Release Notes – Addendum Overview

CobbleStone Software's Contract Insight addendum to application release notes are meant to assist our clients and users in obtaining a high level or overview understanding of the new features, enhancements and issue resolutions associated with each patch release version of the application.

Release Version Information
The high-level information regarding this version is detailed below:

Release Version Number	Client Release Date	Release Type *(from prior release)*
17.5.3	Wednesday February 26, 2020	Patch

Version Numbers, Segments & Types
The initial questions most users ask are:
- What exactly do the version numbers mean?
- What does the release type mean?

CobbleStone Software's development of Contract Insight follows an industry standard for naming and numbering consisting of **four (4) segments of numbers**, separated by a period. When a new release is deployed, its release type is determined based on what changes, enhancements, issue resolutions or new functionality is included with the new release.

Below is a breakdown of the release version number and release type with these items in mind.

1 First Segment:
The first segment represents the ***system or application number***. This number only changes if there is a major overhaul to the system or application on a whole.

A release altering this segment is an **upgrade** release type.

2 Second Segment:
The second segment represents a ***new major functionality release***. This number only changes if there is new functionality or major enhancements to multiple areas of the system/application.

A release altering this segment is an **update** release type.

3 Third Segment:
The third segment represents the ***revision or patch number***. This number changes with each new released version. The revision or patch refers to a release centered on minor enhancements and issue resolutions.

A release altering this segment is a **patch** release type.

Core System: Contract Insight

The Core System provides Contract Insight's core components and functionality for full lifecycle management of your organization's contracts and committals.

➤ **Resolution: Filtering an Ad-Hoc report to limit results based on specific user running the report**
Reference #: 22620.439.1270

When creating an Ad-Hoc report, some users were unable to add a Filter/Condition that would limit the results to the specific user Viewing/Running the report. A fix was applied so that now the report builder can select *User Performing Action* from the dropdown of affected fields.

➤ **Resolution: Copied Ad-Hoc reports Filters/Conditions unable to be updated**
Reference #: 22620.337.1272

Filters/Conditions on a copied Ad-Hoc report were blank, grayed out and unable to be modified. Issue resolved so that the Filter/Conditions can be modified on a copied Ad-Hoc report.
