## Introducing Alerts: Stay Informed

### See what's new, with updates delivered in-app!

To make sure pertinent people are in the know, Steelhead will soon be delivering important messages, product updates, and documentation as pop-up dialogs or banners within the platform. With these announcements, you can expect:

- **Instant Communication:** Receive critical updates instantly, sent only to relevant users
- **Easy Access to Information:** Easily view past notifications along with applicable links to step by step documentation and videos
- **Join the Conversation:** Provide feedback to Steelhead on individual alerts, contributing your perspective and thoughts on how we're doing

Stay informed and empowered with Steelhead's new in-app Alerts—delivering timely updates, product information, and essential documentation directly within the platform, so you never miss what matters most to your production floor.

## Product Update Highlights

### Spec Review and Sign Off

To ensure quality, verify compliance with customer and industry standards, and help prevent costly rework by identifying issues before final completion, a Part's specification results may now be reviewed and signed before allowing the Part to continue through production.

To enforce a sign off on Spec values by key team members, users may now be assigned to a Quality Assurance Node. Use these two new Domain settings:

- **Enable Spec Value Sign Off**
- **Require Spec Value Sign Off**

Ensure top-quality parts for every customer. Experience how this update can elevate your workflow today! View documentation here.

### Reminder: Sonar Just Released

Steelhead's AI Chatbot, 'Sonar', is available to assist users with various aspects of the platform, including finding instructions, definitions, and getting navigational help with Steelhead. This can save time by offering instant answers to questions, 24/7.
