FRESH FEATURES
Weekly Product Updates

Updates to the Steelhead Chat Feature

Steelhead Chats can now be seen on any page!

The Steelhead Chat feature is now a floating chat that appears as a tab in the lower right corner of any page. With this new floating chat, you can:

- Edit your text with Bold, Italics, and Strikethrough
- Send Links
- Mention/tag a coworker
- Send emojis
- Link the current page you're on

You can still access the main Chat page by clicking on the Tab icon at the top of any Channel.

You can also pin high importance or high traffic Channels to keep them listed above other Channels.

See updated Chat instructions here.

We hope you find this feature to be useful for communicating within your shop!

Please reach out to your Customer Success Manager or email us at support@gosteelhead.com with any questions!

Steelhead University's First Spanish Course:

"*Entrenamiento del Operador*"

Ensure your *whole* team knows how to use Steelhead effectively!

The "Operator Training" Course in Steelhead University is now available in Spanish! This course introduces the software and teaches employees how to use features correctly and efficiently. The "Entrenamiento del Operador" course provides Spanish-Speaking users:

- An overview of the general functions of Steelhead
- An abundance of helpful videos and examples
- Straightforward directions about operator-specific duties

We hope this provides your Spanish-Speaking operators all the tools to succeed when using Steelhead on the production floor!

To enroll yourself or your team in Steelhead University, email
 learn@gosteelhead.com.

November Masterclass *"Workboards"*

Join us in the next Steelhead Masterclass!

In the next webinar coming up on November 20th, you will learn how to:

- Create and set up Workboards
- Create Workboard cards
- Navigate a Workboard and use it efficiently

Product Update Highlights

Track Costs on Maintenance Events

Added the ability to track Labor and Inventory Depletion for Maintenance Events in order to gain insight into overhead costs.

Station Prioritization Enhancement

The Station Prioritization has been updated to improve user experience.

Part Number Geometries

Part Number geometry types can now drive Spec field parameterization per Part Number.

Change Part Location at Any Process Step

An update to the Move Parts dialog allows for unique location selection when moving Parts.

Recipe Editor Icon

Added an Edit Process Tree icon to the Work Orders table within a Sales Order to access the Recipe Editor.

Workboard Work Order Count

At the top of each Workboard Card within a Workboard, users will now see a count of how many Work Orders are on that Workboard Card.
