

User Administration

Bryt configuration offers the following levels of permissions:

- **Admin User** – The Admin user has all the rights of a standard user, plus the rights to administer company wide settings for your Bryt instances. These settings include Company Details, Email Settings, Notices and Users. Additionally, the Admin user will have rights to configure any additional modules that are included with your Bryt instance.
- **Standard User** – The Standard User has access to dashboard, contacts, loans, reports and personal profile settings.
- **Custom User** – The Custom users is configured by Bryt support personnel based on your specific company requirements. Depending on your requirements, custom user configuration may involve additional implementation expense.

The default read/write setting for all users is full read and write access to all records within your Bryt instance. Restricting user read write access may require additional system configuration.

The following chart describes the User Permissions available based on Bryt product version:

	Loan Tracking Personal & Business	Loan Tracking - Professional	Loan Servicing	Loan Origination
Admin User	Included <i>(Single user only)</i>	Included	Included	Included
Standard User	Not Available	Included	Included	Included
Custom User	Not Available	Not Available	Available as a customization	Available as a customization
