Application Note Pro-face with GP-Pro EX and GP-Viewer EX

6

This document guides you through the setup of proprietary vendor specific software installed on you PC. Your supervisor may provide you with additional or alternative instructions.

The document consists of standard instructions that may not fit your particular solution. Please visit our support website for latest revisions of documentation and firmware:

1. Prerequisite for this guide

The following guide will assist you to setup a remote and online connection to the Pro-face equipment placed on the customer site using the GP Pro EX, WinGP and/or GP-Viewer EX.

Prerequisites for this guide are:

- You have an operational LinkManager installed on your PC with a LinkManager certificate that allows you to connect to the SiteManager agents.
- You have the Pro-face panel and the GP Pro EX, WinGP and/or GP-Viewer EX software installed.
- You have the Pro-face / Ethernet device agent installed and configured on the SiteManager at the remote site, and there is access between the SiteManager and the panel.
- An USB attached panel (such as AGP3300 or the GP-4201T) must be configured with agent device type **Pro-Face / USB Adapter**. Note that this connection type requires a SiteManager model with USB support and minimum SiteManager version 13035 and LinkManager version 13025.
- Using GP Pro4.0 and USB attached device require SiteManager version 15123 to prevent Windows BSOD.
- Some GP4000 panels will work with the USB TypeA-MiniB cable but if you experience connection issue you should use the USB TypeA-TypeA cable from Proface (CA3-USBCB-01) – this will also enable the Monitor feature GP-Pro.

System Overview

The communication path is as follows:

GP software \rightarrow **LinkManager** \rightarrow GateManager \rightarrow SiteManager \rightarrow Panel.

This guide will elaborate on the components marked with **bold**.

The following system overview depicts a SiteManager 1029 at the customer location.

The procedures in the following apply to any SiteManager model.

2. Setting the IP address in the Pro-face panel

If you are using USB to connect to the panel, you can skip this part, and go directly to **3** Connecting to the Panel with LinkManager.

If the Panel already has an IP address, you can jump to the next section. The following explains briefly how to set the IP address on the panel.

1. Power up the panel and enter offline mode. This is the only way you can type in the IP address.

- 2. Perform the following steps in the offline menu:
 - a. Enter <Main Unit Settings>.
 - b. Enter <Ethernet Local settings>.
 - c. Type in the display IP information.
 - d. Press <Exit>, and the settings will be saved and panel reboots.

Screen Settings	Op Se	eration ettings		Disp Sett	lay ings	Err	Menu ar or Sett	nd Lings	Window Settings

		Exit					Back	[2006/05/22 02:02:16

Page 4 of 13

3. Connecting to the Panel with LinkManager

1. Login with your LinkManager account and locate the agent that represents your TCP/IP or USB attached panel. Click the text (that turns orange at mouse over) to connect to the panel.

2. For USB connection: You should see 2 OK connects in the counter. This indicates that the LinkManager has established a connection to the USB device.

For Ethernet connection: You will not see any activity on it yet. This only starts when you connect to the Panel with your GP software (Make a note of the IP address of the Panel):

KM mea	lar	nager								h
		ROC	Disconnect Logout Disconnect Logout	Servio	ces omerF.l	Sniffe Productio	r n Plant :	L		
			Pro-face Panel (SiteMa	anager) -	192.16	8.1.30				
		Agent	Address	Status	Con	nects	Pac	kets	By	tes
		Agent	Address	Status	ok	fail	tx	rx	tx	rx
@*	8	Pro-face Panel	192.168.1.30:80,8000-8019	IDLE	0	0	0	0	0	0
			:21	IDLE	0	0	0	0	0	0
			:8000-8019 (udp)	IDLE	0	0	0	0	0	0
	-		PC-Vision	IDLE	0	0	0	0	0	0

Hint: You are now connected to the Panel, and you could make a ping to the Panel's IP address

3. Continue with the next section to go online with the Pro-face GP software.

Page 5 of 13

4. Connecting with Pro-face GP software

While connected with LinkManager, start either GP $\ensuremath{\mathsf{Pro}}\xspace$ EX or GP Viewer EX.

Important:

- Using GP Pro4.0 and USB attached device require SiteManager version 15123 to prevent Windows BSOD.
- Some GP4000 panels will work with the USB TypeA-MiniB cable but if you experience connection issue you should use the USB TypeA-TypeA cable from Proface (CA3-USBCB-01) – this will also enable the Monitor feature GP-Pro.

4.1. Online with GP Pro EX (USB)

1. In the transfer tool, press the **<transfer settings>**. Set the Communication Port Settings to USB, and click OK.

📬 Transfer Settings	
Transfer Settings Site Transfer Setting	s)
Communication Port Settings	Transfer Project Automatic Retain retentive variables All
	Transfer System • Automatic • Forced
 Transfer Enhanced Recipe Data Transfer CF/SD card data Transfer Site Data 	
	OK Cancel

2. Start the transfer from transfer tool by pressing <Send Project>

		<		>	

3. Select the IP address and you are online with the panel.

Page 10 of 13

5. Ethernet connection via WindowsXP under VMWare

You can run the GP software inside a VMWare engine, to an Proface panel that is Ethernet attached to a SiteManager.

You can choose to run the LinkManager inside or outside the virtual machine. Note that LinkManager can only run inside VMWare if the host OS is Windows 7 and the PC's CPU has support for virtualization.

The following illustrates VMWare Player, which can be downloaded from http://www.vmware.com/support/product-support/player/, and for LinkManager running outside the virtual machine (i.e. on the host OS system)

1. Locate your WindowsXP that has the GP software installed, and enter **Edit** virtual machine settings.

😵 VMware Player File + VM + Help +	- ×
Home	
Windows XP Professional 2	
	Windows XP. Professional 2
	Windows AF Professional 2
	State: Powered Off
	OS: Windows XP Professional
	Version: Workstation 5.x virtual machine
	RAM: 1024 MB
	Play virtual machine
	🔫 🖉 Edit virtual machine settings
	Firmuran
	U Milware

Page 11 of 13

2. Make sure the Network Adapter settings is set to NAT:

Device	Suppose	/ Device status
Memory Processors Hard Disk (IDE) CD/DVD (IDE) Floppy	1024 MB 1 8 GB (Preallocated) Auto detect Using drive A:	Connected Connect at power on Network connection Bridged: Connected directly to the physical network
Serial Port	Present Using port COM6	Replicate physical network connection state NAT: Used to share the host's IP address Host-only: A private network shared with the host

3. Start the VMWare engine and on the host PC start LinkManager.

Follow the procedure of section **2. Setting the IP address in the Pro-face panel** to get access to the Panel via LinkManager
