

# Asset and Insurance Tracking Module

The Bryt Software Asset and Insurance Tracking Module maintains information for asset-defined lending programs.

The Asset and Insurance Tracking system enables you to manage collateral and reduce credit risk by ensuring that loans are adequately secured and properly documented.

The Asset and Insurance Tracking system provides the following benefits for lenders:

- Delivers a cost-effective, time-saving method for tracking any kind of loan documentation or collateral.
- Helps lenders determine which loans are under-collateralized.
- Helps lenders comply with regulatory requirements.
- Notifies you and the borrower when an insurance policy is expiring

It helps you better manage collateral, and in turn, helps you save time and money.
