

Release Notes – 1.5.0

07/25/2017

VERSION

1.5.0

The following feature enhancements and bug fixes have been applied as a part of the Narrative1 version 1.5.0 release on 07/25/2017

Bug Fixes and Usability Improvements

Record Mgmt.

Fixed: Importing Comps with Duplicate Property Names

A bug prevented comparables with duplicate property names from being imported into Excel from N1-Web. In the case of comps with a shared property name, only the first record would import. This issue has been addressed; all comps now import correctly, including those with a shared property name.

Fixed: Historical Sales Data

When duplicating comps, a bug sometimes prevented historical sales from being copied over. This issue has been resolved.

Fixed: Exporting to Excel

Exporting Job sets with more than 50 records from N1-Web to Excel caused the page to freeze. It is now possible to export up to 1000 records to Excel without issue. There is no upper limit when exporting to PDF.
