## FEATURE UPDATE: Multi-Plant Capability

Steelhead now supports the operation of multiple plants from a single account. This simple yet powerful enhancement allows you to easily manage all aspects of your company's business. All plant data is now accessible to administrative users from a single portal, allowing you to streamline your data and optimize managerial time.

STEELHEAD LOCATION DESIGN

Devices assigned a Global location see all information in the company domain.

Devices assigned a Plant location see all information for a specific plant, but not information from other plants.

Devices assigned to a location within a plant can only see information for the location(s) within the plant that they are assigned to.

GLOBAL

Plant A

Plant B

Plant A Kitchen 1

Plant A Kitchen 2

View progress on work for multiple plants without the need to call for progress reports from managers at other sites.

User accounts and devices can be set to a specific plant, or to a global view. Use the plant-specific view to see infornation for one individual plant. Administrators with full privileges have the option to use the **Global View** to see activity and information for all plants. Once a device is signed into one plant, it will always default to that plant for future sessions.

The gear icon on the home screen allows you to change your device location. The location that your user account is logged in to is visible in the top left corner of your screen. Locations can be created and manages from the "Locations" tile on the Steelhead home page.

Check out our user documentation for more info about this powerful new feature:

- Assigning Items to Locations
- Creating and Managing Locations
- Locations
- Location-Specific and Global Views

STATION CALENDARS

Allow scheduled time on station calendars to support capacity planning, and scheduling, while improving lead time length and accuracy.

VIEWS ENHANCEMENT

The option to **View Next** and **View Previous** buttons on workboard pages allows easier navigation between workboards.

HIDE UNLABELED ORDERS

Workboards now include the option to hide unlabelled work orders; this allows operators to see only work orders with specific labels if they choose.

FILTER IMPROVEMENTS

Searchable and filterable columns on pages including tables now show a filter icon to allow filtering by that column on the table.

This is not a full list of product updates.
