Softera.DDMRP

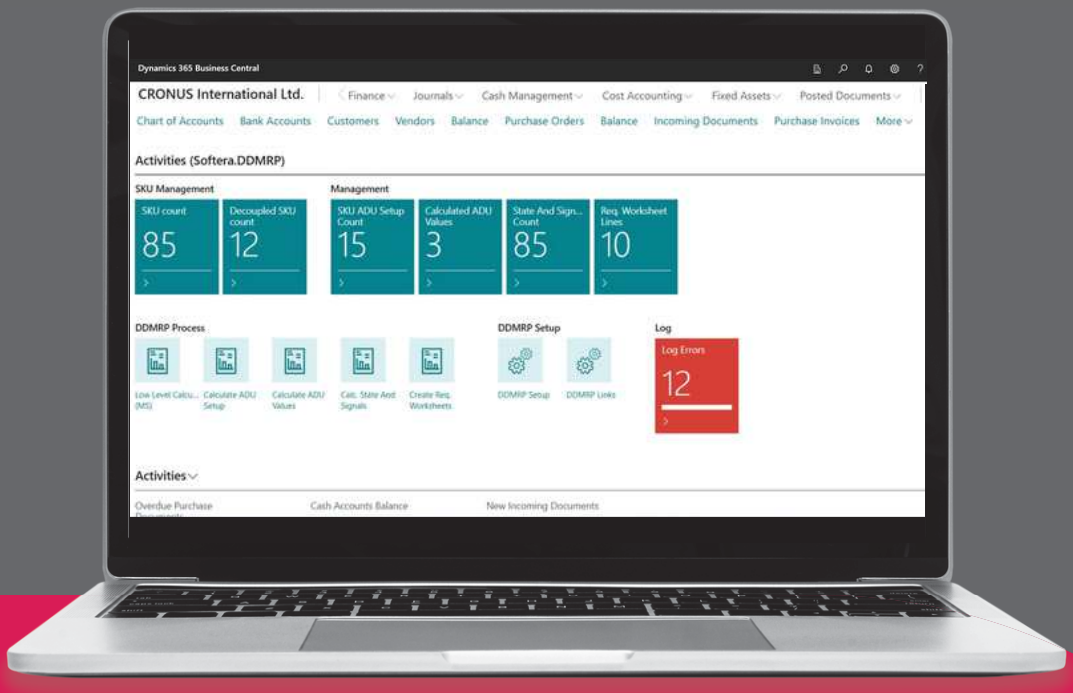

Smart DDMRP inventory planning for
Dynamics 365 Business Central manufacturers

Softera.DDMRP

Softera DDMRP Planner is an intelligent inventory and supply planning solution built natively for Microsoft Dynamics 365 Business Central. Designed for manufacturing companies operating in volatile demand environments, it helps you plan and replenish based on real market needs—reducing excess stock, avoiding critical shortages, and improving delivery reliability.

Why Softera DDMRP Planner

Traditional MRP often depends on historical data and fixed forecasts, which can lead to overproduction, stockouts, and constant firefighting when demand changes. Softera DDMRP Planner applies Demand Driven Material Requirements Planning (DDMRP) principles to keep materials flowing smoothly from raw components to finished goods, even when sales patterns are unpredictable.

Key value and benefits

Demand-driven planning (DDMRP)

Inventory levels and replenishment signals are aligned with actual demand, not just past trends.

Native Business Central integration

Works as a seamless extension of Dynamics 365 Business Central—no extra systems or complex interfaces required.

End-to-end material flow control

Better synchronization from suppliers through production to final products, with fewer delays and disruptions.

Lower inventory risk

Reduce overstocks, minimize obsolete inventory, and prevent critical shortages that stop production.

More efficient planning work

Simplifies daily tasks for production planners and purchasing teams, enabling faster and clearer decisions.
