's or other Virtual Machines. A large variety of configuration options is available through the command line interface.

Contact <u>Technical Support</u> for more information.

Appendix A – General Information

Technical Support

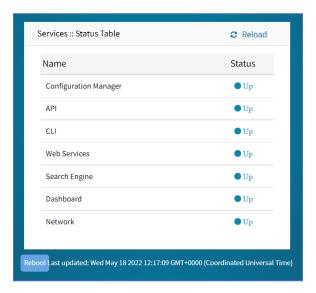

Our Technical Support staff provides assistance in any operational or installation issues for the Nodegrid products. For any question first follow this procedure:

Our Technical Support staff provides assistance in any operational or installation issues for the Nodegrid products. For any question first follow this procedure:

- 1. From the Device WebUI, open the device help. Based on the WebUI location of the situation, go to the document location for that feature/function.
- 2. Check the Online help documentation at www.zpesystems.com/support
- (admin privileges only) Access the https://<Nodegrid URL>/services/status.
 Enter the login credentials.

On the *Status* page, review contents.

As needed, check the Knowledge Base or submit a Support Tickets.

++++++++++++++++

To enable/disable access, go to: Security:: Services. In Active Services menu, select/unselct:

Enable Services Status Page checkbox (default: enabled)

(as needed) Enable reboot on Service Status Page checkbox (default: enabled)

++++++++++++++++

4. Visit our Help Center Website for the Knowledge Base and other useful links.

Support Ticket

Submit an online ticket request

- 1. At the top-right of the WebUI, click Submit a request.
- 2. In the form, enter the required information. Provide as much detailed information as possible on the description of the problem or question.
- 3. If needed, a file or graphic image can be attached.
- 4. Select the **I'm not a robot** checkbox.
- Click Submit.

A response email will be sent to you from ZPE Systems that confirms your request was received. The email includes the Support Ticket Number. This is needed as reference.

Updates and Patches

To automatically receive information about important security patch announcements, future firmware updates, and other technical information, sign up to **The Loop** at www.zpesystems.com/loop/

Manage Virtual Machines

Management of VMWare virtual machines are supported, including KVM Virtual Machines.

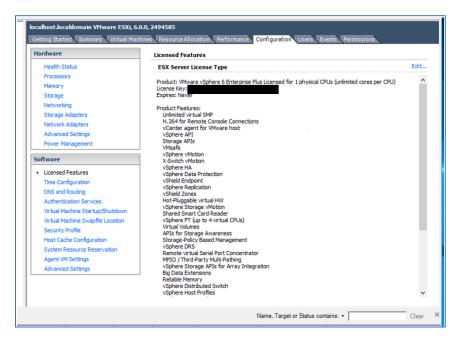

These features are available:

- MKS Sessions (for VMWare machines only)
- Virtual Serial console session (for VMWare machines only)
- Console session (for KVM machines only)
- Power Control through the hypervisor
- Web Session to the device

Direct connections to ESX or VSphere servers are supported. When a direct connection is made, the ESX server has to support the feature: "vCenter agent for VMware Host". This is enabled through an ESX server license.

To check if the ESX server supports this feature, login to the ESX host and go to the *License Feature* section. Host supported licenses and features are listed.

NOTE: To utilize the vSPC option with VMWare virtual machines, the port must be configured on the Virtual Machine..

Virtual Serial Port (vSPC) on VM Servers

To redirect the VMware VM vSPC data to the Nodegrid Platform, the VM serial port needs to be configured.

Configure vSPC on VM Server

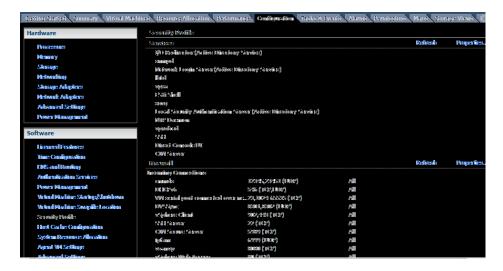

Ensure the VM is turned off.

- 1. Open the ESXi configuration (vSphere).
- 2. Select the VM and click Edit Virtual Machine Settings.
- Click Add (displays dialog).
- 4. Click Serial Manager Device.
- 5. On the pop-up dialog, click Next.
- 6. Click Connect Via Network, then click Next.
- 7. Select Client (VM initiates the connection).t
- (optional) For Port URI, enter <group_id> where group_id is an identifier used during the Auto Discovery (to relate servers of the same group).
- On vSPC URI, type telnet://<IP or Nodegrid Manager hostname>:9977.
- 10. Click Finish.

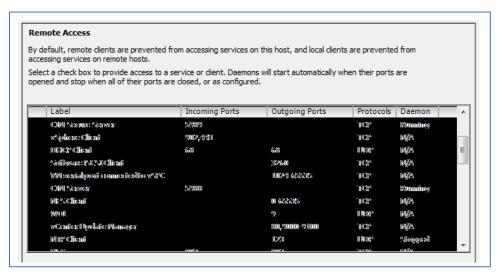

11. On the ESXi firewall, ensure the vSPC port is enabled. To confirm, go to **ESXi Configuration**, select **Security Profile** and click on **Properties**.

12. On the Remote Access page, review the box related to VM serial port connected to vSPC.

Outgoing Ports should have a TCP port range starting from 1024 or higher. The port range must include the TCP port used on the vSPC URI field (default 9977).

Modify Outgoing Port Range

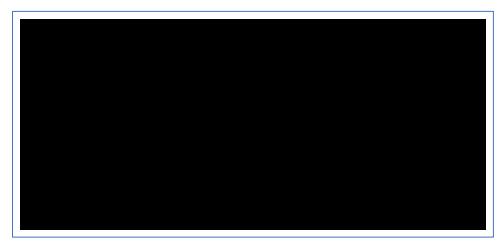

1. Connect to the ESXi command line.

2. Execute the following commands:

3. Edit the port section:

4. Save the changes and then restart the firewall service.

For further information on VMware firewall, please refer to the VMware Knowledge Base.

Serial Port Pinout

The tables below display serial port pinout information.

Cisco-like Pinout

Pin	Signal name	Input/output
1	стѕ	IN
2	DCD	IN
3	RxD	IN
4	GND	N/A
5	GND	N/A
6	TxD	OUT

Pin	Signal name	Input/output
7	DTR	OUT
8	RTS	OUT

Legacy Pinout

Pin	Signal name	Input/output
1	RTS	OUT
2	DTR	OUT
3	TxD	OUT
4	GND	N/A
5	стѕ	IN
6	RxD	IN
7	DCD	IN
8	Unused	N/A

Safety

Data Persistence

In normal operation, when data logging is enabled (Configuration settings), this data is stored in non-volatile memory:

- user data from keystrokes
- managed devices output
- device monitoring data passing through a Nodegrid device

Nodegrid Device Memory

Nodegrid devices contain the following separate memory devices:

BIOS

Memory Size: 64MB Memory Type: NOR Flash Volatility: Nonvolatile User Data: No

Flash Disk

Memory Size: 32 GB or 64 GB. Other custom sizes may be used. Memory Type: SSD Volatility: Nonvolatile User Data: Yes. Partition/Data: sda2 - unit configuration sda5 - backup configuration sda8 - user home directories and log files

RAM

Memory Size: 4 GB or 8 GB Memory Type: DDR3 Volatility: Volatile User Data: Yes

Remove Data from Nonvolatile Memory

Soft Removal of User Data from Nonvolatile Memory

Removes files and installs factory default configuration on flash disk.

Restore Factory Default Configuration

- 1. Shutdown Nodegrid device and power off.
- 2. To remove the device from the network, disconnect Ethernet cables.
- 3. Disconnect any USB storage device and USB network device connected to device.

4. To access Nodegrid unit, use one of these options:

Connect a terminal/workstation to the Nodegrid console port (RJ-45 console adapter) and a straight-through network cable.

Connect a HDMI monitor (HDMI port) and USB keyboard (USB port).

- 5. Power on the device.
- 6. On the following menu, **Nodegrid Rescue Mode**.

7. At the prompt ("bash-4.3#"), run this command (erases all files and loads factory configuration):

```
apply_settings --factory-and-cleanlogs -f -h
```

8. Wait for this message:

```
Apply factory settings completed. INIT:
Switching [ ... ] reboot: System halted
```

9. Power off the unit.

Hard Removal - Secure Erase

This completely erases the flash disk. This procedure destroys ALL data on flash disk and render it unrecoverable even by data recovery services. After that, the Nodegrid software must be reinstalled via network.

Fully Erase Nonvolatile Memory

- 1. Shutdown Nodegrid device and power off.
- 2. To remove the device from the network, disconnect Ethernet cables.
- Disconnect any USB storage device and USB network device connected to device.

4. To access Nodegrid unit, use one of these options:

Connect a terminal/workstation to the Nodegrid console port (RJ-45 console adapter) and a straight-through network cable.

Connect a HDMI monitor (HDMI port) and USB keyboard (USB port).

- 5. Power on the device.
- 6. When the BIOS setup page appears, press the 'Esc' key.
- 7. In the Grub Menu, select **Nodegrid Platform Secure Erase**.

8. Type 'erase' to permanently erase all data from the system:

Nodegrid Boot live - Secure Erase

This action will completely erase the system. Using this procedure will destroy ALL data on the SSD and render it unrecoverable even by data recovery services. After executing this step, system software will no longer exist and must be reinstalled via network. Type 'erase' to secure erase the SSD or 'cancel' to reboot:

NOTE: Secure Erase requires the unit be power cycled (powered off and powered on) prior to the erase command execution. Otherwise, the following message displays and the system halts to allow the power cycle to be done.

Operation not supported. Unit must be power cycled prior to erase command. Wait for system halt and power cycle the unit. [4.614365] reboot: System halted

9. Type **yes** to confirm.

Secure erase cannot be canceled once confirmed. Type 'yes' to confirm secure erase:

10. Wait for the **System halted** message.

Secure erase of SDD will start now... security_password="PasSWorD" /dev/sda: Issuing SECURITY_SET_PASS command, password="PasSWorD", user=user, mode=high

11. Power off the unit.

You can find a copy of the Letter of Volatility here.

Mount Remote Shares for Virtual Media

Nodegrid supports remote shares (NFS or Windows shares) to contain files shared with Service Processor systems. Before the files can be shared out through the Virtual Media function, the remote share must be mounted to the Nodegrid device.

CLI Procedure

- 1. Connect to the Nodegrid shell as the root user.
- 2. Go to /var/firefox/datastore/
- 3. Create a folder.
- 4. Use the mount command to mount the remote share to the folder.

To permanently get the share mounted, the mount command can be added to the /etc/fstab file.

Example: NFS mount to folder VirtualMedia

mount -t nfs 192.168.1.1.:/NFS/NG /var/firefox/datastore/VirtualMedia

Monitoring Templates

This monitors and collects sensor data from Managed Devices, connected to a Nodegrid sensor or that support SNMP or IPMI protocol.

The collected data are defined and controlled through Monitoring Templates which will be assigned to a monitored device during its configuration.

Customize a Monitoring Template

Several preexisting monitoring templates are available. These typically fulfill user requirements. As needed, these templates can be customized. All templates are text files, located in sub directories at /etc/collectd.templates according to the protocol used to collect monitoring data (SNMP or IPMI).

/etc/collectd.templates/snmp

/etc/collectd.templates/ipmi

Any new file added to these directories automatically appear in the user interface.

SNMP Template

Create a new SNMP Template

CLI Procedure

- 1. Login to the Shell as root.
- 2. Create a copy of one existing template as a starting point for the new template.
- 3. Each SNMP template file has two types of subsections:
 - Data (one entry per data point, each identified by a unique ID.)
 - Host (one single entry, defined SNMP parameters, collecting interval, and data points to be collected.)
- 4. The template file should only include data points of general common use. All other data points can be removed from the file.
- 5. Use commit to save the template.

Settings and Values for Data Entry

Setting	Value	Description
Data	Internal name of the data point as it is collected. Should be unique.	Cannot have spaces. Example: "pdu_in_cur", "pdu_in_vol".
Туре	Temperature, fan speed, humidity, counter, percent time left, voltage, current power, apparent_power, power_factor, frequency	Data type
Table	True/False	reflects if the OID is part of a table or not
Instance	True/False	If Table= true (SNMP OID prefix retrieves a list of names associated with the corresponding values). For example, in a PDU this could be the outlet name. If Table = false (name of the instance is associated with the value)
InstancePrefi x	String	(optional) String to prepend to the Instance, enclosed in double quotes.
Values	True/False	If Table = true (SNMP OID prefix retrieves a list of values). If Table = false (SNMP OID retrieves a single value).
Scale	Decimal value	(optional) Decimal value to be multiplied to the value retrieved before persisting it.

Example:

```
Table true
Instance ".1.3.6.1.4.1.476.1.42.3.8.40.20.1.20"
Values ".1.3.6.1.4.1.476.1.42.3.8.40.20.1.130"
Scale 0.01
</Data>
```

The host entry in an SNMP template only requires an adjustment in the Collect setting. The values list should contain a list of all data entries to be collected. All listed data entries require a corresponding data entry definition.

IPMI Discovery Template

The discovery template for IPMI automatically discovers all available sensors on an IPMI device. The template has one subsection.

IPMI Options

Setting	Value	Description
AuthType	None, md2, md5, straight	Authentication type for the IPMI protocol (default: negotiate the strongest one).
Privilege	Callback, user, operator, admin	Privilege level for IPMI protocol (default: admin).
Sensor	Name of the Sensor to be collected	Selects sensors to collect or ignore, depending on "Ignore, Selected" setting. Can be defined multiple times, each for one selected sensor.
IgnoreSelected	True/False	If true, does not collect for the sensors selected by Sensor. If false, only collects for the sensors selected by Sensor.
Scale	un	(optional) A decimal value to be multiplied to the value retrieved before persisting it.

Enable Monitoring

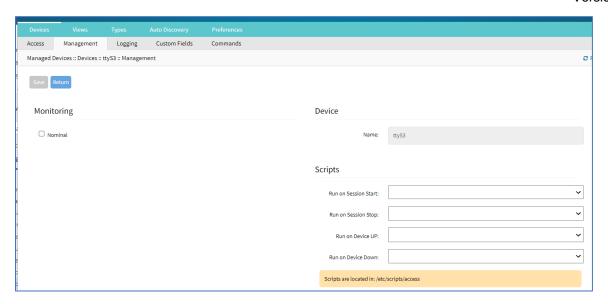

Monitoring is enabled on a per-device basis. The settings are part of the Managed Device settings.

WebUI Procedure

1. Go to Managed Devices :: <device name> :: Management.

NOTE: for <device name> on Devices table, click on a device to display the dialog with sub-tabs.

- 2. Enable and configure the required monitoring protocol like SNMP or IPMI
- 3. Select **Enable Monitoring** checkbox.
- 4. Assign the template
- 5. Assign the collection interval.
- 6. Click Save.

Supported Nodegrid Devices

USB Passthrough

This feature requires the latest USB controller (currently only available for NSR). Support for the Link SR, Bold SR, and Gate SR will become available in future releases. NSC does not support this feature.

USB Passthrough ties two consecutive ports (defined by the hardware). Two operation modes are available for USB ports:

Host Mode

USB devices connected to the port are detected. Power to the port can be controlled.

Passthrough Mode

USB devices connected to the port are not detected. Power to the port is not available.

USB Power

The USB Power feature allows control of power to specific USB ports. This requires the latest USB controller (currently only available for NSR). Support for the Link SR, Bold SR, and Gate SR will become available in future releases. NSC does not support this feature.

USB ports for the new hardware have two operation modes:

Host Mode

USB devices connected to the port are detected. Power to the port can be controlled.

Passthrough Mode

USB devices connected to the port are not detected. Power to the port is not available.

Nodegrid automatically detects if the installed USB card supports Power Control. Required configuration files are updated during boot. All USB ports are configured with USB mode set to Host. Initial state (by default) is set to On.

NOTE: Devices with internal USB Serial adapters that provide power do not allow the USB Power option to be on or off.

USB Type

If Power Control is supported, the USB Type can be configured without the device connected to the port. Three options are available:

```
usb_serialB (USB serial adapter)
usb_sensor (USB sensors – i.e., TRH320 for temperature and humidity)
usb_device (all other USB devices)
```

When usb_device is selected, Management and Monitoring tabs are not available.

KVM Dongle

With the KVM USB dongle, a KVM session can be established to a legacy server (VGA and USB connection). The System automatically detects the dongle when it is connected. The device must be enabled.

Bluetooth

Bluetooth devices are supported. These are primarily used for monitoring and IoT applications. The Bluetooth functionality is provided through the Nodegrid WiFi module which is available for the Nodegrid Service Router family.

By default, the Bluetooth functionality is disabled. It must be manually enabled before use.

An admin user can enable the service via the shell with these commands:

```
[admin@nodegrid /]# shell sudo su -
root@nodegrid:~#sed -i
s/^BLUETOOTH_ENABLED=0/BLUETOOTH_ENABLED=1/g/etc/default/Bluetooth
root@nodegrid:~#sed -i s/^#AutoEnable=true/AutoEnable=true/g /etc/bluetooth/main.conf
root@nodegrid:~#sed -i
s/^#InitiallyPowered=true/InitiallyPowered=true/g/etc/bluetooth/main.conf
root@nodegrid:~# /etc/init.d/bluetooth start
root@nodegrid:~# bluetoothctl
root@nodegrid:~# [bluetooth]# scan on
```

After that, Bluetooth devices can be paired to the Nodegrid, then configured for monitoring or an IoT application.

To pair to a device, use the bluetoothctl command:

```
root@nodegrid:~#bluetoothctl bluetoothctl
[bluetooth]# devices
Device 00:16:94:1A:EA:2C Sensor
[bluetooth]# pair 00:16:94:1A:EA:2C
Attempting to pair with 00:16:94:1A:EA:2C
Pairing successful
[bluetooth]# connect 00:16:94:1A:EA:2C
Attempting to connect to 00:16:94:1A:EA:2C
[bluetooth]# quit
```

PXE Boot

Nodegrid supports PXE boot (Pre-Boot Execution Environment). PXE is part of the UEFI (Unified Extensible Firmware Interface) used to boot a software image retrieved at boot time from a network server. Data centers prefer this method for OS booting, installation, and deployment.

By default, PXE boot is enabled in Nodegrid. It can be disabled on WebUI (Security::Services) or CLI (/settings/services scope). The example shows how to configure the DHCP/PXE server in Linux (Ubuntu) with installed Apache web server, tftpd-hpa service and Nodegrid 5.2.x.

NOTE: PXE, DHCP and TFTP servers must be installed.

- 1. Download Nodegrid network boot files (tarball) Contact Support to obtain the file
- 2. Copy Nodegrid network boot tar.gz(tarball) file to the DHCP server
- 3. Unzip the tar file (creates two directories: nodegrid 5.2.xx and boot).

Alternatively, create the directory and put tar file in that directory. Then unzip the tarball file (i.e., cd /var/lib/tftpboot/PXE directory).

Example:

```
root@ubuntu-srv1:~# cd /var/lib/tftpboot/
root@ubuntu-srv1:/var/lib/tftpboot# ls -l
drwxrwxr-x 2 root root 4096 Apr 24 03:20 nodegrid-5.2.xx
root@ubuntu-srv1:/var/lib/tftpboot# ls -l nodegrid-5.2.xx
total 558468
-rw-r--r-- 1 root root 22270823 Apr 24 03:19 initrd
-rw-rw-r-- 1 root root 544343672 Apr 24 03:19 rootfs.img.gz
-rw-rw-r-- 1 root root 7 Apr 24 03:19 version
-rw-r--r-- 1 root root 5242832 Apr 24 03:19 vmlinuz
root@ubuntu-srv1:/var/lib/tftpboot#
```

4. (optional) To format the Hard Drive, create a file named "reformat" inside the nodegrid directory Example:

```
touch nodegrid-5.4.xx/reformat
```

5. Open **dhcpd.conf** and add these lines in the "host definition" section. The hardware ethernet value must match the Nodegrid device MAC address. The fixed-address is the Nodegrid device IP address.

Legacy Mode Example

```
host PXEboot_NSC {
    hardware ethernet e4:1a:2c:56:02:9e;
    fixed-address 192.168.22.61;
    option tftp-server-name "192.168.22.201";
    next-server 192.168.22.201;
    option bootfile-name "PXE/boot/grub/i386-pc/core.0";
    option domain-name "zpesystems.com";
    option domain-name-servers 192.168.22.205, 75.75.75.75, 75.75.76.76;
    option routers 192.168.22.202;
}
```

UEFI Mode Example:

```
host PXEboot_NSC {
    hardware ethernet e4:1a:2c:56:02:9e;
    fixed-address 192.168.22.61;
    option tftp-server-name "192.168.22.201";
    next-server 192.168.22.201;
    option bootfile-name "PXE/boot/grub/x86_64-efi/core.efi";
    option domain-name "zpesystems.com";
    option domain-name-servers 192.168.22.205, 75.75.75, 75.75.76.76;
    option routers 192.168.22.202;
}
```

6. On Web server (i.e., Apache), cd /var/www and create a soft link to the file for the network boot: In -s and filename to link to the directory.

```
root@ubuntu-srv1:/var/www# pwd
root@ubuntu-srv1:/var/www#
root@ubuntu-srv1:/var/www# ln -sf /var/lib/tftpboot/PXE/nodegrid-5.2.xx/ nodegrid-
5.2.xx
```

7. Restart the DHCP server.

```
sudo service isc-dhcp-server restart
```

- 8. Restart tftpd-hpa process.
- 9. Start the Nodegrid device. This installs the Nodegrid netboot image on the device.

VRRP (Virtual Router Redundancy Protocol)

The Nodegrid Platform supports embedded Virtual Router Redundancy Protocol (VRRP). This allows Nodegrid to become part of a virtual router interface (provides router redundancy). This is used to provide automatic failover support for default gateways. By default, VRRP is not configured. To enable support, the service must first be configured by an administrator using the shell.

NOTE: VRRP can only be used with network interfaces directly exposed to the Nodegrid OS. Individual switch ports on a Nodegrid Service Router card cannot be used.

VRRP provides redundancy. If there are two Nodegrid SR devices, one can be configured to be the VRRP master, and the other to be the VRRP backup. One SR is connected to the other and assigned a virtual IP address in keepalived configuration. The connection uses the SR (configured as master). If the first SR goes down, the VRRP assigns the virtual IP to the backup SR. The traffic continues on the second SR.

VRRP support is implemented through *keepalived* services. Official documentation for the service is available on the <u>Keep Alived web site</u>.

CLI Procedure

The service configuration files are located in /etc/keepalived/. At a minimum, the keepalived.conf must be a valid configuration. The service is started with this command.

```
/etc/init.d/keepalived start
```

To automatically start keepalived on the next system start, run this command:

```
update-rc.d -s keepalived defaults 90
```

Example Configuration

The following configuration uses IPv6 for the above topology, but IPv4 is also supported and configured in a similar process.

Router Configuration

Example:

```
sw1$ ip link add name br0 type bridge vlan_filtering 1 mcast_snooping 0
sw1$ ip link set dev swp3 master br0
sw1$ ip link set dev swp11 master br0
sw1$ ip link set dev br0 up
sw1$ ip -6 address add 2001:db8:1::2/64 dev br0
sw1$ ip link set dev swp3 up
sw1$ ip link set dev swp11 up
sw1$ ip link set dev swp7 up
sw1$ ip link set dev swp7 up
sw1$ ip -6 address add 2001:db8:2::2/64 dev swp7
sw1$ ip -6 route add 2001:db8:4::/64 via 2001:db8:2::1
```

```
sw1$ cat /etc/keepalived/keepalived.conf
global_defs {
vrrp_garp_master_refresh 60
}
vrrp_instance vrrp_test {
 state MASTER
 interface br0
 virtual_router_id 5
 priority 200
 version 3
 advert_int 0.1
 use_vmac
 vmac xmit base
 virtual_ipaddress {
 2001:db8:1::100
 notify_master "/usr/local/bin/vmac.sh true br0 00:00:5e:00:02:05 1"
 notify_backup "/usr/local/bin/vmac.sh false br0 00:00:5e:00:02:05 1"
 notify stop "/usr/local/bin/vmac.sh false br0 00:00:5e:00:02:05 1"
}
sw2$ ip link add name br0 type bridge vlan_filtering 1 mcast_snooping 0
sw2$ ip link set dev swp55 master br0
sw2$ ip link set dev swp54 master br0
sw2$ ip link set dev br0 up
sw2$ ip -6 address add 2001:db8:1::3/64 dev br0
sw2$ ip link set dev swp55 up
sw2$ ip link set dev swp54 up
sw2$ ip link set dev swp56 up
sw2$ ip -6 address add 2001:db8:3::2/64 dev swp56
sw2$ ip -6 route add 2001:db8:4::/64 via 2001:db8:3::1
sw2$ cat /etc/keepalived/keepalived.conf
global_defs {
vrrp_garp_master_refresh 60
}
vrrp_instance vrrp_test {
 state BACKUP
 interface br0
 virtual router id 5
 priority 150
 version 3
 advert_int 0.1
 use_vmac
 vmac_xmit_base
```

```
virtual_ipaddress {
   2001:db8:1::100
}
notify_master "/usr/local/bin/vmac.sh true br0 00:00:5e:00:02:05 1"
notify_backup "/usr/local/bin/vmac.sh false br0 00:00:5e:00:02:05 1"
notify_stop "/usr/local/bin/vmac.sh false br0 00:00:5e:00:02:05 1"
}
```

In the above configuration, the virtual router uses an advertisement interval of 0.1 seconds. A longer interval can be used, but increases the failover time (the Backup router waits for three times the advertisement interval before declaring the Master as down).

The vmac_xmit_base option causes VRRP packets to be sent with the MAC of the underlying interface (br0 in the example) instead of the virtual MAC. (This does not conform to the VRRP specification, but is recommended in practice.)

On both switches vmac.sh is the file described below. The file ensures packets whose destination MAC is the virtual MAC are locally received by the Master router. An FDB entry is configured with the virtual MAC and the local flag.

Example:

Host Configuration

Example:

```
host$ ip link add name bond0 type bond mode active-backup miimon 100 use_carrier 1 host$ ip link set dev ens6 master bond0 host$ ip link set dev ens7 master bond0 host$ ip link set dev ens6 up host$ ip link set dev ens7 up
```

```
host$ ip link set dev bond0 up
host$ ip -6 address add 2001:db8:1::1/64 dev bond0
host$ ip -6 route add 2001:db8:4::/64 via 2001:db8:1::100
host$ ip link set dev bond0 type bond primary ens6
```

To avoid duplicate packets, the host uses an active-backup LAG to connect both switches. The virtual router (2001:db8:1::100) is the gateway to the 2001:db8:4::/64 network (although in actual deployments this usually is the default gateway).

The MAC address of the virtual router is the virtual router MAC (VMAC):

Example:

```
host$ ip -6 neighbour show 2001:db8:1::100
2001:db8:1::100 dev bond0 lladdr 00:00:5e:00:02:05 router REACHABLE
```

The LSB indicates that the virtual router ID is 5 (in accordance with the virtual router configuration above).

Appendix B – UEFI Implementation

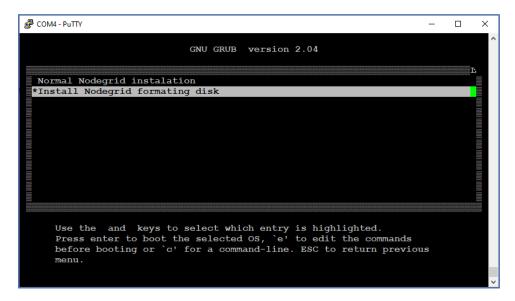

The latest UEFI specification defines an entirely new interface between operating system and firmware/BIOS.

UEFI Upgrade/Downgrade Concerns

Nodegrid OSes version 5.0 or below are Legacy Only, which means those images are not capable of booting in a system configured for UEFI Boot Mode. In a system running one of those images can be upgraded to new versions but will still run in Legacy. To Upgrade a Legacy device with a new image in UEFI mode, the following procedure is required:

- Burn an USB Drive with NG 5.X UEFI image
 Or setup a PxE Server with NG5.X UEFI Netboot Tarball.
- 2. During installation, select **Install Nodegrid formatting disk**.

3. After installation, change Boot mode to UEFI Mode. Login to OS shell as root and enter the following command:

/usr/sbin/hwec_cmds -boot_mode set uefi

4. Reboot the system.

Enable Secure Boot (optional)

WebUI Procedure

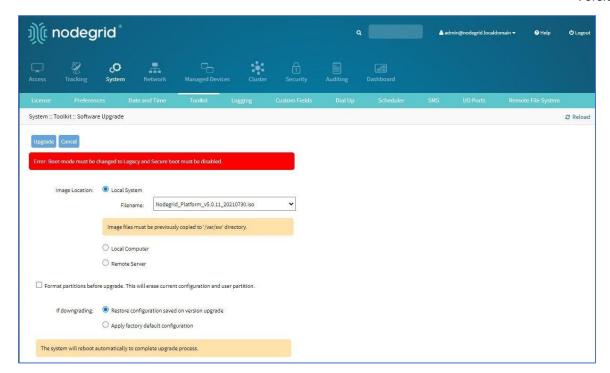

- 1. Go to Security :: Services :: Intrusion Prevention.
- 2. Select Enable Secure Boot checkbox.
- 3. Click Save.
- 4. Reboot the device.

Nodegrid OS version 5.1 and above are both Legacy and UEFI compatible.

Downgrade to Legacy

When in UEFI Boot Mode (optional Secure Boot), the device cannot be downgraded to Legacy Only. If a Legacy Image downgrade is necessary (v5.0 and below), disable Secure Boot and change to Legacy Mode. Then the downgrade procedure can be done.

- 1. Log into OS shell as root.
- 2. Enter:

```
/usr/sbin/hwec_cmds -secure_boot set 00
/usr/sbin/hwec_cmds -boot_mode set legacy
```

- 3. Reboot the system.
- 4. After that, proceed normally with the reboot.

Self-Encrypting Drive

Self-Encrypting Drive (SED) refers to SSDs with built-in full-disk encryption. The SED feature provides data privacy security against SSD theft. The customer can enable SSD data encryption, based on an authentication password. The Pre-Boot Authenticator is stored in SSD's Controller MBA and unlocks the drive during the boot process.

Minimum BIOS Versions

- NSR-COMP-EXPN (10518T00)
- NSR (10518T00)
- GSR (10617T00)
- LSR (10730T00)
- BSR (10813T00)

Device Conditions

- System's Boot Mode must be UEFI.
- Self-Encrypting Drive Pre-Boot Authenticator must be installed.
- After feature is enabled, a power cycle is required to activate.
- Lock Password is required to disable this feature.

Security Adjustments to System

- PxE Boot is disabled.
- Boot Order is set to SSD Only.
- When Password-and Protected Boot is enabled, use of Rescue Mode requires authentication.
- Secure Boot is strongly recommended.

Secure Boot

Secure Boot is optional in UEFI, but it highly recommended. It ensures software integrity on the device. A trust relationship is established between the UEFI BIOS and the device software (bootloaders, OS, UEFI drivers and utilities). When enabled, only software or firmware signed with approved keys can be executed. This guards the system against malicious attacks, rootkits, and unauthorized software updates that could occur prior to the device's OS launch.

The Secure Boot mechanism relies on public/private key pairs to verify the software's digital signature before execution. In the Secure Boot Standard Mode (default configuration), ZPE official public certificates are provided to validate Nodegrid OS images. To validate other device OS, the Secure Boot Custom Mode can use custom certificates installed in BIOS.

Requirements

- System's Boot Mode must be UEFI.
- Minimum BIOS version for Nodegrid devices:

NSR-COMP-EXPN (10518T00)

NSR (10518T00)

GSR (10617T00)

LSR (10730T00

BSR (10813T00

Intrusion Prevention

The Intrusion Prevention section allows configuration of preventive mechanisms (i.e., Fail 2 Ban, Rescue Mode) to prevent unauthorized access to a System. The following settings are available:

Intrusion Prevention Settings

Setting	Value	Description
Block host with multiple authentications fails	TRUE/FALSE	Blocks host from access after the maximum limit of failures occur.
Period Host will stay blocked (min)	Number in minutes	Amount of time the system is not reachable on the network (default: 10).
Timeframe to monitor authentication fails (min)	Number in minutes	Amount of time when failed authentication attempts maxed, and before the counter gets reset (default: 10).
Number of authentication fails to block host	Number	Number of failed authentication attempts before the user is blocked (default: 5).
Rescue Mode requires authentication	TRUE/FALSE	When enabled, Rescue Mode requires authentication through a local user account (i.e., root).
Password protected boot	TRUE/FALSE	When enabled, editing BIOS and Grub requires authentication based on the defined password.
Enable Secure Boot	TRUE/FALSE	When enabled, only ZPE-signed OS with ZPE standard certificates in BIOS are permitted to boot.
SED PBA Version	Read only text	Pre-Boot Authenticator Version installed in the SSD.
Self-encrypting drive	TRUE/FALSE	When enabled, all SSD data is automatically encrypted.
Lock password menu: Random Auto Generated	Radio button	Select to generate a ZPE random password.
Lock password menu: Random autogenerated	Radio button	Save the auto-generated Lock password.
Generated password	Read only text	Auto-generated Lock password. WARNING! SAVE THIS PASSWORD (Lock Password is required to disable this feature.)
User defined	Radio button	Enter user defined Lock password.
Lock password	Read only text	Enter Lock Password. WARNING! SAVE THIS PASSWORD (Lock Password is required to disable this feature.)
Confirm lock password	Read only text	Confirm Lock Password. WARNING! SAVE THIS PASSWORD (Lock Password is required to disable this feature.)

NOTES:

Password Protected Boot is a patent-pending feature that allows Nodegrid OS to communicate with BIOS to enable the BIOS password to prevent unauthorized changes. The same password also protects Grub from unauthorized changes.

The Password Protected Boot feature requires minimum BIOS version of 81122T00. On the WebUI, see *About* information for the current version.
