## Item functions

Buttons	
	<p>Create new item to Sovelia</p> <p>Creates a new item with given attributes and revision (number or letter) to Sovelia . Fail message if item already exists or if the user does not have proper privileges to create item</p>
	<p>Create new revision to Sovelia</p> <p>Create new item revision with given attributes and revision (number or letter) to Sovelia . Fail message if item revision already exists or if the user does not have proper privileges to revise item</p>
	<p>Put item's attributes to Sovelia</p> <p>Put attribute values to corresponding Sovelia item revision. Fail message if item revision's status in Sovelia prohibits modifications or if item revision does not exist in Sovelia</p>
	<p>Get item's attributes to Sovelia</p> <p>Get attribute values from corresponding Sovelia item revision. Info message if NEWER revision exists in Sovelia . Fail message if item revision does not exist in Sovelia.</p>
	<p>Search and get item from Sovelia</p> <p>Search and get item number and related attribute values (newest revision) from Sovelia .</p>

## Item Settings

Default settings for item functions	
<b>Source for new Item Numbers</b>	Sovelia : number is always generated by Sovelia. If number field is not empty, user is asked to cancel or to get new number  CAD : number is always feed to Sovelia from Number field. If Number field is empty, operation is canceled.  Both (default): If Number field is empty, then Sovelia generates the number. If Number field id not empty, then user is asked whether to use the number in field or let Sovelia generate a new number
<b>Item status when created from CAD</b>	In Design
<b>Item status when updated from CAD</b>	In Design
<b>Item status when revised from CAD</b>	As is (current status remains)
<b>Revision scheme</b>	1,2, ...
<b>Initial revision</b>	1

## Item attributes

Item attributes, typetree, and name dictionary are defined in Sovelia from where the CAD add-in reads all definitions and builds the corresponding UI elements dynamically.

Item attributes are mapped to appropriate CAD custom properties (SolidWorks) / parameters (Creo) in CAD add-in settings. The following tables shows the default mapping.

Item standard attribute - CAD property/parameter mapping	
Item attribute	CAD property/parameter
<b>Item number</b>	Code
<b>Revision</b>	Revision
<b>Revision description</b>	Revision_Description
<b>Type tree</b>	Typetree
<b>Description</b>	Description
<b>Name Id</b>	Name_Id
<b>Name language versions</b>	Name_En, Name_Fi

Item custom attribute - CAD property/parameter mapping (demo Sovelia)	
Sovelia custom attribute	CAD property/parameter
<b>Additionaldesc</b>	Additionaldesc
<b>Itemtype</b>	Itemtype
<b>Sparepart</b>	Sparepart
<b>Unit</b>	Unit
<b>Standard</b>	Standard
<b>Customer</b>	Customer
<b>Surfacetreatment</b>	Surface_Treatment

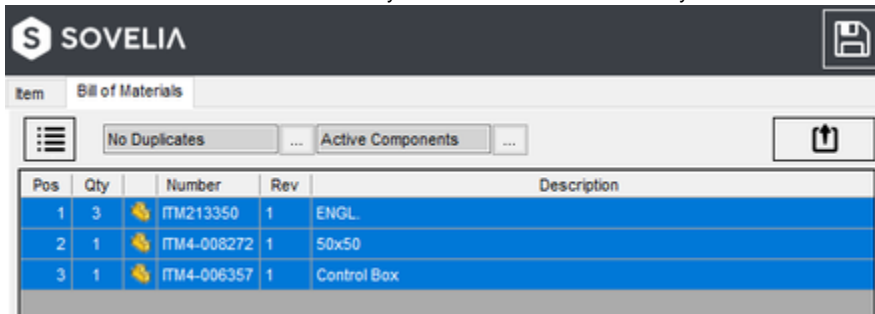

## CAD model properties

CAD model properties section is not necessarily needed by the integration. It just provides user with handy way to manage CAD model properties. Following table introduces some out-of-the box fields. In addition ootb fields, custom input fields and automation can be defined for any custom property (SolidWorks) / parameter (Creo). CAD model properties section is fully customizable.

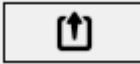

CAD model properties	
<p>Weight (kg) <input type="text" value="1,768056251"/> </p> <p>Weight (kg) <input type="text" value="2"/> </p> <p><b>Weight</b> Calculated / user defined</p>	<p>Add-in controls weight value by utilizing CAD's native functionality. Integration updates the Weight value to Sovelia.</p>
<p>Rename model (and drawing) <input checked="" type="checkbox"/> <input type="text" value="ITM4-008595"/></p> <p><b>Filename</b> automation</p>	<p>User can control if CAD model is named according to the item number or some customized rule.</p> <p>SolidWorks: drawing file, with equal name and saved in same folder with the model, is copied to new name as well. Creo: drawing file, in Creo session having equal name with the model, is renamed as well</p>
<p>Material <input type="text" value="Plain Carbon Steel"/></p> <p>Part's <b>material</b> properties</p>	<p>Material definition that is connected with CAD material library. This is not integrated with Sovelia by default.</p>
<p>Color <input type="text" value="RAL 1000 Green Beige"/></p> <p>Model <b>color</b></p>	<p>Sets the 3D model's visual color. Add-in includes own color library. This is not integrated with Sovelia by default.</p>

## Bill of Materials

Bill of Materials sheet tab is available only for SolidWorks/Creo assembly.

Pos	Qty	Number	Rev	Description
1	3	ITM213350	1	ENGL
2	1	ITM4-008272	1	50x50
3	1	ITM4-006357	1	Control Box

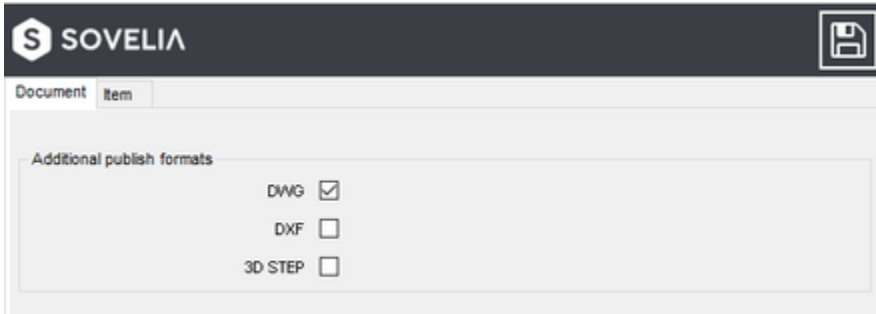

BOM function	Description
 Set Pos value	Sets value(s) to Pos column for user selected BOM members.
<input type="text" value="No Duplicates"/> ... No / Show Duplicates view	<i>No Duplicates</i> view sums identical component instances into same BOM row (QTY >= 1). <i>Show Duplicates</i> shows all component instances i separate rows (QTY =1)
<input type="text" value="Active Components"/> ... Active / All Components view	<i>Active Components</i> view shows only active component instances. <i>All Components</i> view shows also suppressed components in the BOM list
 Put BOM to Sovelia	Update BOM to Sovelia. Fails message if any BOM member is missing Item number or Rev

Columns in BOM view	Description
---------------------	-------------

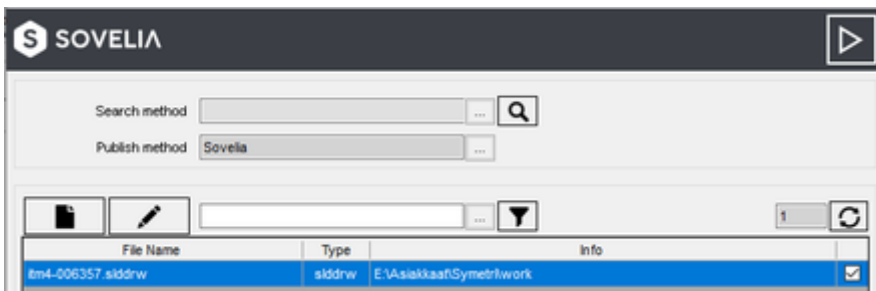

<b>Pos (Optional)</b>	BOM member's position Creo: mapped to <i>LINENUMBER</i> component parameter SolidWorks: mapped to <i>Component Reference</i> property
<b>Qty</b>	Quantity of BOM members
<b>Number</b>	BOM member's Item number
<b>Rev</b>	BOM member's revision
<b>Description</b>	BOM member's Description
<b>?</b>	One custom column showing BOM Members custo property/parameter can be added

## Document

Document sheet tab is available only for SolidWorks/Creo drawing. Document sheet is optional to have and the content is configurable.

## Publish Documents

Publish Documents makes the file conversions for drawing (and 3D model) and uploads to Sovelia as documents.

Integration and file conversion options:

Primary publish format	
PDF	<p><b>Integration defaults</b>  Document number: Item number-PDF  Revision: Item's revision  Status: In Design  Description: Item's Description  Class: Drawing class  Type: Documents,Drawing  Link: Item-Product document relation</p> <p><b>PDF conversion options</b>  Sheets: All sheets  Other conversion defaults varies by CAD versions</p>
Additional publish formats	

DWG	<p><b>Integration defaults</b>  Document number: Item number-DWG  Revision: Item's revision  Status: In Design  Description: Item's Description  Class: Drawing class  Type: Documents, Drawing  Link: Item-Product document relation</p> <p><b>DWG conversion options</b>  Sheets: All sheets  Other conversion defaults varies by CAD versions</p>
DXF	<p><b>Integration defaults</b>  Doc number: Item number-DXF  Revision: Item's revision  Status: Ready  Description: DXF  Class: Document class  Type: Documents, CAD export files  Link: Item-Doc relation</p> <p><b>DXF conversion options</b>  Sheets: Last sheet  Other conversion defaults varies by CAD versions</p>
3D Step	<p><b>Integration defaults</b>  Doc number: Item number-STP  Revision: Item's revision  Status: Ready  Description: STEP  Class: Document class  Type: Documents, CAD export files  Link: Item-Doc relation</p> <p><b>STEP conversion options</b>  conversion defaults varies by CAD versions</p>
