The Weekly Catch

Product updates, feature releases, news mentions, and more...

Check out the new features below and don't forget to reach out to us if you are attending **Powder Coating Week** in Orlando!

Customer Spotlight

Commercial Powder Coating is a few weeks into its digital transformation with Steelhead! Please join us in welcoming them to the Steelhead family. **Here is what their Operators had to say:**

Feature Showcase

Receive Customer Parts from the Receiving Dashboard!

If you've ever found customer parts dropped off at your plant and scratched your head over what order they belong to, the new Receiving Dashboard updates were created with you in mind.

View and manage customer parts and inventory items delivered to your plant from a single screen, from anywhere with an internet connection.

Think of the "Customer Parts" tile on the receiving dashboard as a digital holding bin for customer parts. Sometimes parts come complete with customer and order information. Sometimes, they don't. The receiving dashboard allows you to check the parts into the system without requiring you to have all of that information on hand or commit them to a specific process.

All that's required to receive parts is a part number and a quantity. These can also be adjusted later, if necessary. Add as much or as little other information as you are able - the receiving dashboard is flexible to your needs.

Customer, order, quote, and other information can all be added later. Part numbers can even be changed, if they are misidentified or given a placeholder name at the time they are received.

Check out our user documentation on the receiving customer parts.

WORK ORDER PHOTOS

Steelhead now supports the ability to view multiple work order photos from workboards. You can even flip through multiple photos from the work parts screen!

STATION SCHEDULING

Schedule work, tasks, and maintenance on stations from a calendar view. See scheduled dates on work orders from workboard screens!

This is not a full list of product updates.

Welcome Our New Partner!

SURFACE TREATMENT & TECHNOLOGIES

Calvary Industries, llc.

Welcome Our Newest Partner!

Calvary Industries manufactures a variety of pre-treatment options, notably zirconium pretreatment and the CALeye 2.0 pretreatment monitoring and autodosing solution.

Being a chemical manufacturer, Calvary Industries also has the ability to tweak the chemistries to apply the right tool for the job.

High-Level Advantages:

- No phosphate or phosphate sludge in tanks or risers
- Superior corrosion resistance
- Lower temperature in stage 1 (saves energy)
- Only one heated stage (saves energy)
- Very low conductivity in stage 4 (easier rinsing/less bath dumps)
- Dumped to drain because of low conductivity and green chemistry
