Documentation Article for SDK Release 3.8.1

Introduction: SDK version 3.8.1 includes key fixes and improvements that address issues from previous releases, specifically around multi-tenant functionality. This article provides a detailed overview of the changes in this release, including features, bug fixes, and improvements relevant to multi-tenant apps. Below, you will find a brief summary of the main updates, with the option to access more detailed information on each one.

Key Features and Fixes in SDK 3.8.1:

- **Multi-Tenant App Fix:**
    - This release resolves a bug that was introduced in version 3.7.5 affecting multi-tenant apps. It corrects navigation issues that impact venues and teams using multi-tenant configurations.
    - Prior to this release, the introduction of a host login feature caused issues with navigating between tenants (e.g., teams or venues). This fix restores the previous functionality, ensuring seamless navigation between multiple tenants.
    - **No additional configuration or dependencies required.**
- **Swedish Translations Update:**
    - This update includes enhanced support for Swedish translations, ensuring full compatibility with apps targeting the Swedish market.
    - **Only relevant for apps built for the Swedish market.**
- **Spanish Translations Update:**
    - The release improves translation capabilities for apps built for Spanish-speaking users. Apps targeting the Spanish market will benefit from improved localization features.
    - **Only relevant for apps built for the Spanish market.**
