Updates and information you don't want to miss!

Product Update: Invoicing v2.0

We recommend switching to Invoicing v2.0 today for the optimal Steelhead Invoicing experience!

Invoicing v2.0 provides several major improvements. Loading speed and response time are dramatically improved. The time of the last accounting sync is displayed, meaning that you'll never have to go back to the domain page to see when the last sync took place. Filters and paged results allow for a cleaner, faster overall experience.

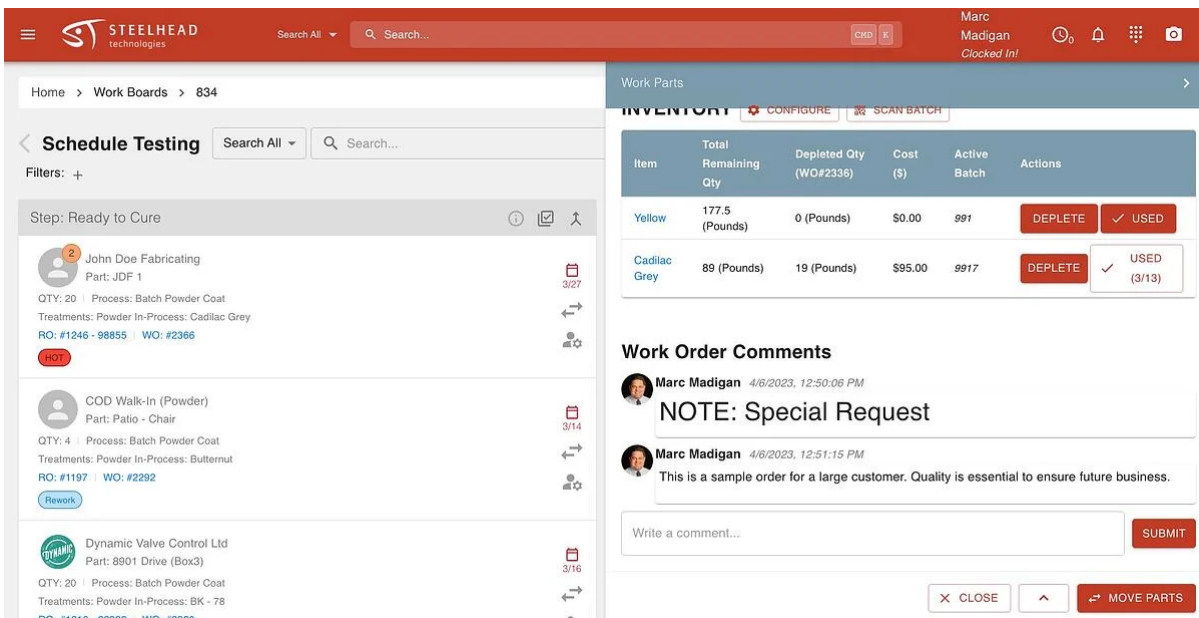

There are lots of reasons to switch to Invoicing v2.0. Being able to see the time of the last accounting sync directly from the Invoicing page is just one of them.
