

Care Notes

Generations Homecare System

Care notes in Generations are a great way to securely things such as care coordination and progress towards goals for clients. Using Care Notes can help your agency further ensure quality care and compliance. System administrators also have the ability to require care notes for caregivers if they choose to do so.

Here's how to set up Care Notes:

- Create the care note.
- Establish limits, such as the length of allowable time for a Care Note to be submitted after a shift has been completed.
- Set care and wound note permissions.
- Review the care notes reports to confirm details and to ensure nothing is missing.

Care notes in Generations can be used for many aspects of care including companion care notes, home safety evaluations, pediatric evaluations, skilled nursing notes, and much more.
