

**RIMS®**

Release Notes – 8.28.0

May 12, 2022

**RIMS®**

VERSION

**8.28.0**

Real Estate Information Management System (RIMS)  
Version 8.28.0 is a release for all RIMS 8 users.

These Release Notes provide a summary of selected bug fixes and performance improvements for the following noted areas:

## QUALITY & USABILITY IMPROVEMENTS

### Award

#### **Cancelling an Award and Inability to Save RFP Resolved**

Issue was resolved where user was not able to successfully save the RFP after cancelling an award.

### Batch Invoice

#### **Vendor Job Manager Uploading a Second Invoice**

Issue was resolved where a Vendor Job Manager uploading a second invoice to a task was wiping out the payment of the prior invoice.

### Bid Authorization

#### **Bid Authorization Throwing Error and Won't Send**

Issue resolved to accommodate a larger number of properties and bids.

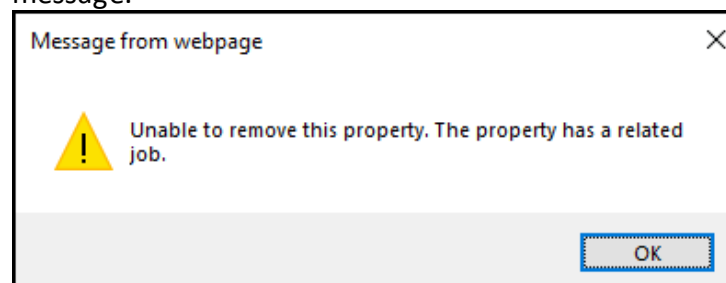

#### **View Bids Page Returns Error**

Issue was resolved where vendors were submitting the bid delivery date with a timestamp.

### Property

#### **Account Officer Deleting Properties**

Account Officers were deleting properties when sent back for insufficient data. Issue was resolved so that the Account Officer cannot remove the property when there is already a job associated with the property. The Account Officer will receive an alert message.

## Quick Access

### Network Failure Message During Download

Issue resolved where quick access users encountered a network failure message during the download of a file.

## Reports

Assigned Projects Only - Download/Upload on open/completed/cancelled jobs (when LP JobAttachPrefCompletedEnabled is enabled)

Affected area: only vw User Details and any other views attaching to this view on Adhoc reports.

Added Task Status field to Project / Job /Task / Property View

### **Detail Performance Report**

Issue was resolved where no results were returned for the Detail Performance Report due to the length of the hold description.

### **Export Users**

Issue was resolved where the Export Users Report for vendor users with advanced column selection returned an error.

## **SAML/Single Sign-on**

### **Auto-Provisioning**

When auto-provisioning is enabled, new users are not auto-created for the user type if their credentials match existing accounts that are inactive/locked out. The user will get the following message when that is the case: "User account's Login Status is not Active. Please contact your system administrator for assistance."

When SSO configuration for ForceUpdateAttributes is enabled, if a matching user account is in a Locked Out status, the account will be unlocked. A change log entry will be added for that event. The user will proceed to log in with that account.

## **Service Request Form**

### **Resubmit Services**

Resolved issue where user was unable to resubmit services based on a configuration setting.

### **Fields Available in Additional Requirements for a Service**

Added logic to allow required fields from the base service page to be selected for inclusion in the service type. The user will not be able to override the field requirement dictated on the base service page.

**Unpaid Tasks****Unpaid Third-party Tasks Not Transitioning to Closed**

Added new configuration to handle customers who need the tasks involving specific or any service provider to transition to Closed rather than Unpaid.
